ProDoc® Document Assembly Software

Software Manual

Version 5
Thank you for choosing us as your solution for automating your practice to save time, reduce errors, and better serve your clients.

So you can reap the most benefit from ProDoc, the following services are standard with your subscription:

* Automatic Updates - We continually enhance ProDoc software and our form templates. We send you these updates at no charge several times each year and particularly before new legislation takes effect, so your ProDoc-generated documents are always current with the law.

* Toll-Free Technical Support - Feel free to call our Customer Service Center at 800.759.5418 for any questions you may have regarding the software. We particularly encourage you to call us when you’re ready to install ProDoc on your network.

Finally, visit www.prodoc.com/internet-site/support/overview.asp to view our FAQs, hours of operation, and other helpful information.

Many of our subscribers report that ProDoc pays for itself many times over through increased productivity and reduced error rates. Based on our experience, you’ll discover ProDoc’s benefits when you and your staff overcome your natural reluctance to change from your comfortable, but inefficient, way of generating documents to the new, and more efficient, ProDoc way.

That’s why I encourage you to make the time to take advantage of our free training; it will be one of the best investments you and your staff will ever make in your practice.

For more product information, please call ProDoc at 1-800-759-5418 or email us at sales@prodoc.com.

Software Manual Introduction

Overview of this Manual

Navigating Through This Manual

Click on the blue highlighted text links throughout the manual to jump to a topic or get more information.

Click on the back arrow at the bottom of your screen, , or press Alt + Left Arrow on your keyboard to return to your previous view. If you scrolled or linked more than once, you will need to do this more than once to return to where you started.

Click on topic titles listed in the Table of Contents to jump to the indicated topic.

You can also use the bookmarks provided in the Adobe navigation pane to pick the topic you want to see.

Quick Links to Each Program's Section

The ProDoc Program is the primary program used for document assembly. PowerPack programs, specific to each state we serve, are available as additional subscription items. These programs are designed to work with ProDoc and significantly increase your productivity. These programs allow you to enter information in your clients' case files and manage the information quickly and efficiently. If calculations are necessary, the program makes them and inserts the results wherever they are needed. The information you enter is saved in ProDoc data files for future use.

You can click the blue links below to jump to the sections of this manual which describe the processes and features of different ProDoc programs.

ProDoc Program - Covers all major program functions and includes appendices on network considerations, ProDoc's internal operations, linking your ProDoc data with Timeslips and creating your own supplemental forms.

Texas Family Law PowerPack Programs

Other Reference Material

The following documents are stored in your ProDoc home directory in a folder named "Documentation", along with the manual.

ProDoc Quick Reference Card - This document gives you procedures for major ProDoc functions, short and to the point, on two pages.

ProDoc Quick Start Guide - This document is the electronic version of the pamphlet inside your CD shipping jacket. It helps you quickly start assembling documents with ProDoc and guides you step-by-step through the Quick Start Assistant procedures.

The ProDoc Software Manual, Quick Reference Card and Quick Start Guide can also be viewed and/ or printed from your desktop by clicking Start > Programs > ProDoc > Documentation, then clicking the appropriate file name.

Customer Support

Telephone Assistance

Our staff of highly skilled support technicians and attorney developers are available to assist qualified users during regular business hours. The phone number for support is 800-759-5418.

You can also send an email to tech@prodoc.com.

Other Available Support Resources

- Help buttons on each ProDoc window
- Quick Reference Cards
- At the **ProDoc Web site**:  
  - Online Tips and FAQs  
  - Computer Based Training (CBT) Modules  
  - Periodic Internet live training seminars  
  - Schedule training seminars in your area

ProDoc Website

You are also invited to visit our Internet Web site at [www.prodoc.com](http://www.prodoc.com), which provides helpful information such as ProDoc Tips, Tech Notes, a list of frequently asked questions/answers (FAQs) and computer based training modules for major ProDoc functions. You can also schedule training seminars convenient to your location (subject to geographic availability) and join live seminars conducted over the Internet.

Current and prospective customers will also find a wealth of information about ProDoc, including major features and sales information. Our Web site is constantly undergoing changes so be sure to visit often. Let us know how we can improve its overall content to better serve your needs.
Welcome to ProDoc

Congratulations!

You have purchased the finest document assembly system for legal professionals available today. It is a revolutionary tool which vastly increases office productivity by automating repetitive document assembly tasks.

Several features make ProDoc superior to many other document assembly programs:

- **Displaying in Context** — The “cut-and-pasted” form is displayed while you are answering the fill-in-the-blank questions. If you prefer to answer the questions in questionnaire boxes instead of the context window, you may do so.

- **Client/Case Manager** — You can easily create and update clients and cases, even while you are simultaneously selecting a case. The related **Case Answers** feature helps you change answers to the questions asked during previous document assembly sessions for each client and their individual cases. When you assemble subsequent documents for a case, you have the option of answering only the new questions which you have not previously answered. You can still review each question previously answered if desired.

- **Document Manager** — The document manager feature helps you keep track of what documents you have assembled for each client and case. It has many of the same features as your Windows Explorer (file manager) to facilitate the management of all of your documents right from ProDoc.

- **Working with Multiple Documents** — Since law offices generally work with sets of related documents, ProDoc is designed to assemble multiple documents in a single session. This capability is further facilitated by the **Form Sets** feature, which allows you to pre-select commonly used groups of forms. These features are an extremely efficient way to produce documents because related information is shared between documents and fewer questions must be answered.

- **Supplemental Forms (templates)** — You can prepare your own supplemental forms, create the necessary fill-in-the-blank questions, and generate the finished document in ProDoc. Your supplemental forms and questions are kept separate from the ProDoc master forms (templates) and questions, but you can assemble supplemental forms in the same session with the ProDoc standard forms.

- **Graphic forms capability** — This gives you the capability to assemble popular predefined fill-in-the-blank graphic forms. These forms can be assembled and printed directly from within ProDoc. Press the F1 key while using the **Graphic Form Filler** to see additional information on how to assemble and print these forms.

- **Timeslips extension (optional feature)** — If you have Timeslips (version 9.1 or newer), you can integrate it with ProDoc to generate Timeslips “slips” while maintaining synchronized ProDoc and Timeslips databases. Consult **Appendix C** for assistance in setting up and using this optional feature.

- **Streamlined document assembly** — We have consolidated the steps necessary to initiate a document assembly session into one composite window to simplify and expedite the overall document assembly process. Click the **Help** button on the **Starting Document Assembly** window for additional information on how to use this feature.

- **Print various lists and reports** — You can print client lists, case data sheets, labels and QuickText reports from information drawn from the ProDoc client and case database. ProDoc also allows you to print blank forms, form lists, questions lists and form worksheets from the volume libraries to which you subscribe.

- **Print labels** — ProDoc has the ability to print mailing labels from information in your client and
case database.

- **Export client and case data** — You can export your client and case database information for use by other law office automation software systems.

- **Custom Fields** — Several user definable fields have been added for both contacts and cases to allow you to track additional information you want such as client social security numbers and cause numbers for cases.

We believe that you will be amazed at the simplicity and efficiency with which our software creates your legal documents. We are committed to developing the finest document assembly system available. We welcome your comments and suggestions so that we can continue to improve ProDoc with the features you need.

**About ProDoc**

ProDoc begins document assembly by asking a series of questions, then using the responses to determine the clauses and paragraphs to use in the final document. Following these questions, the form itself is shown, displaying finished legal language and all data completed to this point. Finally, users answer questions to enter the data in the remaining blank fields to complete the document. What you do not see is the complete logic the computer is processing in order to determine which questions need to be asked, skipped or answered automatically. It also renumbers all paragraphs and inserts proper gender pronouns. This system goes far beyond the simple "merge" systems that do nothing more than fill in the blanks.

The logic built into ProDoc is very extensive and results in an extremely efficient operation that asks all the questions that need to be asked while skipping the ones that do not apply to the transaction. In fact, many times the program will be able to determine the proper answer without even having to ask you. Information input for a particular client and case is saved for automatic use in subsequent document preparation for that client's case. Also, some information may always or nearly always be the same, e.g. attorney's name, address, signature block, etc. This information can be set as defaults to automatically appear whenever they are called for in any document.

ProDoc generated documents may be changed or customized. The master forms that contain the standard wording and clauses can be permanently edited by using your word processor. That way, you can insert your own customized wording to be included in the documents every time. Additionally, after a document is created by the system, you can use your word processor for the final editing and printing.

ProDoc was designed to be a versatile tool that can change and grow with your law practice and with the times. Its design allows you to build an entire library of volumes containing the documents you need most in your office. There are four types of information contained in each volume:

- **Master Forms** (templates) which are files containing the text and codes ProDoc uses to create the shell of your document.
- **Data Files** containing instructions telling ProDoc which questions to ask and what to do with your answers. ProDoc merges data and answers to the questions in the master forms to create a finished document.
- **Help Files** with explanations and information to help you use ProDoc.
- **Supplemental Forms** (templates) and **Supplemental Questions** are created by you to extend the power of ProDoc. They work just like the master forms in the volumes which you purchased, but cover the specific areas you need for your legal practice. **Appendix D** details the procedure for creating supplemental forms.
Chapter 1, Installation and Setup

Introduction to ProDoc Setup

This chapter will cover the information that you need to install ProDoc on your computer or network. Check the System Requirements and make sure that your computer meets the minimum standards for performance. If your computer does not meet these standards, you will need to upgrade or purchase a new computer before using ProDoc. Follow the installation steps carefully and you will have ProDoc up and running in no time at all.

System Requirements

ProDoc can be installed to any desktop or laptop computer meeting the following requirements. It can be installed on either a client/server or peer-to-peer network and accessed through desktop shortcuts on individual workstations. Offices installing ProDoc on a network are encouraged to read Appendix A of this manual.

You will need the following resources to run ProDoc with acceptable performance:

Hardware Requirements

An IBM®-compatible computer with at least 2 GB of RAM, a CD ROM drive, and a local hard disk drive (or network disk drive) with sufficient space to install and run ProDoc and the volumes. A monitor is required with a resolution of at least 1024 x 768 pixels. A Network Interface connection is required with a throughput of at least 1 Gbps for local network and high speed internet connection.

Operating System Requirements

Microsoft® Windows® 7 or higher with all service releases and service packs.

Word Processor Requirements

In order to edit, save and print completed documents using ProDoc and SOS, a separate word processing program is required. Select either Corel® WordPerfect® x5 (or newer) or Microsoft Word® 2010 for Windows (or newer) with all service releases and service packs.

Stand-alone or Networked

ProDoc can be installed to any desktop or laptop computer meeting the above requirements as a stand-alone program. It can also be installed on a server or host computer on either a client/server or peer-to-peer network, and the program can be used from shortcuts on client computer desktops.

Backup Drive

It is very important that you use an external device to backup ProDoc files. You may use any form of media to backup the ProDoc program.

Installing ProDoc

Networked Law firms should first read Appendix A, and then install ProDoc on their network server, paying particular attention to “network install note” annotations that appear during the installation process.

NOTE: These steps pertain especially to a new installation. Users updating an existing ProDoc
installation will see somewhat different windows.

INSTALLATION INSTRUCTIONS

Step #1 - Insert the CD into your CD-ROM drive.

Step #2 - Installation will normally start automatically. If not, see the Quick Start Guide in the CD shipping folder for help with beginning the installation process.

Step #3 – Opening Screen

Click Next to begin the installation.

Figure 1-1, Installation Start Window

Step #4 - Enter Key Code

Setup will update or install ProDoc and volume libraries in accordance with a unique installation key code. Enter your unique Key Code and then click Next to continue the installation.
Step #5 - Accept or reject End User License Agreements

The ProDoc End User License Agreement window appears. Read the license agreement. You can scroll through it with the scroll bar on the right side of the window. Click the appropriate button to indicate whether you accept or do not accept the terms of the agreement.

If you are subscribing to a volume containing state bar licensed forms, the state-specific State Bar License Agreement window appears. You can scroll through it with the scroll bar on the right side of the window. If you accept the agreement, click the Accept button. If not, click the Do NOT Accept button.

Step #6 - Confirm products to be installed

A window like the one shown in Figure 1-3 confirms which products will be installed per the installation key code you entered in step #4. Although it’s not recommended, you can deselect or select individual volumes if...
desired. Normally, just click Next to continue the installation.

**Step #7 – Verify installation location and network settings**

A window similar to Figure 1-4 appears. If the installation program doesn't detect a network, the suggested default installation location is the C:\ProDoc folder. We recommend you use the default setting. If you wish to change this, type the path and folder name or click the button next to the field to browse to the folder you wish to use. If the installation folder doesn't exist, the installation program will create it for you.

If the program detects a network, it will suggest a network drive for installation. See Appendix A of the software manual for detailed information on installing and using ProDoc on your network.

When you are finished, click the Next button.

**Step #8 – Selection of “Add In” features**

This window provides you an opportunity to select which optional features to install. Click the Help button for additional information. Then, click Next to continue the installation.

**Step #9 – Finish Installation**
A window appears which displays the status of the installation process. When it is complete, a window appears similar to Figure 1-5 indicating the installation is finished. Select the option you want by clicking the button next to the selection; then click the Finish button.

Figure 1-5, Installation Finished Window

Your ProDoc program installation is complete. You will find a ProDoc icon on your desktop and in Window's Programs/ProDoc group. You can run ProDoc by double-clicking the ProDoc icon on your desktop. You can also click the Start button, go to the ProDoc program group and click ProDoc.

Registration and Setup

When you first run ProDoc, the ProDoc Registration window will appear. You will only need to register ProDoc once, immediately after installation. When you install periodic updates, your registration will be automatically extended. The sections below correspond to the buttons available on the window. We recommend you use the steps below to register now.

Register

1. Carefully enter your 24 digit registration code. This code is printed on your Shipping Advice and Invoice. If you don’t have the code, you can call 1-800-759-5418 for help in retrieving the code. Click the Register button.

   (if available)

   a. If you entered the correct code, ProDoc will check your computer for an active Internet connection. If one is found, you will see a window displaying your Firm Name as it appears in our records.

   b. If you see an error message instead, click OK, carefully enter the code again and click Register.

2. The next window displays your Firm Name as it is listed in our records. If the firm name isn’t correct, you can change it at this point. After the firm name is ready, click the Continue button.

3. The Confirm Firm Name window appears. This window provides an opportunity to make changes to your firm name. If it is correct as shown, click the This is My Firm Name button. If not, click the Change Firm Name button, make necessary changes, and click Continue to return to this window.

4. A window will appear informing you that your registration process is complete. Click the Continue and Run ProDoc button to exit the window.

Register Later and Run ProDoc. If you choose this option:

- A window will appear informing you that a temporary registration has been created for you which
will expire in 15 days.

- The **ProDoc Registration** window will appear each time you run ProDoc for the next 15 days to help you register. To register while you are working in ProDoc, click **Tools → Registration → Register ProDoc** and use the steps in the **Register** section above.
- If you don't register within 15 days, you will only be able to use ProDoc after you register the software.

**Exit ProDoc without Registering.** If you choose this option, the registration window will appear each time you run ProDoc. After you register, it will no longer appear.

**Setup Windows.** After you select your choices for registration, other windows appear to help you tailor the installation to your needs.

- **Logging In.** The program will ask you to enter login initials or name. Type your initials or login name (depending on your preferred method) in the field provided. Your initials or login name can be up to 20 characters long. Since this is the first time these initials have been used, a message box will appear stating that you have not logged in with these initials before and asks if you want to log on. Click **OK** to use the initials. Click **OK** again and ProDoc will activate.
- The first user who logs in is designated as the Supervisor. Supervisors will see a **Customize** menu item called **Manage Users Login** and can designate other users as Supervisors or Users. This function is fully discussed in the **Manage Users Login** section.

**(If available)**

- The **Options and Settings** window will appear, displaying the **Firm Information** box. It will display your **Firm Name** differently depending on whether or not you have registered your software. Please note that you cannot change the Firm Name at this window.
  - If you have not yet registered, the **Firm Name** will appear as **Unregistered User. When you register, you will designate your firm name.**
  - If you have already registered, your firm name will appear as you entered it during registration. If you need to change your firm name in the future, click **Tools → Registration → Change Firm Name.**
  - Enter your firm's information in the appropriate fields. The required entries are **Firm Name (completed for you)**, the first **Address field, City, State, Zip Code** and **Phone**. We recommend that you also complete any other fields which apply to your firm. The information you enter will appear on many of your documents.
  - Another window appears offering to install a toolbar in your word processor. We recommend you click the **OK** button. This will make it much easier to work with documents in both ProDoc and in your word processor. You can remove it or reinstall it later in the **Customize → Options** menu. If you choose to install the toolbar, simply follow the prompts in succeeding windows.

**Manage Users Login**

The first person to sign on and run ProDoc will be added to the Staff file as the only supervisor. Supervisors are able to view and use a menu choice under the **Customize** menu titled **Manage Users Login**. From this menu, the supervisor can add, change or delete user records and specify default settings for new users.

Click **Customize → Manage Users Login** to display the **Browse Users Records** window (Figure 1-6).
Figure 1-6, Browse Users Records Window

This window displays all users who have logged in previously to ProDoc, along with their privilege level and name (if entered). If the information has been entered, the highlighted user’s name and address are displayed on the right side of the window. Buttons and their functions are described below:

**New** - Click this button to add a user, the user's privilege level, and name and address data. You must enter at least a login name. If you enter no other information, the privilege level will default to **User**.

**Update** - Click this button to edit any of the above information for the highlighted user.

**Delete** - Click this button to delete a user. A confirmation window will appear. Click the **OK** button to delete the user or the **Cancel** button to keep the user. You can right click a user name and click the **New**, **Update** or **Delete** selections on the pop-up menu to perform the same functions.

**Configure New User Settings** - Click this button to specify default personal settings for new users. A confirmation window will appear which states that settings for existing users will not be affected. To continue to the settings window, click the **Yes** button. To stop, click the **No** button. If desired, you can specify initial personal settings for document assembly, completed documents and WebUpdate. Settings for Word Processor, Graphic Forms and Miscellaneous Personal Settings categories cannot be changed; these links on this window are inactive. Individual users can change these settings later if desired. Click the **Help** button on each setting window for more detailed help. An explanation of these settings is available at the following links: **Assembly Settings**, **Completed Documents Settings** and **WebUpdate Settings**.
Chapter 2, Assembling Documents

Assembling Documents

Overview

This chapter guides you through a document assembly session step-by-step to illustrate the basics of the document assembly process. Keep in mind that simply following the steps outlined here only gives you a small portion of the power, productivity and efficiency of ProDoc. Refer to Chapter 3 for additional details about the ProDoc software's various menu driven features.

NOTES: The process described here primarily addresses the assembly of typical non-graphical forms. The graphical forms assembly process differs somewhat. Please click the Help button on applicable assembly windows for assistance.

The screen figures in this chapter are typical of what a Windows user with ProDoc installed on a local hard drive sees.

This chapter has been written for new and existing customers alike. So, many of the screen figures depict accurate information, typical of what you will encounter.

Document Assembly Wizard

ProDoc also has the Document Assembly Wizard to help you start assembling documents. This tool is geared towards new users and helps them assemble documents easily by taking them through a document assembly session step-by-step. If you want to use the Document Assembly Wizard, click File → Document Assembly Wizard. If you are currently using the ProDoc Quick Start Assistant, you may start the Document Assembly Wizard by selecting the Documents and Forms tab and clicking the Create Documents Using Wizard button.

Document Assembly Menu

Start ProDoc from the Windows 98/ME/NT/2000/XP/Vista Start button or from the ProDoc shortcut icon on your desktop. Users will be asked to log on with their initials in order to recall their unique ProDoc operating preferences. Chapter 3 discusses this configuration at greater length.

Select Assemble Documents

To begin assembling documents, click File → Assemble Documents or click the Assemble icon,
Phase 1 - Establish Assembly Settings

The Starting Document Assembly window appears, shown at Figure 2-2. This window is used to start an assembly session. It lets you specify which case file to use, which forms to assemble, where to save completed documents, and which default answer set to use.

Note the flat blue button at the bottom of the window. You can click it to contract the window to only reveal Steps 1 and 2, or click it again to reveal all four steps. In later assembly sessions, you may wish to skip Steps 3 and 4. ProDoc remembers your choice when opening the window again.

Figure 2-2, Starting Document Assembly Window

Step 1 - Select a client and case for storing your answers.

If you are a new customer and have no clients/cases entered, you should see Step 1A and Step 1B, then return here.

The ability to use case files for each client and case is one of the most powerful features of ProDoc. Answers you provide for clients/cases are automatically saved for use with documents you assemble later. This feature is described in detail in Chapter 3 of the software manual. We strongly recommend you do not use a case file for the following reasons:

- If you use a case file, ProDoc saves the answers you enter with the case. During subsequent case assembly sessions, these answers are displayed as defaults. This not only prevents re-typing; it also ensures consistent information entry when an item of information, such as a name, appears in more than one document.
- If you use a case file, you will have the option to save time by not reviewing answers to questions you answered during a previous assembly session using the same case.
- Timeslips users must use case files in order to generate slips from ProDoc as discussed in Appendix C of the software manual.
- Lastly, using a case file makes it easy for you to organize your assembled documents by client and/or
case. You'll have a record of all documents prepared by case, and you can easily open the documents in your word processor.

Due to the above, we recommend you click the Select case button to open the client and case selection window, Figure 2-3.

NOTE: If desired, you can still start your assembly session without client and case by clicking in the box labeled Don't use a case file. You will then skip case selection.

The Select a Case window lists existing clients and all cases for the clients. Here, you can select cases; see and modify related client/case data; and create new clients and cases.

Figure 2-3 depicts the Select a Case window. Note the flat blue button at the right of the window. You can click it to expand the window to reveal client and case details. This is discussed in more detail in Chapter 3.

The client/case list will be blank for new customers until they have added new clients and cases. Then, as in Figure 2-3, it lists all previously entered cases for the selected client.

If you are a new customer with no clients listed, you will want to click the New Client button. Scroll down or see Step 1A for more help. After you add the client, you can add a new case with the New Case button. Scroll down or see Step 1B for more help. After you add the case, click OK to return to the Select a Case window.

To select a case for assembling documents, you can double-click a displayed case, or click a displayed case, then press the Enter key or click the Select Case button. You'll be returned to the Starting Document Assembly window, which displays the selected case.

To find a client/case that's not displayed:

- Use the keyboard locator. Type the first few letters of the client's last name. As you type, the highlight will move to the next match on the client list. To start over, press the Backspace key on your keyboard. If the desired client isn't found, you need to change the category of clients to display as detailed below.

- Use the Now Showing drop down arrow. Cases are grouped under clients. You can choose the types of contacts/clients to display, including all contacts. These will be displayed with type icons of different colors on the window. The default is Active Clients.

   - [ ] All Contacts
   - [ ] Active Clients (default)
   - [ ] Closed Contacts
Private Clients

Non-Clients

- Use the Hide/Show Cases toggle button to display or hide cases. You can use the [ ] and [ ] buttons to expand a client list to hide or show cases for the individual client.

Other functions of this window:

- Use the Update Client or Update Case buttons to perform updates.
- Delete clients and cases with the Delete Client and Delete Case buttons.
- Expand/contract the window by clicking the blue arrow button on the right side window border. When expanded, the window will display the highlighted client's correspondence and phone information.
- When expanded, you can click the Send To button to copy the client's address or name to the Windows clipboard, or to paste the client's address with salutation, address only, or name only to your word processor.
- You can use the Client Custom Fields and Case Custom Fields tabs to view these fields. If you want to change any information, click the Update Client or Update Case buttons on the left side of the window.

Step 1A - Adding a new client (when necessary)

If the client you want to assemble documents for has not yet been added to the system and you've selected the New Client button from the Select a Case window (Figure 2-3) to add the new client to the system, you will see a window (with blank fields) similar to the one shown in Figure 2-4. Notice the three tabs on this window: Client information, Correspondence & Phones and Custom Fields.

Expand/contract the window by clicking the blue arrow button on the right side window border. When expanded, the window will display the highlighted client's correspondence and phone information.

ProDoc will remember your choice and will subsequently open the window expanded or contracted.

Figure 2-4, Client Will Be Added Window

Fill in each field of the Client information tab as shown at the left of the window. Leave the Override Document Placement box unchecked to use the default directory you specified in document settings. Only check the Override box to specify a different directory for this particular client.

After completing the information on the left, click the Refresh button on the right to copy envelope addresses from the left to the right.

At the right side, add a Salutation for correspondence.

Enter phone information on the right side by clicking the New button. In the window that appears, select the type of phone and enter the number in XXX-XXX-XXXX format.
Click the Custom Fields tab to reveal the custom fields entry box on the window, like the one shown in Figure 2-5.

If desired, enter any Custom Fields information for the custom fields you have set up earlier as shown in Figure 2-5.

Setting up these fields is discussed in Chapter 3.

When you are finished, click the OK button. Then click the New Case button to proceed to adding a new case.

Step 1B - Adding a new case (when necessary)

Note: If you want to integrate Timeslips with ProDoc, you will need to use Case IDs. Activating Case IDs is explained in Chapter 3.

If you use Case IDs, enter the appropriate one here. The ID must either be blank or be a unique set of characters for each case. If your firm doesn't use Case IDs, you can turn this feature off from the Main Menu.

The Date: field will default to today's date. You can change the date by typing it in or clicking on the date selection button next to the field.

Enter a unique name or phrase in the Description: field to help identify this case. It can be any word, number or combinations. Common uses are short descriptions such as "Divorce" or "Estate Planning".

Only click the Override Document Placement and Directory box if you want to override the default setting for this particular case. You can type in the path or click the browse button. The Directory Browse Window will appear; use this to find the desired location.

Filename - This field will not be visible if you chose in setup to have ProDoc automatically "use the form title for filename". Use this field to enter a file name to store all files for the case. Specifying the filename here prevents manually typing it for each document assembly session.

Click the Custom Fields tab if you have set these up earlier and wish to enter appropriate information. A window similar to Figure 2-7 will appear.
In this example, Case Custom Fields were set up which included Judge, Court Clerk, and Opposing Counsel.

Type in the information as needed, then click the OK button to return to the Select a Case window.

Click the Select Case button on that window to use the new client and case for document assembly.

NOTE: If you are finished with adding a new client and adding a new case, you may want to either go back to Step 1 to review the process for selecting cases, or move on to Step 2 to continue to assemble your document(s).

After selecting the client and case, you will be returned to the Starting Document Assembly window. Client and Case entries are now shown. Proceed to step 2.

**Step 2 - Select a volume and the form(s) you want to assemble.**

If the desired volume is not already displayed, click the Select Forms button. A window appears similar to Figure 2-8.

First, select a Volume by clicking the drop-down arrow field. A list of all installed volumes will appear. Click the one representing the area of law you want to use.

You may select as many forms at one time as desired. When a form is selected, a check mark appears in the box to the left of the title. To select or deselect a form, either click the form title or highlight it and then click the Select button. You can deselect it the same way.

Read on for a detailed description of using this window's tools.

Tools for Displaying and Finding a Form. The tabs across the top of this window provide several unique
options:

**Numerical** - Displays forms in numerical order, organized by area of law. This is the default display.

**Alphabetical** - Displays forms in alphabetical order based on their title. The form number appears to the right of the form’s title.

**Supplemental** - Shows a window for supplemental forms for assembly for that volume of law. Supplemental forms are forms you create to add to the ProDoc software's forms library.

**Form Sets** - Shows a window for form sets which have been created for that volume of law. Form sets are collections of forms that allow a single item to select several forms at the same time, saving you time in selecting a number of forms in a volume.

**Selections** - Displays forms currently selected for action. The **Clear Selections** button can be used to deselect a highlighted form.

The **Numerical** and **Alphabetical** selections also contain the following options at the bottom of the window:

- **Form Info** - Brings up detailed information about the highlighted form.
- **Find** - Brings up the find form dialog window to search for forms containing a specific word or phrase.
- **View** - Displays the highlighted form with all language inserted and blanks inserted where client/case information would be located. This feature is useful for viewing a form without assembling it.

**NOTE:** If you need to change to a different volume, click the drop-down arrow field labeled **Volume:** and choose another from the list.

**Tree Control**

The **Numerical** display tab includes a standard Windows tree control which is used to hide and display the forms contained in each chapter of a volume. It can be especially useful when dealing with a very large volume. When you contract the tree, only the chapter headings are displayed. This makes it easier to scroll through the list looking for the chapter you need. After finding it, you can expand that chapter and select the appropriate form.

- To contract the entire form list, click **Hide Forms**.
- To expand the entire form list, click **Show Forms**.
- To contract a single chapter, click the box.
- To expand a single chapter, click the box.

When you have finished selecting one or more forms, proceed to Step 3.

After selecting your form(s), you can either accept answers you’ve already entered or review each question and answer. Click the **Review prior answers** box to go over any previously saved answers and make changes before assembling documents. If you leave the box unchecked, only those questions not previously answered will be asked, and the answers previously entered will be used without review.

An arrow button at the bottom of the **Starting Document Assembly** window lets you hide or show Steps 3 and 4, which deal with document location and default answer sets.

**Step 3 — Tell ProDoc where to save the completed documents.**

Normally, you’ll want to use the displayed directory, which will be the default settings you chose in your setup preferences.

- The **Directory** field lists the drive and directory where assembled documents will be saved. If you prefer a different directory for these documents, type it in or click the **Browse** button to the right of...
the box and select the drive and directory from the Directory Browse window.

- The **Documents will be saved as:** entry shows the path and confirms whether the actual form title or another name will be assigned.

  **NOTE:** The filename will usually end with `.doc` for Microsoft Word and `.wpd` for WordPerfect, depending on your selected word processor. These settings are discussed in detail in Chapter 3.

**Step 4 - Verify other assembly options.**

The **Default Answer Set** field is provided to let you designate optional default answer sets (discussed in Chapter 3) for this document assembly session.

If you have created any alternate sets, select the default answer set you want to use from this list by clicking the drop down arrow at the right of this field. Otherwise, ProDoc will use your **PRIMARY SET**.

Figure 2-9 provides example entries following the completion of the foregoing steps 1-4:

Figure 2-9 shows the completed assembly session settings.

Now, you’re ready to start assembling. Click the **Start Assembling** button in the lower right hand corner of the Starting Document Assembly window to begin document assembly.

**Phase 2 - Answer "Assembly" Questions**

After clicking the **Start Assembling** button, you will see a Volume Banner Screen similar to the one in Figure 2-10.
Every Volume has a banner screen to provide information about the volume.

You can read it, choose to get more information on the listed volume by clicking the **Info** button, or click the box next to **Do not show this window again** to avoid seeing it again.

Select **OK** to continue to the next window.

Questions used to assemble your document will be presented in various windows similar to the one shown in Figure 2-11. Note that you can click the flat blue button labeled **Show** or **Hide Explanation** to see or hide an explanation for the question.

Simply complete the **Answer** field and click the **Next** button to proceed to the next question window.

**NOTE:** The questions are displayed in one of several formats, including Fill-in-the-Blank context, Fill-in-the-Blank non-context, Single and Multiple Choice, Combo, List and Table as follows: (see below)

- **Fill-in-the-Blank** questions allow you to simply type in your answer (such as a client’s name or street address). They may be presented in either a context or non-context window. Click the **Next** button after you have typed in your answer.

- **Single Choice** questions present you with a list of items from which you select only one. To select an item, highlight it, then press **ENTER** or click the **Next** button.

- **Multiple Choice** questions present a list of items from which you select any number of items or none at all. To select an item, highlight it, then press **SPACE** or click the **Select** button. You can also use your mouse. When you have made all of your selections, click the **Next** button.

- **Combo Questions** present you with a list of likely answers and an entry field. Your answer is the text that you put in the entry field. An answer from the list is put into the entry field when it becomes highlighted. You are not limited to the answers in the list. You may type whatever you want into the entry field.
List Questions are used to fill in answers in lists, and you can add rows/answers, edit answers in previous rows and move rows as needed. One example of this is entering a list of names of minor children.

Table Questions allow you to enter answers in rows and columns of a table, selectively edit or delete any entry, and move rows up and down in the table.

Validation for Answers: For answers which have special requirements, ProDoc checks the answers against specific criteria to minimize data entry and logic errors. Follow the guidance in the validation window to correct the answer and move to the next answer field.

Options Buttons. Depending on the type of question, the following buttons are available:

- **Help** - Displays the help topic for the window.
- **Set as Default Answer** - Sets the current answer as the default answer for the active question. To use this feature, type in the answer you want to use as a default and click the button. Verify whether or not you want this answer as the default by clicking Yes or No on the resulting window.
  
  NOTE: Several answers taken from Firm Information fields are handled differently; click the Firm Information in Answers link to see how to set default answers for these items.

- **QuickText** - only visible on fill-in-the-blank answers. Click the button to bring up the QuickText window, where you can select one of the entries as the answer to your question. You can always insert QuickText by using the shortcut designated when the entry was created.

- **Previous** - displays the previous question.
- **Next** - displays the next question.
- **Save and Continue** - saves all answers you previously entered and accepted by clicking Next. Use this button to ensure your answers are saved in the event of a computer malfunction during an assembly session. Clicking this button does not save the currently displayed answer because it has not yet been accepted.

- **Quit** - Exit the current question. If assembling a document, this button brings up the session quit options window to determine where to proceed after exiting.

- **Show or Hide Explanation** - Provides helpful information about the current question.

- **Auto** - will not be available for every window. Selecting this option tells ProDoc to automatically answer this and all remaining questions with the placeholder specified in system Assembly Settings. This will create a finished document with the placeholder inserted in all locations where you did not actually enter an answer. Later, you can reassemble the document and fill in the blank answers or replace the placeholders with answers in your word processor. Reassembling is best because it adds saved answers to your case database that can be used in future documents.
Phase 3 - Answer "Merge" Questions

Figure 2-12 shows the document after it has been pre-assembled with necessary clauses. You now progress through the document by completing the blank fields with information for the specific client and case.

For each blank, a question is displayed at the bottom left of this window (circled in red). You can also click Explain on the menu bar for more help on the question.

Figure 2-12, Context Display Window

Type your answer in the shaded fields and then press TAB, Alt+N, or click the N button to move to the next field. You will be prompted to enter information in the bottom left corner of your screen as noted in Figure 2-12. After you enter the information in the last field and press Tab, ProDoc will close the merge phase and save your document. If you have chosen the option in setup preferences, ProDoc will then open the document in your word processor.

Validation for Answers: For answers which have special requirements, ProDoc checks the answers against specific criteria to minimize data entry and logic errors. Follow the guidance in the validation window to correct the answer and move to the next answer field.

A description of controls on this window follows.

Navigating From Field To Field. To move forward to the next field:
- Press the Tab key,
- Click N on the menu bar, or
- Press ALT + N.

To move backward to the previous field:
- Press the Shift + Tab keys,
- Click P on the menu bar,
- Press ALT + P.

Menu Options

Quit - Exit the current document. Brings up the Session Quit Options window to determine where to proceed after exiting.

Explain - Provides help information about the active question.

Default - Sets the current answer as the default answer for the active question. To use this feature, type in the answer you want to use as a default, then select Default from the menu. This brings up a window to verify you want to set the answer as a default.

NOTE: Several answers taken from Firm Information fields are handled differently; click the Firm Information in Answers link to see how to set default answers for these
items.

**QuickText** - Accesses the **QuickText** browse window to paste entries into the document.

**Auto** - Tells ProDoc to automatically answer this and all remaining questions with the placeholder specified in system **Assembly Settings**. This will create a finished document with the placeholder inserted in all locations where you did not actually enter an answer. Later, you can reassemble the document and fill in the blank answers or replace the placeholders with answers in your word processor. Reassembling is best because it adds saved answers to your case database that can be used in future documents.

**P** - Backs up to the previous field.

**N** - Advances to the next field.

**Save and Continue** - saves all answers you previously entered and accepted by clicking **N** or pressing the **Tab** key. Use this button to ensure your answers are saved in the event of a computer malfunction during an assembly session. Clicking this button does **not** save the current field's displayed answer because it has not yet been accepted.

**Help** - Brings up the help topic for this window.

**NOTE:** Cut, copy, and paste actions can be performed from this window.

**Phase 4 - Saving Documents**

After all of your selected documents have been assembled, a Completed Documents window (Figure 2-13) appears with a list of completed documents showing the filenames under which they were stored. Note the filename(s) and file location, then click the **Continue** button.

A **Rename** button is provided should you want to alter any aspect of the document path and name. We recommend that you avoid renaming at this stage of document assembly.

A **Move** button is also available for use if you want to store the document in a different folder than the default.

![Figure 2-13, Completed Documents Window](image)

**Phase 5 - Edit and Save Completed Documents**

ProDoc will automatically send the first completed document to your word processor for final review, editing, re-saving and printing.

**NOTE:** Microsoft Word users saving a document will most likely encounter a pop-up window asking confirmation if you want to save it as a Word document. If you encounter this window, it is best to save the document in Word format in order to preserve the formatting integrity of the edited document. WordPerfect users should do likewise and save in their native version.
If you are using a recent version of WordPerfect or Microsoft Word, ProDoc will insert the document’s name into the “recently used files list” at the File drop down menu if you enabled this feature in setup. This makes it very easy to find and open recently saved documents. If you assembled more than one document, you can open successive documents in the same fashion. If you have not enabled this feature in setup, you must find and open the files in the location where you told ProDoc to save your completed documents.

Now that you know how to assemble documents with ProDoc, proceed to Chapter 3 to learn more about how to navigate the program's various menu items and buttons.

**NOTE:** Assembling and printing graphical forms differs from the foregoing procedure. ProDoc uses an entirely different assembly technique which includes sending finished graphical forms to your default PDF reader rather than sending them to your word processor.
Chapter 3, Main Menu

The Main Menu

This chapter helps you learn how to navigate through ProDoc by providing a description of the various options and features available from the main screen menu and toolbar. Figure 3-1 shows the main screen menu on a ProDoc installation on a computer which also has the Small Office Suite program installed.

![Figure 3-1, Main Menu](image)

Also, ProDoc has many windows which list information you scroll through, like your list of clients and the list of forms in a volume. These lists are called Browsers because you can browse through the list and make a selection.

Most of the ProDoc software's browse lists include "locator fields". This means when the list is selected, you can simply type the first few letters of the selection you want and ProDoc will instantly jump to it. As you type letters, they are displayed in the locator field (usually located above the top left corner of the list) so that you can see what you have typed. For example, if you want to jump to form "3-16" in the form selection screen, simply type "3-16". When you enter "3", ProDoc will jump to form 3-1 and the locator field will display "3". As you continue typing "-16", ProDoc will jump to form "3-16" and that is what is displayed in the locator field. If you want to jump to a different entry, you will need to clear the locator field. To do this, simply press Backspace to delete each letter or press the up or down arrow key once. For example, after you type "Smi" to jump to "Smith" you will need to clear the locator field before you can type "Ada" to jump to "Adams".

**NOTES:** The screen figures in this chapter are typical of what a Windows 98/ME/NT/2000/XP/Vista user with ProDoc installed on a local hard drive sees.

This chapter has been written for new and existing customers alike. So, many of the screen figures depict accurate information, typical of what you will encounter.

Toolbar Buttons

![Figure 3-1A, Main Menu Toolbar](image)

The ProDoc main window normally has five icon buttons displayed on the main window toolbar. This changes to six buttons if the Small Office Suite is installed, which is the case in Figure 3-1A. If the Small Office Suite program is not installed, then that particular icon will not be displayed. Click the buttons below to get more detailed help. Click the Back Arrow or Contents tab to get back to this section.

Click to begin a document assembly session.
Click to start your preferred word processor (Microsoft Word or WordPerfect). This button switches to or opens your word processor.

Click to open the Small Office Suite (SOS) program if you have it installed. This program can help you:

- Track more detailed information regarding your clients and cases
- Track time and appointments
- Manage billing
- And much more!

To find more information about SOS, please call the Sales Department at 800-759-5418.

Click to open the Client/Case Manager, a central management area for clients and cases. You can add, change and delete client and case information.

Click to open Document Manager, the central document management area, where you can add, change, move and delete completed documents.

File Menu

File

Assemble Documents

Document Assembly Wizard

Microsoft Word

ProDoc PDF Reader

Find Forms

Exit

Figure 3-2, Main Menu File

Drop-Down Box

Assemble Documents starts a document assembly session. This selection performs the same function as the Assemble toolbar button. Chapter 2 explains the document assembly process in detail.

Document Assembly Wizard takes you step-by-step through the document assembly process. The wizard is especially useful for new ProDoc customers because it provides an easy-to-use interface for creating new documents. You may use the Document Assembly Wizard in the Quick Start Assistant or by clicking File ➔ Document Assembly Wizard on the ProDoc menubar.

Microsoft Word lets you open or switch to your preferred word processor. The word processor that starts (either Microsoft Word or WordPerfect) depends upon which is installed and which you chose during
setup. This selection also switches to your word processor if it's open. This selection performs the same function as the Word Processor toolbar button.

**ProDoc PDF Reader** opens the ProDoc software's built-in PDF file reading program. This program also has a typing feature for filling in blanks in PDF forms. You can designate this program as your default viewer for all PDF documents and use it to view and print completed graphic documents in ProDoc.

**Find Forms** brings up the form search window shown in Figure 3-3. You can search for forms by typing a key word or phrase in the **Search for:** field. You can search either in specific volume(s) or throughout all volumes.

You must first select one or more volumes from the list on the left by clicking the title, box or the **Select All/Select** buttons. If you cancel the search after one or more matches have been found, you will be asked whether you would like to view a list of the matches found up to that point.

![Figure 3-3, Search Window](image)

**Exit** closes ProDoc. If "Auto Backup at exit" is selected in Options and Settings, you will be prompted for a backup choice. If you are running SOS, you'll likely want to backup your files with that program instead of using ProDoc.

**Edit Menu**

![Figure 3-4, Edit Menu Drop-Down Box](image)

**Cut, Copy and Paste** are shown in Figure 3-4. These choices will be available when you are working on a form or document, or when you are entering information into any available text field in ProDoc. These choices will be grayed out when they cannot be used. Each of these selections performs the desired action only on the text you have selected.

**Cut** moves selected text from your document to the Windows clipboard and deletes it from your document.

**Copy** copies selected text to the Windows clipboard.

**Paste** inserts selected text from the Windows clipboard to the cursor position in your document.
Clients and Cases Menu

Client/Case Manager brings up a management window where you can add, delete, search for or select clients and cases as well as modify specific client and case information. This selection performs the same function as the Client/Case toolbar button.

One of the most important features of ProDoc is its ability to build a case file for saving your answers. Using this feature allows you to reuse information entered in earlier assembly sessions every time you produce documents for that case. As the case progresses, you find that you enter less and less information in order to produce finished documents. For example, once you enter the county where the suit is filed, dates, names of the parties, addresses, etc., that information is automatically available for subsequent documents and does not have to be retyped. The answers you entered in previous assembly sessions will be automatically displayed as the proposed answer whenever appropriate to the question.

You can have an unlimited number of clients in ProDoc and each client can have an unlimited number of cases. Note: Normally, you will enter new clients and/or cases during a document assembly session as discussed in Chapter 2.

While a case file should normally be created for a single legal matter (such as Estate Planning or Divorce), you are not restricted to using only one ProDoc volume. If necessary, you can assemble documents from several volumes in a single case file.

Clicking Client/Case Manager brings up a window like the one shown in Figure 3-6. This window displays the clients you have entered, the cases, phones, correspondence addresses and custom fields for each client and case. It allows you to add, update and delete these items.

The client/case list will be blank for new customers until they have added new clients and cases. Then, as in Figure 3-6, it lists all previously entered cases and clients.

Note the flat blue button at the right of the window. You can click it to expand the window to reveal client and case details or contract it to only reveal clients and cases.
you have chosen to use these in setup preferences.

The **Now Showing** box tells you what types of contacts or clients are displayed. Click the drop down arrow to select the type to display:

- **All Contacts**
- **Active Clients** (default)
- **Closed Contacts**
- **Private Clients**
- **Non-Clients**

Use the **Hide/Show Cases** toggle button to display or hide cases. Click ☐ or ☐ to hide or show cases for individual clients. You can drag the vertical line column separator left and right to allow more room for a particular column. You can also use the scroll bar at the bottom of the section to move the column view to the right.

To add a new client or update the information for the highlighted client, click **New Client** or **Update Client**. This brings up the **Client Information Dialog** window where you perform the desired action. You can also double-click a client to update the information for that client. Right-clicking on a client brings up a pop-up menu corresponding with the **New**, **Update** and **Delete** options displayed. You can also click **Delete Client** to remove the client from the system.

When you double-click a client or click the **New Client** or **Update Client** buttons, a **Client Information Dialog** window similar to Figure 3-7 will appear.

![Figure 3-7, Client Dialog Window](image)

Information is displayed in three tabs: Client Information, Correspondence and Phones and Custom Fields.

To add or edit client information, click the appropriate field or press the Tab key to move from one field to the next.

The **Client Information** tab of the Client Dialog Window is where basic information about the client is maintained such as shown in Figure 3-7. Most of the information in this screen is self-explanatory, such as name, address, and correspondence. Client ID’s are unique letter/number combinations that identify each client (similar to how a social security number identifies a person). If you do not use this feature in your practice, you can turn it off in ProDoc under the **Options** menu as discussed elsewhere in this chapter. When this feature is turned off in ProDoc, the client ID field is not displayed.

**NOTE:** If you will use Timeslips with ProDoc, you should assign Client IDs and Case IDs. You should also ensure your Client IDs are no more than 30 characters long due to Timeslips program limitations on that program’s corresponding Nickname fields.

The **Close Client** button will only appear when you are updating an existing client. You can use it to change your client's status. If you are updating a client with a status of closed, the button will be labeled **Re-**
**Open Client.** If you click this button, the client’s status will change to open.

**NOTE:** At the bottom of this window is a Directory field which displays the default location where your completed documents will be saved. Leave the *Override Document Placement* box unchecked to use the default directory you specified in the *Customize/Options/Completed Document* settings. Check the box to specify a different directory for this client.

When you click the **Custom Fields** tab, the Custom Dialog window like the one shown in Figure 3-8 will appear. Just fill in the custom fields provided (if any were established by you in system options settings).

![Figure 3-8, Client Custom Fields Tab](image)

The same functions on the left side of the Client/Case Manager Window explored earlier for clients also apply to working with cases. Double-click a case or highlight it and click **Update Case** to reveal the Case Dialog Window, where you perform the desired action. Clicking **New Case** also reveals the window. Clicking **Delete Case** removes the case from the system.

When you double-click a case or click the **New Case** or **Update Case** button, a window similar to Figure 3-9 appears.

![Figure 3-9, Case Dialog Window](image)

If you use **Case IDs**, enter the appropriate one here. The ID must either be blank or be a unique set of characters for each case. If your firm doesn’t use Case IDs, you can turn this feature off from the **Main Menu**.

**NOTE:** If you want to integrate Timeslips with ProDoc, you will need to use Case IDs. Activating Case IDs is explained in the *Clients & Cases Settings* section in Chapter 3.

The **Close Case** box will only appear when you are updating an existing case. You can use it to change the status of the case.

The **Date** field will default to today’s date. You can change the date by typing it in or clicking on the date
selection button next to the field.

Enter a unique name or phrase in the **Description**: field to help identify this case. It can be any word, number or combinations. Common uses are short descriptions such as "Divorce" or "Estate Planning".

Only click the **Override Document Placement** and **Directory** box if you want to override the default setting for this particular case. You can type in the path or click the browse button. The **Directory Browse Window** will appear; use this to find the desired location.

**Filename** - This field will **not** be visible if you chose in setup to have ProDoc automatically "use the form title for filename". Use this field to enter a file name to store all files for the case. Specifying the filename here prevents manually typing it for each document assembly session.

Click the **Custom Fields** tab if you have set these up earlier and wish to enter appropriate information. A window similar to Figure 3-10 will appear.

In this example, Case Custom Fields were set up which included Judge, Court Clerk, and Opposing Counsel.

Type in the information as needed, then click the **OK** button to return to the **Select a Case** window.

Click the **Select Case** button on that window to use the new client and case for document assembly.

**Right side of Client/Case Manager Window**

You can view detailed client correspondence, telephone, and custom field information on the right side of the Client/Case Manager window, depicted in Figure 3-11. While working on this window, if the right side is not already displayed, click the arrow button on the right border of the window.

The **Client Information** tab displays salutation, mailing address and phone information.

Click the **Send to...** button to reveal a pick list of actions involving this information. Choosing Paste functions opens your word processor and pastes the information. Clipboard functions copy information to the Windows clipboard for later pasting.

You can double-click any phone entries to edit the phone type and number. To edit any other information,
click the **Update Client** or **Update Case** buttons on the left side.

Click the **Client Custom Fields** and **Case Custom Fields** tabs to display information already entered in the custom fields designated during setup or in a later options setting. If you want to change any information, you must click the **Update Client** or **Update Case** buttons on the left side of the window.

**Document Manager** brings up a list of the documents, organized by client and case, which you’ve already assembled, and any additional files that you have selected for file management within ProDoc. This selection performs the same function as the Document toolbar button, . You can also work with any documents in your computer and/or network that you can locate with Windows explorer. Selecting this menu item or button brings up a window similar to Figure 3-13.

This window is resizeable to let you see more information. You can click and drag any vertical line separating columns to allow more or less room for each column. Where scroll bars are displayed, you can also scroll up or down through the lists or scroll the view from left to right.

**Left side - Clients and Cases**

**NOTE:** The display, navigation, client and case functions included in this window are the same as those covered in detail in the Client/Case Manager section of this chapter.

Click the links to jump back to the applicable portions of the Client/Case Manager section:

- Adding and Updating Clients
- Adding and Updating Cases
The upper left side of the Document Manager window lists the clients alphabetically by last name along with client and case IDs (if assigned).

The **Now Showing:** box tells you what types of contacts or clients are displayed. Click the drop down arrow to select the types to display:

- All Contacts
- Active Clients (default)
- Closed Contacts
- Private Clients
- Non-Clients

Use the **Hide/Show Cases** toggle button to display or hide cases.

Clients, cases and unique IDs for each will be displayed alphabetically by last name. The IDs appear only if you have chosen to use these in setup preferences.

Click + or – to show or hide cases for individual clients.

To add a new client or update the information for the highlighted client, click **New Client** or **Update Client**. This brings up the **Client Dialog window** where you perform the desired action. You can also double-click a client to update the information for that client. Right-clicking on a client brings up a pop-up menu corresponding with the **New**, **Update** and **Delete** options displayed. You can also click **Delete Client** to remove the client from the system.

While a client is highlighted, the same functions apply to working with cases. Double-click a case or highlight it and click **Update Case** to reveal the **Case Dialog Window**, where you perform the desired action. Clicking **New Case** also reveals the window. Clicking **Delete Case** removes the case from the system.

**NOTE:** A locator field lets you type a letter which causes the highlighting cursor to jump to the first client name beginning with the letter.

**Right side – Documents**

The right side of the window displays the documents linked to either the client or the case highlighted on the left side. This is illustrated by Figure 3-14:
Documents are listed for the highlighted case, sorted alphabetically by title. If desired, you can click the column titles to sort in ascending or descending order by a particular column. Each document’s Create Date and Author are displayed if the window is large enough. You can click and drag the vertical lines to allow more or less room for each column. You can also use vertical or horizontal scrollbars (displayed when needed) to scroll up and down or side to side.

As with clients and cases, you can double-click a document to update it. You can also click a document title to highlight it, then click the buttons to Add a document, Update the document or Delete just the document record or erase the actual document. You can click the Open File button to open the document in your word processor. If the highlighted document was assembled in ProDoc, the Reassemble button will be active and can be clicked to reassemble the document. You can right-click the document to reveal a pop up window with the same options.

If the document you select is a graphics document, you can view it by clicking the Preview PDF button.

**Top Section - Find Documents and Forms**

One of the ProDoc software’s key features is the ability to drag and drop files from computer search windows to your ProDoc database. Two buttons appear in the top section to help you locate documents and forms and either add them to your database or work with them in other ways.

The Windows Explorer functions described below are dependent upon the selections made in Options and Settings for Miscellaneous Firm Settings. Drag and drop results can be set to do the following: physically move selected files to the client/case file folder; only copy files to the client/case folder; or have ProDoc ask you what to do each time you drag and drop.

- **Windows Explorer** - Click this button to open Windows Explorer. You can locate documents and drag them to the right side of the Document Manager window to include them in your ProDoc database. You should resize the explorer window to facilitate selecting one or more file(s) for “dragging” from Explorer over to the right side of the Document Manager window and “dropping” them there. They will then be added to the database for the client or case currently selected.

  **NOTE:** You can do the same thing using Windows File Find or Search, and drag the result of your search to the Documents Organizer browse window.
- **Find a Document** - Click this button to search for documents throughout your computer or network folders.

When you click the **Find a Document** button, a window opens similar to Figure 3-15. The Clients & Cases Document Manager stays open also.

![Figure 3-15, Prepare Your Search Window](image)

You can search any folder, including ProDoc databases, by selecting Document Text Search. Then select your search scope by clicking the button labeled either All Documents or Only Documents in ProDoc.

You can enter matching text in the field labeled **Text to search for**. Your entry can be up to 512 characters long. ProDoc will search any text document it finds for matching text.

Opposite the field labeled **File(s) to look for**, you can enter classic DOS masks, like *.doc* to look only for Word documents; **P* ** to find any files starting with the letter P, and so on.

Enter your **Directory to search by either typing it in or clicking the browse button**, and selecting the directory. Subdirectories will automatically be searched.

Documents matching your criteria will be displayed in the right side of the window. Documents you find outside of ProDoc databases can be dragged and dropped to the Document Manager window to include them in your ProDoc database. Click a file, hold the left mouse button down, and drag the document to the left side of the Document Manager window (to a client or case) or to the right side, then release the button.

Documents and files you add to clients and cases can be opened, edited and saved with their associated program. For example, Word documents will open in Word if you highlight the document and click the **Open** button.

You can correct any drag and drop mistakes by repeating the same operation inside the Document Manager window.

You can also click the button labeled **Advanced Database Search** to search only the ProDoc database with a variety of matching options and criteria. Click the **Help** button when you use this screen to see all available options and controls.

- **Case Answers** - This menu choice brings up a list of all the questions you have answered in a case, which you can quickly edit so that your case documents reflect correct information. This changes only the answers in the ProDoc data files, not in the documents already assembled. To insert the new answers into your documents, you must reassemble the documents.

**NOTE:** Changing **Case Answers** is handled differently for those answers that are taken from the **Firm Information** fields (which were entered upon installation). See **Firm Information in**
PowerPacks Menu

In Figure 3-16, the PowerPack name is listed on the left and the programs in the PowerPack are listed on the right side of the menu. This menu will change depending upon which PowerPacks you have installed.

We have developed PowerPacks—Additional Time savers, specific to each state we serve, which are designed to significantly increase your productivity. These programs allow you to enter information in your clients' case files and manage the information quickly and efficiently. If calculations are necessary, the programs perform the calculations and insert the results wherever they are needed.

For more information on the programs available for your state, please visit our Web site at www.prodoc.com or call our Sales Department at (800) 759-5418.

eFile Menu

To begin eFiling from ProDoc, click eFile on the main menu. There are two choices under eFile on the menubar: eFiling Manager and eFile Documents.

- eFiling Manager
  - If you need to register for eFiling, you should click this menu choice. It opens the ProDoc eFile web page, www.prodocefile.com, in your browser. Click one of the Register for eFiling links on the page to get started.
  - If you are already a registered user, you can log in to open the Firm Home Page. At this page, you can eFile, view past filings and status and view/update personal user account information. If you have been designated as a Firm Manager, you can manage reports, user accounts, document filings, eService information, firm information, passwords and credit card information.

    **NOTE:** If you use eFiling Manager, stored ProDoc case information will not be automatically entered or available for your filing. To use ProDoc software's stored case information, choose eFiling Documents instead.

For detailed step-by-step help, click the Help buttons on the windows that appear during the eFiling process. Visit www.prodocefile.com for more information, including FAQs, 24/7 computer-based training.
tutorials, and other support.

**Print Menu**

Figure 3-17, Print Drop-Down Menu

This menu item conveniently lists in one place ALL of the print options that are available in ProDoc, including the list of items which follows.

**Blank Forms** allows you to quickly preview and print any form available in ProDoc so that you can quickly determine if it contains the language you need. Blank forms printed in this manner contain visible coding and formatting that will not appear in your finished ProDoc documents and, accordingly, generally should not be opened for editing directly in your word processor.

**Client List** prints a list of clients from your database.
- You can select any combination of Open or Closed Clients and/or Non-Clients. Within these categories, you can sort the list by Last Name, Client ID, City, State and Zip Code.
- You can also choose to print open and/or closed cases along with your client listings.

**Case Data Sheet** prints a summary report for a particular case. You can select the case from active or inactive cases.

**Form Lists** prints a listing of all master forms in a particular volume:
- **Alphabetical Order** prints a listing of forms in the volume you select in alphabetical order.
- **Menu Order** prints a listing of forms in the volume you select in numerical order by the document selection number.
- **Supplemental** prints a listing of any supplemental forms that you have created and added to a volume.

**Question Lists** gives you three menu options:
- **Global Questions** prints a list of global questions that apply to all volumes.
- **Volume Questions** prints a list of questions that apply to selected volumes.
- **Supplemental Questions** prints a list of questions specific to any supplemental forms you've added.

**Worksheets** generates interview questionnaires for clients, reducing the time it takes you to produce documents. There are five different types of worksheets to choose from:
- **Assembly Questions** are those asked during the first phase (assembly or cut-and-paste) of an assembly session.
- **Merge Questions** are asked during the merge phase. Prints all questions that may be asked
during the merge phase for the selected document.

- **Custom Merge Questions** creates a "custom" worksheet that contains only those merge questions that would be asked for a specific set of answers to the assembly questions.
- **All Questions** prints a list of all questions asked for the selected form(s).
- **All Questions as Asked** prints a list of all questions for the form(s) in the order asked.

**Labels** displays the setup window for printing labels for all or selected clients. You may choose from a number of commonly available templates. You can also control which labels on a page are printed by selecting how many labels to skip.

**QuickText** gives you a convenient way to view and/or print a summary report of all established QuickText entries along with their assigned hot keys.

**Print Blank Forms Menu**

The **Print Blank Forms** menu choice lets you to print a document that has blank spaces in the place of fill-in-the-blank answers. You can see what the completed document will look like before you print it. Many attorneys use this feature so they can fill in the information on paper instead of directly entering the information into a computer while the client is in the office.

This topic covers the basic choices for this function from beginning to end. Detailed help for each window you see is available by pressing the F1 key or clicking the Help button on each window.

1. From the **Main Menu**, click **Print → Blank Forms**.
2. Click **Select Form**.
3. Select a volume with the drop down arrow at the top of the window. A list of forms appears.
4. Select a subvolume if desired. Set the list order with the **Numerical** or **Alphabetical** tabs.
5. Double-click the form you want. If it’s not visible, you can scroll down or use the **Find** button to search for a form by entering search words. Clicking the **Info** button opens a window with specific form information.
   a. If you select a graphic form, the form will always be printed blank and no questions will be asked. The remaining steps here will not apply. Simply click the **Print** button to send the form to your printer.
   b. If you select a non-graphic form, see steps 6-10 below.
6. Select **Assembled** or **Not Assembled**.
7. For **Assembled**, you’ll be given assembly questions to answer. Fill-in-the-blank underlines "___" will be inserted in the document. For **Not Assembled**, no questions will be asked and the form will appear with programming codes and selection choices.
8. Click **Print**. If you chose **Assembled**, a series of questions will appear.
9. You can type in answers or insert **QuickText** entries, and you can also designate the answer as a **Default Answer** for the question. Click **Next** or **Previous** to move between questions. An explanation of the question can be toggled on and off by the **Show/Hide Explanation** tab. After you answer the questions, the form will be displayed in a window.
10. You can send the form to your printer, open it in your word processor to view how it will look when printed, or close it by clicking the displayed buttons.

**Print Client Lists Menu**

The **Print Client list** menu choice prints a list of all clients in the database. This topic covers the basic choices for this function from beginning to end. Detailed help for each window you see is available by
pressing the F1 key or clicking the Help button on each window.

- You can select any combination of Open or Closed Clients and/or Non-Clients. Within these categories, you can sort the list by Last Name, Client ID, City, State and Zip Code.
- You can also choose to print open and/or closed cases along with your client listings.

To print a client list:
1. From the Main Menu, click Print → Client List.
2. Use the drop down arrow next to Sort Clients by: to choose a sort order for your list.
3. Click the boxes to select any combination of Open, Closed or Non-Clients.
4. Along with these entries, you can print cases. Select the appropriate check boxes to do this.
5. Select Print Preview if you want to see the results on the screen before printing.
6. Click Print. A window for your default printer will appear.
7. Click OK, or change printers and click OK.

If you didn't choose Print Preview, your report will print. If you chose Print Preview, you will see the report on your screen before printing it. For detailed help with the Print Preview Screen, click here.

Print Case Data Sheet Menu

The Print Case Data Sheet menu choice prints a summary report for a particular case. This topic covers the basic choices for this function from beginning to end. Detailed help for each window you see is available by pressing the F1 key or clicking the Help button on each window.

1. From the Main Menu, click Print → Case Data Sheet. Click the Select Case button on the Case Data Sheet Report window.
2. If the case you want isn't shown, use the "Now Showing" drop down arrow to choose a type of contact/client: All Contacts, Active Clients, Closed Contacts, Private Clients or Non-Clients. You can also click the Show/Hide Cases button to perform each operation. Finally, you can use the scroll bar.
3. Select a case. Note that you can also add, update or delete cases. You can also reveal more detailed client information by clicking on the arrow button on the right border.
4. Select Print Preview if you want to see the results on the screen before printing.
5. Click Print. A window for your default printer will appear.
6. Click OK, or change printers and click OK.

If you didn't choose Print Preview, your report will print. If you chose Print Preview, you will see the report on your screen before printing it. For detailed help with the Print Preview Screen, click here.

Print Form Lists Menu

The Print Form lists menu choice prints all master forms in a particular volume. This topic covers the basic choices for this function from beginning to end. Detailed help for each window you see is available by pressing the F1 key or clicking the Help button on each window.

- Alphabetical Order prints a listing of forms in the volume you select in alphabetical order.
- Menu Order prints a listing of forms in the volume you select in numerical order by the document selection number.
- Supplemental prints a listing of any supplemental forms that you have created and added to a volume.
To print a form list:

1. From the Main Menu, click Print → Form Lists.
2. Use the drop down arrow to choose a sort order for your list: Alphabetical Order, Menu Order (in the order forms appear on a volume list), or Supplemental (will print only supplemental forms you've added to a volume).
3. Click Select Volume. Choose a volume from the list. Click OK.
4. Select Print Preview if you want to see the results on the screen before printing.
5. Click Print. A window for your default printer will appear.
6. Click OK, or change printers and click OK.

If you didn't choose Print Preview, your report will print. If you chose Print Preview, you will see the report on your screen before printing it. For detailed help with the Print Preview Screen, click here.

Print Global Questions Menu

This menu choice allows you to print a list of questions that apply to all volumes. You can print either Merge Questions or Assemble Questions.

- Merge Questions ask for information such as names, addresses and dates for a specific case document.
- Assemble Questions are used by ProDoc to determine how to cut and paste clauses/paragraphs in a master form to create a customized document for your specific case.

Use the following steps to print Global Questions:

1. From the Main Menu, click Print → Question Lists → Global Questions.
2. Choose either Merge or Assemble Questions by clicking the button next to your choice.
3. The Print Preview box is selected by default. If you do not want to preview the print job before printing, click the box to deselect the option.
4. Click Print. The Report Destination window appears.
5. Click OK, or change printers and click OK.

If you didn't choose Print Preview, your report will print. If you chose Print Preview, you will see the report on your screen before printing it. For detailed help with the Print Preview Screen, click here.

Print Volume Questions Menu

This menu choice allows you to print a list of questions that apply to a single volume. You can print either Merge Questions or Assemble Questions.

- Merge Questions ask for information such as names, addresses and dates.
- Assemble Questions help ProDoc determine how to cut and paste clauses/paragraphs in a master form to create a customized document for your specific case.

Use the following steps to print Volume Questions:

1. From the Main Menu, click Print → Question Lists → Volume Questions.
2. Choose a Volume by clicking the Select Volume button and selecting the appropriate volume from the Volume Selection Window.
3. Choose either Merge or Assemble Questions by clicking the button next to your choice.
4. The Print Preview box is selected by default. If you do not want to preview the print job before
5. Click **Print**. The Report Destination window appears.

6. Click **OK**, or change printers and click **OK**.

If you didn't choose **Print Preview**, your report will print. If you chose **Print Preview**, you will see the report on your screen before printing it. For detailed help with the **Print Preview Screen**, click [here](#).

**Print Supplemental Questions Menu**

This menu choice allows you to print a list of supplemental questions that you've added to your ProDoc installation to tailor it to your needs. Use the following steps to print **Supplemental Questions**:

1. From the **Main Menu**, click **Print → Question Lists → Supplemental Questions**.
2. Choose a Volume by clicking the **Select Volume** button and selecting the appropriate volume from the **Volume Selection Window**.
3. The **Print Preview** box is selected by default. If you do not want to preview the print job before printing, click the box to deselect the option.
4. Click **Print**. The Report Destination window appears.
5. Click **OK**, or change printers and click **OK**.

If you didn't choose **Print Preview**, your report will print. If you chose **Print Preview**, you will see the report on your screen before printing it. For detailed help with the **Print Preview Screen**, click [here](#).

**Print Worksheets Menu**

The **Print Worksheets** menu choice generates interview questionnaires for clients, reducing the time it takes you to produce documents. This topic covers the basic choices for this function from beginning to end. Detailed help for each window you see is available by pressing the **F1** key or clicking the **Help** button on each window.

There are five different types of worksheets to choose from:

- **Assembly Questions** are those asked during the first phase (assembly or cut-and-paste) of an assembly session.
- **Merge Questions** are asked during the merge phase of document assembly. This prints all questions that may be asked during the merge phase.
- **Custom Merge Questions** creates a "custom" worksheet that contains only those merge questions that would be asked for a specific set of answers to the assembly questions. For instance, using this option for a divorce petition would cause ProDoc to ask how many children there are. If you answer zero, then the worksheet will not include questions that pertain only to couples with children. This option lets you use the answers you previously entered for a case as default answers to the assembly questions and to include the assembly questions and answers in the worksheet.
- **All Questions** prints a list of all questions asked for the selected form(s).
- **All Questions as Asked** prints a list of all questions for the form(s) in the order asked.

Perform the following steps to print worksheets:

1. From the **Main Menu**, click **Print → Worksheets**.
2. Choose a report type by clicking the button next to the desired type.
3. Click the **Select Forms** button. Basic functions of the window that appears are described below.
a. You can find and select one or multiple forms from the volume you select.
   i. You can choose from the sub-volumes on the left; the default is All.
   ii. You can also display the list in Numerical or Alphabetical order by selecting the tabs.
   iii. Once you've added Supplemental forms to a volume you select, you can find these by
        selecting the Supplemental tab.
   iv. Use the Form Sets tab to add the forms from any special sets you have created to the list
        of forms to print. If you have not yet set up any special sets, you can do so by clicking the
        Set up form sets button.
   v. Click the Selections tab to display only the forms you have selected.

b. Click the box next to the forms you want. You can research the forms further:
   i. Click the form title to select the form;
   ii. Click Form Info to see discussion about the highlighted form and/or View to see the form.

c. You can click Find to search for a form by a word or phrase in either the form and title or only
   in the title. You can flip through instances using the Find Previous or Find Next buttons.

4. Select the form(s) for which you want a worksheet. If you chose Custom Merge Questions, you
   may click the Select Case button to select a specific case before proceeding. This is not required.
   However, if you select a case, you can save the answers you provide in the case file.

5. If desired, click the box labeled Show Question Token Numbers. These numbers are assigned
   by ProDoc to identify the questions and control certain other variables. If the box is selected, these
   questions will be displayed in your report.

6. If you chose Custom Merge Questions, the Show Assembly Questions selection box is
   displayed. You may click this box to print the questions that will be asked during assembly of the
   form.

7. Click Print. If you are producing a report of Custom Merge Questions, you will be prompted to
   answer questions before printing. When you are finished, the Report Destination window appears.

8. Click OK, or change printers and click OK.

If you didn't choose Print Preview, your report will print. If you chose Print Preview, you will see the
report on your screen before printing it. For detailed help with the Print Preview Screen, click here.

Print Labels Menu

The Print Labels menu choice displays the setup window for printing mailing labels for all contacts or for
only those contacts you select. This section covers the basic choices for this function from beginning to end.
Detailed help for each window you see is available by pressing the F1 key or clicking the Help button on
each window.

1. Choose a template by clicking on the drop-down arrow field next to Label: Several common label
   definitions are included here, and you can also design your own. See the Tools Menu to do this.
2. If desired, select the Skip Labels box to skip a set number of labels. Select the number by clicking
   the spin arrows in the How many to skip: field.
3. By default, the All Contacts button is selected. If you want to select specific clients, click the All
   Contacts button to cancel the selection.
4. Select specific contacts by clicking the Select Contacts button.
5. Click the Select Contacts button. Choose contacts from the resulting window.
6. The Print Preview box is selected by default. If you do not want to preview the print job before
   printing, click the box to cancel the selection.
7. Ensure you have loaded the appropriate label forms in your printer. Click the Print button.
If you chose print preview, you will see the report on your screen before printing it. For detailed help with the **Print Preview Screen**, click here.

**Print QuickText Menu**

The **Print QuickText** menu choice lets you print a list of QuickText entries you’ve created.

1. From the **Main Menu**, click **Print → QuickText.**
2. Select or unselect **Print Preview** by clicking in the box. Either way, the print window for your default printer appears. Click **OK** to print or to preview the list before printing, depending on your **Print Preview** choice.
3. Click **OK**, or change printers and click **OK**.

If you didn’t choose **Print Preview**, your report will print. If you chose **Print Preview**, you will see the report on your screen before printing it. For detailed help with the **Print Preview Screen**, click here.

**Print Preview Window Menu**

If you selected Print Preview while printing a report, a window similar to Figure 3-18 appears. See the captions on the window for descriptions of icon/arrow functions. You can search, flip through pages, select pages to print and more.

When you’re finished previewing, click the icon to print only the current page, or click the icon to print all pages or the page range you’ve designated.

![Figure 3-18, Print Preview Screen Functions](image-url)
Customize Menu

This menu item brings up a list of settings and information used throughout ProDoc.

NOTE: You must have Supervisor login privilege to access the Manage Users Login.

Document Formatting lets you set default formatting options for word processing documents and forms.

Supplemental Forms and Questions leads you to two sections:

- **Supplemental Forms** allows you to access any forms that you've created and added to ProDoc software's thousands of professionally developed master forms. See Appendix D of the software manual for help on creating your own forms.
- **Supplemental Questions** lists supplemental questions you've added to your ProDoc installation to tailor it to your needs. You can also add, change or delete supplemental questions here.
Default Answers allows you to specify what information is automatically entered when questions are asked by the program. This feature is categorized by global questions, questions for each volume, and supplemental questions. You can also use this menu item to import another user's default answers. This is useful in many situations that arise when different users must work on the same computer.

Edit Forms allows you to edit the master forms (or form templates) used in ProDoc. Use this option to open a forms management window where you can search for forms or select a volume to find the form(s) that you wish to edit. For detailed information on editing forms, see Appendix B and Appendix D.

Form Sets allows you to designate groups of forms and retrieve them by the set name. For instance, if you've identified three forms that you complete for every adoption case, you can group those forms here and label them appropriately.

QuickText lets you save text (e.g., courthouse addresses, favorite clauses) that you may wish to easily recall and re-use in any case, and assign hot keys to these text entries. This helps you avoid retyping repetitive phrases.

(Fif available)

Firm Information lets you enter or edit relevant firm information (except your Firm Name, which is entered during registration) so you can avoid entering it on each document, form or report.

Options brings up the Options and Settings window. You can specify settings and set defaults here for forms, document assembly options, client and case IDs and custom fields, choice of word processor, file name styles and locations, graphic form settings, startup options and backup settings. You can also specify how ProDoc interacts with your word processor and with the Small Office Suite and Timeslips (if these are installed).

Manage Users Login is only available to designated Supervisors. This choice is not displayed in the graphic figures in this manual. This choice opens the Browse Users Records window, which Supervisors can use to manage various user settings.

Document Formatting Menu

This menu allows you to change the formatting properties of word processing documents. These settings do not apply to graphic forms.

While ProDoc has an excellent default format for documents, you can set specific formatting properties if
desired. You can change formatting for all documents (Global Settings), all documents in a Volume, or individual documents. This feature gives you complete control over how your finished documents appear when printed. When you select **Document Formatting** from the menu, the **Default Formatting** window appears. A description of the window and its functions follows.

When you choose **General Formatting**, the **Default Formatting** window appears. The window opens with **Global Settings** highlighted. In the navigation tree, this is designated with the Globe icon. To change formatting for all documents in all volumes, click the **Update Settings** button at the lower right corner of the window. If you navigate elsewhere on this window and then decide to change global settings, click anywhere on the **Global Settings** line to highlight it, then click **Update Settings**.

To change settings for all documents in a **Volume** (designated with the icon) or for an individual document (designated with the icon), you can click the desired volume or document, then click the **Update Settings** button. You will not be able to update settings by chapters (icon); these only group related forms. There are several methods for finding the volume or document that you want:

- Type a word or phrase into the box at the bottom left corner of the window and click the **Find Text** button. The search process will find instances of the text in volume and document titles and open the navigation tree to reveal a match. Click the **Find Text** button again to reveal the next match if needed. Click **Update Settings** when the item you want is highlighted.
- Use the **Show/Hide all Documents** button to either display or hide all documents. Selecting "Show" will take some time; it fully expands the navigation tree on the left side of the window. Hiding all documents makes it easier to scroll to volumes. Use the scroll bar at the right of the window to scroll to the item you want, click it, and then click **Update Settings**.
- Use the left side tree to drill down to a volume or document. Click to expand a category and to shrink the category header. Click the item you want, then click **Update Settings**.

After you click **Update Settings**, the Document Formatting Options window appears, similar to Figure 3-23. This window has two tabs - **Standard** and **Advanced**.
The **Standard** tab is selected by default. It allows you to set default standard formatting options: font type and size, margins, line spacing and text justification. Click in each box and/or use drop down arrows to change settings. The formatting options work almost exactly the same as those in popular word processing programs, with an important exception: the **Ignore global and volume formatting settings**. If you check this box, the document will be produced with the exact settings shown in the window and global/volume configuration files will be ignored. If you don’t check it and leave some features unchanged, global and volume settings will be used for the unchanged features.

**Document Formatting Window Terms Explained**

- **Font** – The particular style of type used in your document.

- **Name** - Name of the font for use. This includes the most popular proportional serif (Times New Roman and Roman) and sans serif (Arial) fonts. The default font is Times New Roman, unless an agency form requires a different font.

- **Font Size** - Size of the font in points. One point is 1/72nd of an inch, so 12 point type would be 1/6th inch high. Standard sizes for most correspondence is 10 point or 12 point type.

- **Margins** - Margin size in fractions of an inch. Margins of one-half inch would be entered as 0.50 while margins of one inch would be entered as 1.00. You can specify settings for **Left**, **Right**, **Top**, and **Bottom** margins.

- **Line Spacing** - Spacing between lines. Normal type is single-spaced, and you can enter whole numbers and fractions. For single spacing enter 1.00, and for double spacing enter 2.00.

- **Justification** - **Left-justified** text has a smooth left edge and ragged right edge, while **full-justified** text has smooth right and left edges with variable spacing between words. **Right-justified** text results in a smooth right edge with variable spacing between words. **Center** is rarely used in documents since both sides are uneven. You can specify settings for **Left**, **Full**, **Center**, and **Right** justification. Using full justification with mono-spaced type (Courier New) may result in excessive spacing between letters. If you use full justification, you should also use a proportional font, such as Times New Roman.

- **Ignore Formatting Settings** - The Volume Formatting Options window contains an **Ignore global formatting settings** check box. If it is checked, the value set in the form is used for any formatting item that is unchecked in the Volume Formatting Options window instead of the value set in the Global Formatting Options window. The Specific Documents Formatting Options window also contains an **Ignore global and volume formatting settings** check box. If it is checked, the value in the form is used for any formatting item that is unchecked in the Specific Document Formatting Options window.
instead of the value set in either the Global or Volume Formatting Options windows.

How does ProDoc Prioritize Formatting?

Global, Volume and Specific Document formatting values can all apply to a particular document. Here's how ProDoc determines which to use:

1. If there is a Specific Document value for the particular setting, ProDoc uses it.
2. Otherwise, if there's a Volume value for the setting and "Ignore global and volume formatting settings" was not checked in the Specific Document Formatting Options window for the document, ProDoc uses the Volume value.
3. Otherwise, if there is a Global value for the item and "Ignore global and volume formatting settings" was not checked in the Specific Document window for the document, and "Ignore global settings" was not checked in the Volume Formatting Options window for the volume containing the document, ProDoc uses the Global value.
4. Otherwise, ProDoc uses the value in the ProDoc form.

NOTE: The sources for formatting item values are determined item by item. A document might be assembled using a Specific Document line spacing value, a Volume left margin value, a Global justification value and the font in the ProDoc form.

Formatting option settings apply only to the user who created them. To make the formatting option settings of one user available to another user, you must copy the files that contain the settings. Global formatting option values are stored in a file called XXXGCFG.INI in the ProDoc home directory where "XXX" is the initials of the user who created the settings. The volume and specific document settings are stored in files called XXXCFG.INI in the volume subdirectories. To make the settings available to user YYY, copy XXXGCFG.INI to YYYGCFG.INI and each of the XXXCFG.INI files to YYYCFG.INI. This will overwrite any formatting option settings that user YYY might have had.

Click the Advanced tab to create a configuration file for such things as headers and footers, page numbers, fonts, and the like.

![Figure 3-24, Document Formatting Options, Advanced](image)

You can click Create to open your word processing program and create an advanced configuration file. If you've already created an advanced configuration file, Edit enables you to open your word processor and make changes to it. Delete lets you delete it.

You can refer to your particular word processor's documentation to determine how to create a file containing headers, footers, etc. When a document is assembled, ProDoc checks for the presence or absence of
configuration files, and if one or more configuration files that apply to the document exist, ProDoc inserts the highest priority configuration file into the document. Note: If the configuration file sets the value of one of the Formatting Options items, e.g. left margin, the value set in the formatting window takes precedence and will override the value in the configuration file.

Configuration Files
There are three types of configuration files:

- The global configuration file applies to all documents and has the lowest priority. It is stored as GLOBAL.CIF in the ProDoc home directory.
- A volume configuration file applies to all documents in one volume. Each is stored as VOLUME.CIF in the subdirectory of the volume to which applies.
- A specific document configuration file applies to a single document. Each is stored as DOCNAME.CIF, where "DOCNAME" is the filename of the form from which the document is generated, in the subdirectory of the volume containing the form.

To create a global configuration file, click the Create button. If your word processor is not running, a dialog box will ask you whether you want to start it. Click Yes to start your word processor. Once your word processor is running, add the formatting features you want. The procedure will differ depending on which word processor you use.

Headers, footers and normal text items can be added. You can also insert such things as symbols, the date and/or time, and page numbers. Follow your word processor's guidance on creating or inserting items other than normal text. You may also insert ProDoc codes as text, such as ~P0001G, which during document assembly causes ProDoc to ask the user to enter the name of the law firm and then replace all occurrences of ~P0001G with that answer.

Many customers choose to have the name of the document and the case style show up in their headers or footers. To do this, insert the code ~I9100G into headers and footers. The code for the Petitioner's name is ~M1200G and the Respondent is ~M1300G. To set up the header or footer to show the case style, you should enter ~M1200G v. ~M1300G.

After you have entered your desired contents, select File/Save. The Save File window will appear. The correct filename is GLOBAL.CIF for a global configuration file, VOLUME.CIF for a volume configuration file, and DOCNAME.CIF where "DOCNAME" is the name of the form to which the configuration file applies.

Save Global Configuration files to the ProDoc home directory. Save a Volume or Specific Document configuration file in the volume's subdirectory. You should save the file as a WordPerfect 5.X file and surround the file name with quotation marks (e.g. "GLOBAL.CIF") in order to avoid having your word processor append its unique file extension. Some Word users may only be able to save the document as a Word Document. After saving the file, exit your word processor and return to ProDoc. Subsequently assembled documents to which the configuration file applies will contain your additions or changes.

Supplemental Forms and Questions Menu

Supplemental Forms allows you to access any forms that you've created and added to ProDoc software's thousands of professionally developed master forms. See Appendix D of the software manual for help on creating your own forms.

Supplemental Questions lists supplemental questions you've added to your ProDoc installation to tailor it to your needs. You can also add, change or delete supplemental questions here. Clicking this choice brings up the Volume Selection window. Choose a volume that holds supplemental questions you've created, or one to which you want to add supplemental questions, and click OK. A window appears, similar to Figure 3-25. Either a list of supplemental questions you've created for the volume is shown, or the window will be blank if you are adding questions to a particular volume for the first time.
To add a new question, click **New**. To update or delete a question, click the question and click the appropriate button.

You can click the **Change Volume** button at the bottom of the window to view supplemental questions in a different volume, or add them to the volume.

When you click the **New** or **Update** buttons, a window appears similar to Figure 3-26.

Use this dialog window to add or change supplemental questions, their tokens and size parameters.

You need to complete four fields for a new question:

- **Tokens** must only start with a P, followed by 4 alphanumeric characters, i.e. "P00A1." Special characters are not allowed.
- **Question** is the text of the question you want the user to see.
- **Rows** is the number of rows (lines) you want to make available to the user to enter an answer.
- **Columns** is the number of columns you want to give the user to answer the question. The maximum number of columns allowed is 65. The number of characters that can be entered to answer the question is generally determined by multiplying Rows by Columns.

After you have entered all the appropriate information, click the **OK** button. Your new supplemental question will now appear in the window.
Default Answers Menu

Default Answers menu choices in Figure 3-27 allow you to specify the answers displayed when questions are asked by the program. This includes answers for global questions, questions for each volume, and supplemental questions. You can also use this menu to import another user's default answers. This is useful when different users must work on the same computer or support multiple attorneys.

**Default Answers** are answers that automatically appear as the proposed answer when a question is first asked. If the default answer which appears is the correct answer, then you do not have to type or select the answer. You just accept the default answer and continue on to the next question. If not, simply make a different selection or type in the answer you want.

Many questions will often have the same answer, such as the attorney’s name and bar number. You can save a tremendous amount of time and effort by setting default answers, and ProDoc makes the process of setting answers extremely easy.

**NOTE:** The procedures in this section do not apply to setting default answers for Firm Information fields, such as firm's name, address, phone/fax, email address and Web site. Click the Firm Information in Answers link to see how to set default answers for these items.

You can scroll through the questions in a volume and set default answers for any of the questions. From the Main Menu, click Customize → Default Answers. This brings up the Default Answers drop down menu where you can select Global, Volume or Supplemental Questions. Global questions apply to all volumes, Volume questions apply to a specific volume (such as Family Law), and Supplemental questions are questions which you have added to a volume. For example, selecting Global Questions brings up a Set Default Answers window like the one shown in Figure 3-28. Setting default answers for Volume and Supplemental questions (if any) is done in the same manner.
To create default answers, follow the steps below. The procedure is the same for Global, Volume and Supplemental questions, with one exception: for Volume and Supplemental questions, you must select a volume before seeing the questions.

1. Select the desired Default Answer Set using the drop down arrow. After selecting the set, you can scroll down and pick questions, or click Find to enter words to find one time or many times.

   NOTE: We recommend that you concentrate first on establishing defaults for your primary set. Then, when you feel that your primary set is firm, create optional sets by first copying your primary set or another user's primary set. This will save you from having to make double entries.

2. Double-click the question you want to answer, or click the question and click Update Default Answer.

3. In the window that appears, double-click the answer, or click it and click OK. You can also click OK to accept the highlighted answer. If the answer is a fill in the blank, type the answer or use a QuickText entry to answer it.

4. Repeat until you've set up all the default global answers you'd like to use.

After you've created a default answer for a question, a check mark will appear in the box next to the question in the Set Default Answers window. You can use the Find button to find a particular question. To update a default answer, highlight the question and click the Update Default Answer button. To delete a default answer, highlight the question and click the Remove Default Answer button.

Another way to set default answers is to do it during document assembly. Many users find it much easier and more convenient to set default answers this way. To do this while assembling documents:

1. Begin document assembly and work through the procedures to the question phase.
2. Select or type the answer you want to set as a default answer.
3. Click the Set as Default Answer button.
4. Select Yes on the confirmation window.

From that point forward, every time that question is first asked during document assembly, the default value will be displayed. This only changes if it is preempted by an answer you gave during a prior assembly session using the same case, or by a default answer calculated by ProDoc. To change the default answer, repeat the above steps. Also note that default answers are stored in the default answer sets. If you save answers in an optional set, the answers will only appear when you assemble documents while using the optional set.

Creating Default Answer Sets
This menu choice allows you to create a new default answer set or add a set created by another user. This is useful in many situations that arise when different users must work on the same computer or support multiple attorneys. From the Main Menu, click Customize → Default answers → Default answer sets. A window similar to Figure 3-29 appears.

This window allows you to create optional sets of default answers which you can pick from a drop-down list to use during an assembly session. For example, if a secretary prepares documents for three attorneys, a default answer set could be created for each attorney.

This doesn't change the default answer set that appears automatically during an assembly session. For help on choosing which set appears by default, see Assembly Session Settings [58].

The PRIMARY SET is the set containing all default answers that were entered before any optional sets were created. You can click the New button to create a new set, the Change button to change the name of the highlighted set, and the Delete button to delete the highlighted set.

Figure 3-29, Default Answer Sets Window

To create a new set, click the New button. A Default Answer Set Name dialog window appears, similar to Figure 3-30. Note that if you are working in ProDoc for the first time on a new installation, there are no other user sets to copy.

This browse window lists all of the default answer sets you can copy and use.

The New and Change buttons add new sets and change the names of existing sets, while the Delete button removes a default answer set from your list of sets.

Figure 3-30, Adding a Default Answer Set

Type in the Set Name, click the drop-down box to choose which Existing set to copy, then click the OK button. Your Primary Set and any added new sets will now appear in the Default Answer Set window and will be available for use when you begin assembling documents.

Using Default Answer Sets. You specify which default answer set to use for an assembly session when you reach Step 4 of the Starting Document Assembly window. If optional default answer sets exist, the window will contain a Default Answer Set drop-down box. Select the set you want to use from choices in the drop-down box. If no optional default answer sets exist, the window will not contain a Default Answer Set drop-down box, and the PRIMARY SET will automatically be used.

Specifying the Default Answer Set for Assembly Sessions. If you've added any optional sets, you can specify the one that appears by default during an assembly session. Click Customize → Options, then click the Assembly Settings link on the left side of the Options and Settings window. Select the set you want to appear automatically from the drop-down list in the first field. You can still use any available set
during an assembly session.

**Edit Forms Menu**

**Edit Forms** allows you to edit the master forms (or form templates) used in ProDoc. Use this option to open a forms management window where you can search for forms or select a volume to find the form(s) that you wish to edit. For detailed information on editing forms, see Appendix B and Appendix D.

**Form Sets Menu**

Form sets are groups of forms that you often assemble at the same time. Using the Form Sets option, you define different sets of forms. All forms in the set can then be selected in the **Select Forms** window by selecting the form set rather than selecting each of the forms individually. For example, if you frequently prepare adoptions documents, you could define a form set called Adoption Starter, consisting of the forms in Figure 3-31. In order to select all of these forms at once, you could simply click the **Form Sets** tab in the **Select Forms** window and choose the "Adoption Starter" set.

Here is a step-by-step example showing how to create a form set:

**Creating Form Sets.**

![Figure 3-31, Browse and Update Form Sets Window](image)

Click **Customize → Form Sets.** The Volume Selection Window appears. Select the volume you want to define a form set for. For this example, click **Family Law** and click the **Select** button to select the volume. The **Browse and Update Form Sets** window is shown in Figure 3-31. If you need a different volume, click the **Change Volume** button.

This is where you define your form sets. The **Sets** tab lists any existing sets in the volume. The **Forms for set** tab contains a list of the forms in the highlighted form set. The **New Set** button lets you create a new form set. The **Update Set** button lets you change the name of the highlighted form set. The **Delete Set** button allows you delete the highlighted form set. The **Update forms** button lets you add or delete forms to or from the highlighted form set.

To create a form set, click **New Set.** The **Form Set Name** box appears. Type the name of the form set, "Adoption Starter", then click **OK** to return to the **Browse and Update Form Sets** window. A form set named "Adoption Starter" now exists and appears in the list of form sets. It does not yet contain any forms. To add forms to the set, make sure the set name is the highlighted form set and then click the **Update Forms** button. A **Selecting Forms** window appears. Select all the forms that you want the form set to contain. Click **OK** to accept your selections and return to the **Browse and Update Form Sets** window. The forms you selected appear in the forms list in the **Forms for set** tab. You may return to the main menu by clicking the **Close** button.

**Using Form Sets**
Using a form set to select multiple forms to assemble is as easy as selecting a document. After selecting a volume during document assembly, a Select Forms browse window will appear. If one or more form sets have been defined for that volume, a Form Sets tab will be present. Click the Form Sets tab to see a list of the form sets. To select all of the forms in a form set, double-click the form set or highlight it and then click the Select button. The window will then switch to the Selections tab, which contains a list of all forms currently selected for assembly. If you want to deselect one of the listed forms, highlight the form and click the Clear Selection button. If you wish to select additional forms, click the Numerical, Alphabetical or Form Sets tab.

**QuickText Menu**

Click Customize → QuickText to see a window similar to Figure 3-32. This menu choice allows you to pre-define clauses or paragraphs you commonly use for answers. When you need to insert that clause into an answer, simply select the clause from this list. You can also set up a QuickText entry to automatically insert today's date. You can assign a hot key to any clause, and you can press that particular key combination to automatically insert the clause. For example, you could set up Ctrl-D as the hot key to insert today's date into an answer.

There is no limit to the number of entries you can have, and each can consist of over 3,000 characters.

The New and Update buttons add and change QuickText entries, while the Delete button removes entries. You can also double-click on the name of the QuickText entry to open the dialog window and edit the text string, or right click on a QuickText entry to bring up a drop-down menu to add, update, or delete an entry. The Copy QuickText button allow you to copy another user's entry for your own use.

**Add/Update QuickText Records.** To add or update a QuickText entry, click the New or Update button. The QuickText dialog box will appear. Enter the name of the QuickText entry and the text that will be pasted into the fill-in-the-blank answer. The name should be descriptive so you can easily find a QuickText entry during document assembly. Text can be entered as a single line or as multiple lines formatted as you would like it to appear in the finished document.

A QuickText entry can also be used to paste the current date rather than a fixed block of text. To create such an entry, select the Date option. The text field will be replaced with a drop-down box containing all the available date formats. Select the how you want the pasted date to be displayed. You may assign a hot key to any QuickText entry using the Hot Key drop down box.

**Delete QuickText Record.** To delete an entry, highlight it and click Delete. You will be asked to confirm the deletion before the entry is removed.

**NOTE:** To use a QuickText entry to paste a text block or the current date into a fill-in-the-blank answer, move the cursor to the point in the answer where you want the entry to be inserted. Then click QuickText. This brings up the QuickText Selection window. Highlight the desired entry and click Select. The question window will appear with the entry pasted into the answer.
Alternately, you can use a hot key to paste a QuickText entry with a single keystroke. After moving the cursor to the point in the answer where you want the entry inserted, simply press the hot key for the entry. The entry will be inserted without you having to bring up the QuickText selection window.

**Copying a QuickText Entry.** Click the **Copy QuickText** button. The window that appears is depicted in Figure 3-33. This window allows you to copy other users’ QuickText records for your own use. The window displays other users who’ve created records and the records they’ve created in a tree format. You can select individual records to copy, or you can copy all the entries made by another user.

You can click the **Show/Hide Description** button to toggle between displaying only users (denoted by the icon) and displaying users and their records (denoted by the icon).

You can click the icon to expand a user tree and reveal records. You can click the icon to contract a user tree and hide the records.

To select one or more QuickText records to copy:

1. Click a record to highlight it. The actual entry will then be displayed on the right side of the window. If the entry is a date, the format for the entry will be shown.
2. Click the **Select** button to select the highlighted entry. A green check mark will appear next to the entry on the list. Repeat this process for any entries you wish to copy.
3. If you wish to select all QuickText entries for a particular user, click the user’s login name or initials and click the **Select** button.
4. Click the **UnSelect** button to remove a highlighted entry from your selections. Click the **UnSelect All** button to remove all selections and start over.
5. When you are satisfied with your selections, click the **OK** button. A message window will appear telling you that your selections were copied. If you want to print the information displayed in this window, click the **Print** button.
6. Click the **Close** button to return to the **QuickText** browse window, where your selections will appear.

**Firm Information Menu**

Click **Customize → Firm Information** to bring up the **Firm Information** box on the **Options and Settings Window** (Figure 3-34).
Information you enter here becomes part of ProDoc software's global information database and selectively becomes available for insertion for applicable questions during document assembly. Fill in all fields and click the OK button.

**Options Menu**

From the main menu, you can click **Customize → Options** to choose virtually all of your system settings. Each of the settings listed on the left side of the **Options and Settings** window, shown in Figure 3-35, is explained in detail in its own section, in the order shown on the window.

**Assembly Settings**

Click the **Assembly Settings** link on the **Options and Settings** window to bring up a box similar to Figure 3-36. These settings control the ways in which you and ProDoc interact while you assemble documents. Use the drop down arrows and check boxes to change settings as desired.
This window permits you to set the following defaults:

**Default Answer Set** – The "Primary Set" appears in this field. If you have created any optional default answer sets, you can reveal these by clicking the down arrow. The set you select here will be automatically used by ProDoc when you assemble forms and print custom worksheets.

**Insert placeholder** – This field is used to tell ProDoc to insert a placeholder any place where you skipped past a question without entering an answer. You can enter anything you like here; a common entry is a long blank line, "______".

**Show assembled document during merge phase** – The second phase of a document assembly session is called the merge phase, where you fill in blanks with names, addresses, dates, etc. If you select this option, the assembled document will be displayed on screen so that you can actually see the blank you are filling in. If you do not select this option, each question will pop up in a dialog box and you will be provided with a field to enter your answer, which will later be merged into the document.

**Add assembled documents to Word Processor's most recently used file list** – You will want to leave this checked since newer versions of WordPerfect and Microsoft Word display the most recently opened documents at the bottom of the drop-down Files menu. ProDoc automatically adds documents to that list as they are assembled if this option is selected.

**Switch to Word Processor after assembly** – After assembling documents, ProDoc can automatically start your word processor and open the file(s) just assembled. This allows you to instantly edit and print the assembled document.

**Assemble RTF documents if using Microsoft Word** – After assembling a WordPerfect document, ProDoc will convert it to RTF format if your word processor is Microsoft Word and this option is selected. You will usually want to select this option since Microsoft Word displays and prints RTF files more accurately than it displays and prints WordPerfect files. Selecting this option has no effect if your word processor is WordPerfect.

**Review prior answers** – This setting controls the default setting for the Review prior answers check box when you start an assembly session. If you check this box, you will be asked all document assembly questions during subsequent assembly sessions by default. If you want to skip questions you have already answered during document assembly, you will need to uncheck the Review prior answers box on the Starting Document Assembly window. If you want the most flexibility, leave this box unchecked.

**Word Processor DDE Timeout** – Leave as is. ProDoc interacts with your word processor using a process known as Dynamic Data Exchange. On some systems, particularly networks, the process of starting up a word processor and sending messages back and forth may be slower than normal. If you are having problems such as Invalid page fault, Illegal operation, etc. when ProDoc attempts to start or switch to your word processor, try increasing the value in this field by 30 seconds at a time. This tells ProDoc to wait longer.
before it determines that a DDE transaction failed.

**Word Processor Settings**

Click the **Word Processor** link on the **Options and Settings** window to bring up a box similar to Figure 3-37. This option box allows you to change your word processor and install a ProDoc toolbar in the program.

![Word Processor Settings](image)

Figure 3-37, Word Processor Settings

This screen lets you see what word processor you are using with ProDoc. ProDoc automatically finds and sets up your word processor when it is installed. This screen allows you to change to a different word processor than the one noted on the screen. Having the correct word processor chosen is very important in controlling a number of features that help you save time in document assembly.

Normally, you will not need to change this setting. However, if you prefer to change to a different word processor or your word processor is not displayed on the screen, you may browse to the word processing program you use:

1. Click the large button titled **If there is no Word Processor in the list above, or if you prefer to use another one, click here to select another Word Processor**.
2. Two fields open underneath the button you clicked.
3. Click the drop-down arrow to the right of the top field and you will see a list of word processors to choose from. Locate your word processor on the list and highlight it. If it is not listed, click **Other**.
4. Click the folder icon that appears to the right of the **Location of Word Processor** field.
5. The **Select your Word processor** box appears.
6. Browse to the executable file for your word processor. Executable files have the extension ".exe" at the end of the file name.
7. Highlight the correct file and click **Open** to place the full command line path in the dialog box.
8. Click **OK**.

If you select **Other**, please note that ProDoc software only fully supports the use of Microsoft Word and WordPerfect. However, you can open ProDoc documents with any word processor which can open and work with Rich Text Format (RTF) files. ProDoc software's normal word processing interactions will not function with unsupported word processors. At a minimum, you will have to open completed documents manually.

**Installing a ProDoc toolbar in your word processor**

To install a handy document manager toolbar in your word processor, click the **Install a ProDoc toolbar in...** button at the bottom of the screen. The ProDoc toolbar that now appears in your word processor features icons (with descriptive tool tip pop-ups) that perform the following functions when you click them:

- **Start ProDoc or toggle to ProDoc if already running.**
Start a new document. A dialog window appears where you can fill in the indicated fields. You can associate your new document with an existing ProDoc client and case for tracking purposes. Click the drop down arrow to the right of each field to select the client and case.

Open an existing document.

Save the opened document.

Search for documents using key words or advanced matching options.

Removing the ProDoc toolbar and menu choice from WordPerfect

To remove the ProDoc toolbar and menu selection from WordPerfect, open WordPerfect. On the menu, click Edit and then Settings. Click the Customize icon in the Settings box. The Customize Settings box appears. To remove the ProDoc toolbar, select the Toolbars tab and remove the check from the ProDoc Organizer check box. To remove the ProDoc menu selection, select the Menus tab and highlight ProDoc Organizer. Click Delete and then click Close.

Removing the ProDoc toolbar and menu choice from Word

To remove the ProDoc toolbar and menu selection from Word, open ProDoc and click Customize → Options. Click the Word processor link on the left side of the window. Click the Remove Word Processor Toolbar button.

Completed Documents Settings

Click the Completed Documents link on the Options and Settings window to bring up a box similar to Figure 3-38. This option box allows you to specify file locations for finished documents; choose a folder naming convention; and choose a default file name type.

Use this window to specify the way you want ProDoc to work during a document assembly session. The following default options can be set from this window: Folder for Completed Documents and Filename of completed documents.
Folder for Completed Documents

Folder – The location specified in this window is used as the default location in the Starting Document Assembly window. Generally, this will be something like F:\\clients if you are a Network user or C:\Clients if you are single user. If you want to choose the directory from a browse listing, click the browse button to the right of the box and select the drive and directory from the directory browse window. Any path components specified above are appended to the directory.

Folder Name Components – You can choose to store assembled documents in subfolders under the folder specified above. Subfolders will be based on the client name or client ID and the case description or case ID for the client and case selected for the assembly session. To select the components to use, click the down arrow to open the drop down list box. To select a path component set from the list, click it. The following list shows the locations that correspond to the various path component sets with a folder of "F:\\clients" for an assembly session using the client "John J Smith" with a client ID of "ALS-SJJ-123" and the case "Divorce" with a case ID of "SJJ-DIV".

Folder Name Components....Location
Directory\Client Name....F:\\clients\Smith, John J
Directory\Name\Case Description....F:\\clients\Smith, John J\Divorce
Directory\Client Name\Case ID....F:\\clients\Smith, John J\SJJ-DIV
Directory\Client ID....F:\\clients\ALS-SJJ-123
Directory\Client ID\Case Description....F:\\clients\ALS-SJJ-123\Divorce
Directory\Client ID\Case ID....F:\\clients\ALS-SJJ-123\SJJ-DIV
Directory\Case Description....F:\\clients\Divorce
Directory\Case Description\Client Name....F:\\clients\Divorce\Smith, John J
Directory\Case Description\Client ID....F:\\clients\Divorce\ALS-SJJ-123
Directory\Case ID....F:\\clients\SJJ-DIV
Directory\Case ID\Client Name....F:\\clients\SJJ-DIV\Smith, John J
Directory\Case ID\Client ID....F:\\clients\SJJ-DIV\ALS-SJJ-123

NOTE: Any blank components, such as a blank Case ID, are omitted. If no case is used for the assembly session, no components are appended to the folder.

Filename of completed documents. By default, the Use form title for filename box is checked. When this box is checked, ProDoc will use the title of the form as the filename of the document you assemble. The filename cannot be changed in the Starting Document Assembly window. Also, fields for entering filenames for clients and cases will be removed from the Client Dialog Window and Case Dialog Window.

If you remove the check from this box, you can specify a filename for all documents you assemble in the field provided. You can change this filename in an assembly session.

If you assemble the same document for a case more than once, ProDoc will use the filename you specify and add "#2" to the filename. The numerals advance as instances occur.

Graphic Forms Settings

Click the Graphic Forms link on the Options and Settings window to bring up a box similar to Figure 3-39. The options here let you customize settings for filling, completing and printing graphics-type forms.
This window allows you to customize settings for completing and printing graphics forms. In most cases, the default settings will result in an excellent finished product. A description of the fields and choices follows:

**Shrink to fit when printing** - ensures graphic forms designed for one page actually print on one page without border breaks to a second page.

**Do not prompt for manual duplex** - this refers to a prompt which will ask you if you want to print on both sides of the paper. When this box is checked, the prompt is disabled.

**No duplex even if printer supports it** - when checked, disables printing on both sides of a page.

**Duplex Direction** - can be **horizontal** or **vertical**. Horizontal will result in a two-sided printed page that you can pick up from the bottom to read the back. Vertical will print the back so that you can flip the right edge and read the back.

**Typeface** - identifies the default typeface for filling a form. You can change this typeface by clicking the drop-down arrow in the field and clicking on a different typeface.

**Point Size** - One point is 1/72nd of an inch, so 12 point type would be 1/6th inch high. Standard sizes for most correspondence is 10 point or 12 point type. You can change this by manually typing the entry in the field.

**Squish Percent** - the relative size of the form's width as it is displayed in ProDoc. You can change this with the spin button or by typing the percentage you want in the field.

**Style** - Can be set to normal (nothing checked) or **Bold**, **Italic**, or **Underline**. To use a style, click the box next to the style you want to use.

**Initial Zoom** - the relative size of the entire form as it is displayed in ProDoc. You can change this by using the drop-down arrow and selecting the percentage you want from the choices displayed.

### WebUpdate Settings

**WebUpdate** runs automatically the first time ProDoc is opened, by default. When you start ProDoc, the program checks the ProDoc server for updates. If updates are available, a window is displayed listing these updates. You can change the setting by clicking Customize \(\rightarrow\) Options \(\rightarrow\) WebUpdate and checking or clearing the **Disable WebUpdate** check box. If you disable WebUpdate, you can manually check for updates anytime by clicking Tools \(\rightarrow\) Check for Updates.

If the feature is enabled, the program will check the ProDoc software's online server for updates needed for your installation when you initially run ProDoc each day. A box will appear indicating that ProDoc is checking for updates. If no updates are found, the box closes. If updates are available, the **Updates for ProDoc are now available** window appears. You have three choices on this window:

- Click **Download and Apply All Updates** to download all updates. The updates will be downloaded, and a window will be displayed which tells you the updates have been downloaded. You
will be prompted to restart ProDoc to install the updates. After ProDoc restarts, the downloaded updates will be installed.

- Click **Select Updates to Download and Apply** to open a window displaying available updates and a description of each update available. The selection box for each update will be checked. We recommend you download each available update. If you want to exclude an update from download, click the update's check box to clear it, and the update will not be downloaded. Click **Begin Download** to download the selected updates. If you don't want to download updates at this time, click **Cancel**.

- Click **Do Not Download Updates at this time** to close the update window without downloading any updates.

### Miscellaneous Personal Settings

Click the **Miscellaneous Personal Settings** link on the **Options and Settings** window to bring up a box similar to Figure 3-40. These options include the ability to show/not show the Quick Start Assistant or the Quick Click Menu; use/not use the ProDoc software's PDF Reader to view Adobe PDF documents; and restore ProDoc software's original window positions for all windows.

![Figure 3-40, Miscellaneous Personal Settings](image)

This window allows you to set miscellaneous defaults that only take effect when you log in to ProDoc.

**Quick Start Assistant (Beginner)** - When this button is selected, ProDoc automatically brings up the Quick Start Assistant for your use after you log in. This is recommended for beginning users.

**Quick Click Menu (Advanced)** - When this button is selected, ProDoc automatically brings up the Quick Click Menu for your use after you log in. This is recommended for users who are familiar with the program.

**None** - When this button is selected, neither of the above starts.

**Use the ProDoc PDF Reader to view PDF Documents** - When checked, ProDoc will use its embedded PDF reader to view PDF documents. If unchecked, Adobe Reader or another program you've designated on your computer to open PDF documents will start and display PDF documents when you select these while working in ProDoc. If you have Adobe Reader, you would normally want to uncheck this box.

**Restore Window Position** - Click this button to reset all ProDoc windows to appear in their original positions and size.

**Reset Volume Banner Screens** - Click this button to have ProDoc display volume banner screens when you assemble documents.
**Reset Legal Size Reminder** - Click this button to set the legal size paper reminder for printing on and off.

**Backup Settings**

Click the **Backup** link on the **Options and Settings** window to bring up a box similar to Figure 3-41.

![Backup Settings](image)

Figure 3-41, Backup Settings

The choices on this window control backup settings. We recommend you use the settings shown in Figure 3-41 unless you are a Small Office Suite user.

**Auto Backup at exit** - If you do not use SOS, you should ensure this option is selected. If this option is selected, ProDoc will periodically automatically make backup copies of client and case data files when you exit ProDoc. The backup copies are stored in the ProDoc home directory by default, but you can save these in any valid drive/folder by changing the entry in the **Backup folder** field. **SOS subscribers should leave this box unchecked.** This is recommended because SOS backs up more data files, and using ProDoc backup and restore can damage SOS data files.

If you have SOS installed and you select **Auto Backup at exit**, you will see a warning screen when you click **OK** on this window. The warning tells you that you should use SOS for backing up your data. The warning screen provides a **Disable Backup** button to disable automatic backup in ProDoc. If you click the button, you will see a window confirming that the automatic backup is disabled. The window will also ask you to enable automatic backup in SOS.

If **Auto Backup at exit** is not selected, the remaining fields here are disabled.

**Days between backups** - Specifies how many days to skip between performing automatic backups. No backup is done if the difference between the current date and the date of any existing backup copies is less than the frequency. If the frequency is zero then a backup is always done.

**Station triggering automatic backups** - Ensure that this field contains the log in identification of a person in your office who regularly uses ProDoc.

**Backup folder** - Specifies the folder which receives backup data files. The default is the ProDoc installation folder. You can type in another folder name or use the browse folder button next to the field to select another folder.

**Small Office Suite (SOS) Settings**

Click the **Small Office Suite (SOS)** link on the **Options and Settings** window to bring up a box similar to Figure 3-42. The box helps you designate amounts to charge, using SOS charge slips, for assembled documents. If you have SOS installed, you can designate billing amounts for documents and automatically generate charge slips when you complete a document. See the **SOS Manual** for detailed help in setting up billing options and using charge slips in SOS.
Enable the Generation of billing slips in SOS for documents assembled. (Requires SOS) – Place a check in this box if you would like to enable the feature that allows you to automatically bill your clients in SOS for the documents that you assemble. To select documents and specify amounts:

1. Choose a Volume by clicking on the drop down arrow field.
2. Arrange the list of volume forms either by Numerical or Alphabetical order by clicking the appropriate tabs.
   a. If you list forms numerically, you can also use the Contract All or Expand All buttons to reveal chapters only or all forms grouped by chapters.
   b. In a numerically ordered list, you can also click the button or button to reveal or hide forms in a chapter.
3. If desired, you can click the Form Sets tab to display a form set you've created. You can then specify the amount you want to charge for the complete set.
4. Select the desired form by clicking it once. Click the Edit Amount button and enter the desired dollar amount to charge for assembling the document.
5. Repeat the process as needed.

Generating Charges in SOS for Completed Documents

If you have enabled the feature, the Charges to Generate In SOS window appears after you have assembled one or more documents listing an amount to charge. This window only opens if you used a case file. The information that appears on the screen is the Activity/Doc Name, Fee Charged and Timekeeper.

If a T appears before a charge on the list, it means that the charge will not be billed but will be tracked for the case. If a B appears before a charge on the list, it means that the item will be billed to the case. You may choose whether to Track or Bill charges by highlighting the charge and clicking on the Track this Charge (Will Not Generate a Billable Slip) or Bill this Charge (Will Show as a Billable Slip) buttons that appear in the Charge Tracking/Billing field of the Charges to Generate In SOS window.

Highlight a charge and click the Edit Charge button to adjust the Activity Name, Fee or Timekeeper. If you want to remove the charge so that it does not appear in the Charges to Generate In SOS window, highlight the charge and click the Delete Charge button. Clicking the Consolidate All button will allow you to generate one flat fee slip for the total amount of the documents that have been assembled instead of separate slips for each document's specified amount. Click Generate Charges to create SOS billing slips for the documents that have been created. Click Cancel Charges to close the Charges to Generate In SOS window.
Timeslips Settings

Click the **Timeslips Settings** link on the **Options and Settings** window to bring up a box similar to Figure 3-43. This window is only applicable for Timeslips version 9.1 and newer users who have interfaced Timeslips with ProDoc. Use this window to set up phone types and name mapping.

![Figure 3-43, Timeslips Settings](image)

For detailed help with synchronizing Timeslips and ProDoc, see **Appendix C** of this manual.

This window is only applicable for **Timeslips version 9.1 and newer** users who have interfaced Timeslips with ProDoc.

The Timeslips extension gives you the ability to bill your clients by generating "slips" for each document created in ProDoc. Generating a slip takes place after document assembly in ProDoc and before the document is opened in the word processor.

**CAUTION:** Do not use ProDoc with a version of Timeslips (e.g., Timeslips Express) that does not allow you to use "project separators". "Project separators" distinguish clients and cases. Using ProDoc with a version of Timeslips that does not use "project separators" will cause the loss of important data.

Enable the **ProDoc to Timeslips Connection** the next time ProDoc is started. (Requires Timeslips) – Place a check in this box if you would like to enable the feature that allows you to synchronize Timeslips and ProDoc for client and document billing purposes.

**Synchronize at Start** – Click the **On** button to have ProDoc automatically start the synchronization of Timeslips and ProDoc data when you start ProDoc. Click the **Off** button to synchronize data only when you choose to do so.

Use this window's **Timeslips Name Mapping** tab to match the Nickname 1, Nickname 2, and Nickname 2 custom field parameters in Timeslips to match the corresponding fields in ProDoc. Select the entry types with the drop down arrows next to the fields. If you leave these fields blank, Timeslips will use Client and Case IDs for the Nickname1 field.

Use the **Timeslips Phone Type Mapping** tab to match the Timeslips and ProDoc phone type fields. Select the phone types using the drop down arrows next to the fields.

**Phone Types Settings**

Click the **Phone Types** link on the **Options and Settings** window to bring up a box similar to Figure 3-44. Timeslips users can use this tab to change the order of phone number listings to conform with the scheme in Timeslips. ProDoc allows you to store many phone numbers for a client. Timeslips limits this option to four phone numbers.
Use this window to insert, change or delete phone types for your contacts with the controls provided.

From the **ProDoc Options** Window, Timeslips users can use the convenient **Move Up** and **Move Down** buttons to adjust the order of the various phone types to properly match the ProDoc software's phone listings with those in Timeslips. Changing these settings will also determine how phone types are displayed when you add or update phone types for clients.

You can use the **New**, **Update** or **Delete** buttons to add, change or delete phone types. Any new phone types you create can be updated or deleted. **Home**, **business** and **fax** phone types cannot be deleted or updated.

**Clients & Cases Settings**

Click the **Clients & Cases** link on the **Options and Settings** window to bring up a box similar to Figure 3-45. This box allows you to specify the use of unique IDs to identify clients and cases.

**Use unique Client IDs to identify clients** – **(Mandatory for Timeslips users)** - Click this box to specify a client ID for each client. This requires that each client ID be unique (no duplicates). If you plan to use an ID for each client, you should check this box to ensure no two clients share the same ID. An example of a client ID could be 2005-ALS-2311, which would show the year the client was opened, the attorney who opened it and the actual client number. If you turn this feature on, then when adding a new client to the system, the client ID field must be left blank or a unique number must be entered.

**Use unique Case IDs to identify cases** – **(Mandatory for Timeslips users)** - Similar to the client ID above, this allows you to specify a case ID for each case. The case ID must be unique (no duplicates) for each client, although different clients can share the same case ID (two clients can have a case ID called divorce). If you plan to use an ID for each case, you should check this box to ensure no two cases for the same client share the same ID. If you turn this feature on, then when adding a new case to the system, the case ID field must be left blank or a unique number must be entered.

Leave either box blank to let ProDoc know you don't want to use client or case IDs. This will prevent the fields for these items from being displayed on client and case add/update windows.
Custom Fields Settings

Click the Custom Fields link on the Options and Settings window to bring up a box similar to Figure 3-46. This box lets you build up to six separate custom fields for Clients and Cases. Simply type in any desired Client fields, such as "SSN", in the space provided, or type in Case custom fields such as "Opposing Counsel". Then click OK.

![Figure 3-46, Custom Fields Settings](image)

Firm Information Fields Settings

(If available)

Click the Firm Information link on the Options and Settings window to bring up a box similar to Figure 3-47. This box lets you enter or edit relevant firm information (except your Firm Name, which cannot be changed here) so you can avoid entering it on each document, form or report.

The Firm Name field was completed when you registered ProDoc. If you need to change the name, go to the Main Menu and click Tools → Registration → Change Firm Name. Click here for detailed help with this menu choice.

![Figure 3-47, Firm Information Settings](image)

(If available)

The required entries are Firm Name (already completed), the first Address field, City, State, Zip Code and Phone. The other fields are optional, but you should still complete the fields that apply to your firm. Enter the information carefully; this information will appear on many of your documents.

Firm Information in Answers

The Firm Information fields are entered when you install ProDoc. The information in these fields overrides any changes made by setting default answers or changing case answers. ProDoc will always
display the current firm information as the suggested/displayed answer during assembly sessions.

This applies to all Firm Information fields, including firm name, address, city, state, zip code, phone/fax numbers, email and Web site name.

(If available)

Changing Firm Information Default Answers. To change the default answer for the Firm Name, you must click Tools → Registration → Change Firm Name. To change default answers for all other firm information fields, you must click Customize → Firm Information and make the changes on the Options And Settings window.

Miscellaneous Firm Settings

Click the Miscellaneous Firm Settings link on the Options and Settings window to bring up a box similar to Figure 3-48.

![Figure 3-48, Miscellaneous Firm Settings](image)

This window allows you to specify settings for revealing related forms during an assembly session; lead time for warnings about volume expiration; and how to handle Windows Explorer file moves.

Show logically related Forms – If this box is selected, ProDoc will note when you fail to select a form logically related to the form you’ve chosen during an assembly session or when defining a form set. The Select Forms window will appear to give you another chance to select logically related forms.

Display volume registration warning how many days before the volume expires? - Use the spin buttons here to select the lead time for getting a warning that a volume is going to expire. The warning will start appearing when a volume’s expiration date reaches the number of days that you have set in this field.

Use the selections under Drop of a file from Windows Explorer causes the file to be: to tell ProDoc how you want the source and destination file to be treated while using Windows Explorer for drag and drop operations in the Document Manager. For more information on these settings and the drag and drop function, click [here] [33].

Tools Menu

This menu choice brings up useful utility programs which perform external and housekeeping tasks.
### Tools

<table>
<thead>
<tr>
<th>Design Labels</th>
<th>Backup Data Files</th>
<th>Database Transfer</th>
<th>Registration</th>
<th>Export Data</th>
<th>Check for Updates</th>
<th>Browse WebUpdate History</th>
</tr>
</thead>
</table>

**Design Labels** brings up a pick list of available label formats.

**Backup Data Files** lets you backup or restore data files.

**Database Transfer** enables you to transfer contact data files to a system using ProDoc which doesn’t already have access to your files. You can also import contact data that was exported from another ProDoc system.

**Registration** lets you manage all licensing and registration for ProDoc, including volumes and PowerPacks.

**Export Data** lets you export contacts, cases and answers to questions. This is useful if you expand ProDoc to another computer system.

**Check for Updates** lets you check the ProDoc WebUpdate server for any updates your installation needs. Simply follow the prompts to automatically download and install the updates you need.

**Browse WebUpdate History** lets you open a window to display a history of all updates you’ve downloaded. If you want to see updates that you have not downloaded, uncheck the box labeled **Display only downloaded updates**.

### Design Labels

ProDoc has several common label definitions pre-defined for you to choose from. However, if you want to create a custom label definition, the easy to use interface is here. From the **Main Menu**, click **Tools** → **Design Labels**. A window appears, similar to Figure 3-52.
You may create, update or delete label definitions from this window. The label definitions you create control the size and type of labels you use.

Design options include label type, paper type (height and width), type of printer used, label height and width, margins, and offset dimensions.

If you click the Label Name tab, a list of all label definitions displays. If you click the Dot Matrix tab, only label definitions for dot matrix printers will display. If you click the Laser tab, only label definitions for laser printers will display.

To create a new label definition, click New. The Adding a label definition window appears. Provide the requested information. You may update a label definition by highlighting it, clicking the Update button and making the changes you desire. To delete a label definition, highlight it and click Delete.

**Backup Data Files**

Selecting this option will reveal another drop down box with two options, Backup and Restore, as shown in Figure 3-53. These are used to manually backup your data files or restore your data files from a previous backup location.

- If you select the Backup option, ProDoc makes a backup copy of client and case information files to the location you specify on the window that appears. This location can be a floppy disk, a directory on a standard hard drive or a network location.
- Similarly, in the event of system failure, file corruption or other reasons, you may elect to click Restore from the main screen menu to restore the client and case information backup file back to the ProDoc home directory. In this case, this window should reflect a Backup from location which is usually the same floppy disk or hard drive you previously backed up to.

**NOTE:** The Backup and Restore menu options are disabled while other ProDoc tasks that use the case information files are running.
Database Transfer

Selecting this option reveals two choices, **Transfer Contact Data Out** and **Transfer Contact Data In**, as shown in Figure 3-54. When you choose either option, a window appears where you select the drive and directory for each transfer in the backup files dialog window. You can transfer data out to, or in from, any file location or drive available to your computer.

After you make this selection, you can select one or more contacts whose data you wish to transfer.

Registration Menu

(If available) Figure 3-55 displays the Registration menu selection and sub-menus which let you manage all licensing and registration for ProDoc, including volumes and PowerPacks. **After ProDoc is registered**, **Register ProDoc** is replaced by **Change Registration** and **Change Firm Name** choices as shown on the right side of Figure 3-55.

Register ProDoc

Normally you will only need to register the computer one time when you initially install the software. Subsequent periodic updates will automatically extend the period of your registration. Click here to jump back to Chapter 1 and read the section on registration.

Change Registration

You can use this option if you need to change your ProDoc license information or need to enter a new registration code. Click **Tools → Registration → Change Registration**. The **Change Registration Code** window appears. Before you change any information, please call us at 1-800-759-5418. Our Technical Support representative will help you complete the window and take any other necessary steps to change your registration.
If there is ever a problem with your registration code, this selection allows you to change your registration code or enter a new registration code, then go through the registration process again.

**Change Firm Name**

*(If available)*

To change your firm name, click Tools → Registration → Change Firm Name. This selection allows you to change your firm name and your account and contact information. There are two selections on this submenu, Change by Internet and Change by Phone. If you have an Internet connection, it’s best to use the Change by Internet selection.

- Selecting Change by Internet brings up an internet log in screen. You will need your customer number (located on your invoice, shipping advice or billing statement) and your web password, which was provided to you after you registered. Simply log in and update your information.
- Selecting Change by Phone brings up a window listing details about your computer and ProDoc installation and your Firm Name. You can edit your firm name in the New Firm Name field. You will then need to call us at 1-800-759-5418 to obtain and enter the Thomson Reuters Supplied Confirmation Code. Enter it and click the Change Firm Name button to make the firm name change. The technician you speak with will help you complete any other necessary actions.
- If you decide not to make any changes, click the Return to ProDoc button.

**Uninstalling Volumes**

The Uninstall Volume menu selection allows you to uninstall volumes that you no longer use. Before uninstalling a volume, please read the information that follows.

**More Information on Volume Registration.** ProDoc volumes are updated regularly to provide our customers with forms that reflect the most current laws. It is important to update ProDoc and delete your superseded volumes so you are using forms that represent the current state of the law.

ProDoc provides an expiration date for each of its volumes. It is the expiration date that helps keep attorneys and their staff up-to-date with the most current laws and forms. If you try to access ProDoc after a volume's expiration date, a window entitled Inaccessible Volumes appears, similar to Figure 3-56, warning that the volume's registration has expired and the volumes listed are no longer accessible.

In the Inaccessible Volumes window, the Volume Title and Explanation are displayed. Additional Information is provided underneath the display window. Click Help to view help for the Inaccessible Volumes window. If you want to see specific information about each volumes' authors, changes, variances
and forms, click **Volume Help**. Click **Uninstall Volume** to uninstall a volume. ProDoc will display the **Volume Uninstall** message box. The message provides you with two options; **Hide Volume Only – No files are deleted** and **Permanently Delete Files and Hide Volume**. These options are discussed in detail below.

**Hide Volumes Only – No files are deleted**

If you choose Hide Volumes Only – No files are deleted, the volume that you choose to hide will no longer show up on the list of volumes from which you can choose. The volume will remain on your hard drive. This allows you to move any modified master forms or supplemental forms you may have created into the new volume before deleting the prior version of the volume. If you want to continue using a volume that you have hidden, call Thomson Reuters Customer Support at 800-759-5418.

**Permanently Delete Files and Hide Volumes**

If you choose Permanently Delete Files and Hide Volumes, the files will be deleted from the ProDoc directory on your hard drive and the volume will be removed from the list of volumes. If you decide later that you want to use the expired volume, call Thomson Reuters Customer Support at 800-759-5418.

**Solutions for Expired Volumes:**

- Usually the only action you need to take is to install the latest available **WebUpdate**. If this is the case, on the main menu, click **Tools → Check for Updates** and install all new updates. The message will discontinue.
- If you have already installed all available updates, you should call Thomson Reuters Customer Support at 800-759-5418.
- If you do not install the update and the volume expires, you will need to call Customer Support and have a new registration issued for the expired volumes.
- Install the latest CD using the registration code licensed for your volumes. If you cannot locate the CD, call Thomson Reuters Customer Support at 800-759-5418.

**Ended your subscription.** If you no longer subscribe to a volume, you will not be able to access the volume and you will not receive the updated volume for that area of law.

**Solutions:**

- Call Sales at 800-759-5418 and add the expired volume to your subscription.
- Delete the unregistered volume(s).

**Supplemental Forms Use.** If you created supplemental forms in the expired volume, they will become inaccessible once the volume they were created in becomes unregistered or is deleted. You may subscribe to the volume and renew the volume's registration or move the supplemental forms into the new volume.

**Solution:** Call Customer Support at 800-759-5418 and request assistance with renewing your volume's registration or moving your supplemental forms into the new volume.

**Why keep a superseded volume?**

We are constantly updating our volumes to provide you with the most current styles and laws. Usually, the new updates affect only a portion of a particular volume. However, when substantial changes have been made in an area of law, we create a new volume to replace the outdated volume. When an outdated volume is replaced, it is superseded. If you have current cases that were created in the superseded volume, you will want to keep the superseded volume active until you have completed those cases. You should keep a superseded volume active while ongoing cases are active. This prevents the need to input the answers to questions that you have already answered once. Use the new volume for any cases you receive after installing the new volume. Once you have completed the cases that used the superseded volume, you may delete the superseded volume. You may use the new volume for your older cases, but you will have to answer all of the questions again.
You may also want to keep a superseded volume in which there are modified master forms or supplemental forms. Keeping the volume will provide you the means to move the modified master forms and supplemental forms into the new volume.

**Solution:** Call Thomson Reuters Customer Support at 800-759-5418 and request a Vlicense to extend the expiration date for the superseded volume (a Vlicense is Thomson Reuters' license for each volume).

**Edit Volumes List**

This menu selection is used to add a volume or change the way a volume appears on the volume selection window. It also tells ProDoc where the volume is located. The required information includes the following:

**Title** - Title of the volume as you want it displayed on the selection window, for example, Family Law.

**Subdirectory** - Name of the directory where the volume is installed. Do not enter the full path for the directory, since ProDoc assumes the subdirectory entered here is a subdirectory directly beneath the ProDoc home directory. For example, if ProDoc is installed in the directory C:\PRODOC and if you enter FAM as the subdirectory here, ProDoc will look for the volume in C:\PRODOC\FAM. If you are adding a volume, ProDoc will create the directory as described above.

When you select the **Edit Volume List** utility, the Volume Browse window will appear. It displays the volumes list and has **New**, **Change** and **Delete** buttons. To add a volume to the list, select **New**. The Volume Information window will appear, similar to Figure 3-57.

![Volume Information Window](image)

Figure 3-57, Volume Information Window

The same window will appear if you select **Change** to change the title or subdirectory of the highlighted volume. The window contains two entry fields:

**Title** — Title of the volume as you wish it to appear in browse and selection windows, e.g. “Family Law.”

**Subdirectory** — Subdirectory where volume files are stored. This must be a subdirectory under the main ProDoc directory (normally C:\PRODOC). If you enter an incorrect subdirectory, ProDoc will not be able to find the volume files and you will not be able to access the volume until this subdirectory is changed to the subdirectory where the volume files are stored.

To delete a volume from the volumes list, highlight the volume desired and click the **Delete** button. You will be prompted to confirm the deletion, and the volume will be removed from the list. You will no longer be able to access the deleted volume even though deleting the volume from the volumes list doesn't delete any volume files. **WARNING** – if you delete a ProDoc volume from the list and later want to add it back, you should install the volume rather than merely adding it back to the volumes list.
Show Installed Volumes

Selecting Show Installed Volumes displays a browse list of all of the volumes you have installed. You may need to refer to this list while getting help from technical support. You can click the Info button to see a listing of the current changes from the last update, any variances, the authors of the forms, and a list of forms for each volume.

Register the PowerPacks

This menu option will only be available to those customers who subscribe to the PowerPacks—Additional Timesavers.

If your PowerPack registration expires while your subscription is current, you should call Technical Support at (800) 759-5418. The technician that you speak with will take you through a number of steps that must be completed before you can re-register the PowerPack.

To register a PowerPack:

1. Call Thomson Reuters Technical Support at (800) 759-5418.
2. On the ProDoc toolbar click Tools → Registration → Register the PowerPacks.
3. The Registration Information for PowerPack window appears.
4. Give the support technician the Validation seed that appears in the upper left side of the Registration Information for PowerPack window.
5. Make sure that Today's date is correct.
6. The technician will tell you the Registration type, Expiration date, Validation Code and which PowerPack(s) to choose. To choose a PowerPack:
   a. In the PowerPack section of the Registration information for PowerPack window highlight the PowerPack you are registering by clicking on it. If only one PowerPack is displayed in the PowerPack section it is always highlighted.
   b. Click to the left of the highlighted PowerPack and a green check mark appears. You may also click the Select button to place a green check mark next to the highlighted PowerPack.
   c. If you need to register all listed PowerPacks, click the Select All button to select all the PowerPacks in the list. Click the Clear All button to clear all selections.
7. Click OK. This button is disabled if no Power Packs are selected.

To permanently un-register one or more installed Power Packs, select the desired Power Packs and click the Permanently Unregister PowerPack button. This button is disabled if no Power Packs are selected. Click Yes when the Unregister the PowerPack window appears and the selected PowerPack(s) will be permanently unregistered.

To take no action, click the Cancel button to close the window.

Check for Updates

To run WebUpdate, click Tools → Check for Updates. The program will check Thomson Reuters' online server for updates needed for your installation. If updates are available, the Updates for ProDoc are now available window appears. You have three choices on this window:

- Click Download and Apply All Updates to download all updates. The updates will be downloaded, and a window will be displayed which tells you the updates have been downloaded. You will be prompted to restart ProDoc to install the updates. After ProDoc restarts, the downloaded updates will be installed.
- Click Select Updates to Download and Apply to open a window displaying available updates and a description of each update available. The selection box for each update will be checked. We recommend you download each available update. If you want to exclude an update from download,
click the update's check box to clear it, and the update will not be downloaded. Click **Begin Download** to download the selected updates. If you don't want to download updates at this time, click **Cancel**.

- Click **Do Not Download Updates at this Time** to close the update window without downloading any updates.

**ProDoc WebUpdate Window**

This window displays available updates and a description of each update available. The selection box for each update will be checked. We recommend you download each available update. If you want to exclude an update from download, click the update's check box to clear it, and the update will not be downloaded. Click **Begin Download** to download the selected updates. If you don't want to download updates at this time, click **Cancel**.

**Browse WebUpdate History**

To check your update history, Click **Tools → Browse WebUpdate History**. The **Browse WebUpdate History** window will appear. This window displays a history of all updates you've downloaded. If you want to see updates that you have not downloaded, uncheck the box labeled **Display only downloaded updates**. Click **Close** to close the window.

**Cancel ProDoc Subscription**

This menu choice provides you the means to notify us that you wish to cancel your subscription. The window that appears provides us with the information needed to complete your request. It also provides fields where you can tell us your reasons for cancelling and any suggestions you may have for us. We value your feedback, and this information will help us improve the services we provide. When completed, this window generates an email which is sent to us so we can process your request.

Figure 3-58, Export Menu Choices

The Export Data menu choices are shown in Figure 3-58.

You can use this menu selection to export contact information, case information, and answers.

The data is exported to a comma-delimited ASCII file.

To export data from the three categories, you first select the appropriate contacts or cases, then you must select the fields you wish to export. Selecting **Export Contacts** brings up the **Select Contacts** window, while selecting **Export Cases** and **Export Answers** brings up the **Select Cases** window. Figures 3-59 and 3-60 depict these windows. The basic process for selecting the contact or case is the same for exporting contacts or exporting cases.
When selecting contacts for export, you can display your list by Name or by ID. If desired, you can click the Clients Only box to only display clients.

Use the buttons at the bottom of the window to select or unselect individual contacts and view only those you’ve selected.

Use the buttons on the right side of the window to quickly change your selections, flip one or all selections, search the database for a particular contact, move the highlight to the previous or next one selected, or perform a query to find those who match selected search criteria.

When selecting cases or case answers for export, you can display your list by Case Description or by Case ID.

The selections buttons and controls on this window operate in the same manner as those on the Select Clients window.

After you select the clients or cases as appropriate and click the OK button, the Choose Field for Export window appears, similar to Figure 3-61.
A list of controls for this window follows:

- **Add** - Highlighting any of the fields that are displayed on the left side of the Choose Fields for Export box and clicking **Add** will place the highlighted field in the Export Fields display on the right side of the box.
- **Remove** - Highlighting any of the fields that are displayed on the right side of the Choose Fields for Export box and clicking **Remove** will remove the highlighted field in the Export Fields display.
- **Shift Up** - Moves the highlighted field up in the list of fields to export.
- **Shift Down** - Moves the highlighted field down in the list of fields to export.
- **Picture** - Allows you to set the format in which your numbers are exported. Example: @n6.2 means that the numbers that you export will be exported as six numbers, a decimal point and two numbers following the decimal point.

When you are finished choosing fields, click the **OK** button. A browse/save directory window will appear, where you will enter the file name and locate the folder in which to save the file.

**Window Menu**

The **Window** menu, depicted in Figure 3-62, shows you what windows you currently have opened and allows you to display the windows in different ways on the screen. You can also use the numbered list of open windows to choose which one to work with.

**Help Menu**

The **Help** Menu displays options for getting help. The menu is depicted in Figure 3-63.
Context Sensitive allows you to get help on the particular task you're working on.

Contents displays the Help library.

Search for Help on... allows you to use search for and find help topics.

How to use Help explains the help system used in ProDoc.

About ProDoc lists version, license and subscription information.

About the Volumes lets you access the list of the latest updates installed. This information includes a description of the current changes from the last update, any variances, the authors of the forms, and a list of forms for each volume.

Visit ProDoc Website opens the ProDoc Web site in a browser window.

Send an Email to ProDoc opens an Outlook message addressed to ProDoc. This message will automatically contain version, installation and firm information. This information will help Thomson Reuters' Customer Service technicians handle your issue efficiently.
Introduction to the Texas Family Law PowerPack

What are PowerPacks?

PowerPacks are collections of powerful tools that allow fast and efficient entry of information for document assembly and information management. Using PowerPack programs significantly reduces the amount of time it takes to assemble documents. The Texas Family Law PowerPack is currently available for subscription in Texas. It contains the following programs:

**Child Support Calculator Program**. This program package helps you easily and quickly calculate child support obligations and delinquent balances according to the guidelines in the Texas Family Code. The program consists of four applications: the Child Support calculator, Delinquent Support Calculator, Payment Splitter (semi-monthly, bi-weekly, weekly) and the Obligation Amortizer.

- **Child Support Calculator** - Calculates child support obligations and delinquent balances.
- **Delinquent Support Calculator** - Calculates delinquent amounts based on child support, previously entered judgments and the payments that have been made.
- **Payment Splitter** - Helps you determine the correct amounts for support payments for semi-monthly, biweekly and weekly periods based upon a judgment for a monthly amount.
- **Obligation Amortizer** - Helps you easily calculate how long it will take to pay off an obligation, and lets you print an amortization schedule.

**Child Possession Calendar** - Prints a monthly calendar showing the child visitation schedule.

**Divorce Inventory** - Inventories and assigns property. Gives you the ability to work with multiple scenarios for dividing property.

**UCCJEA Affidavit** - The Uniform Child Custody Jurisdiction and Enforcement Act Affidavit program is designed to assist you with entering the current address or whereabouts of each child, as well as the five year residential history of each child. As a part of the affidavit, you can enter additional information regarding ancillary matters which affect the children. Finally, you can also list all third parties claiming visitation and/or custody rights to the children.

How Can I Locate the PowerPacks?

On the ProDoc menu bar, click PowerPacks. If you subscribe to the Texas Family Law Volume and PowerPack, the menu will list Family Law. Click Family Law to reveal the programs listed above.

How Do I Get the PowerPack If I Don’t Already Subscribe?

If your subscription does not currently include the Texas Family Law PowerPack, call ProDoc Sales at 800-759-5418 to add it to your subscription. Get the power today!

How Do I Use PowerPack Tools?

If you would like further instructions on using PowerPack programs, consult this manual, click the Help buttons that appear in the PowerPack program you are using or call Technical Support at 800-759-5418.

Support included at no extra charge includes:

- Help buttons on each window (or press the F1 key).
- Computer Based Training (CBT) Modules at the ProDoc Web site.
- Periodic ProDoc user seminars; schedule these through the ProDoc Web site.
- Call our Technical Support specialists at 1-800-759-5418.
- Send email to tech@prodoc.com.
Selecting a Case for PowerPack Use

This section discusses selecting an existing client and case. If you need to create a new client and case, click the New Client button to create the client. After creating the client, highlight the new client's name and click the New Case button to create a new case for the client. For help, click the Help buttons on the windows used or click here to see the section on adding new clients.

Use the Select a Case window to choose a client and case file in which to save the information you input into your PowerPack program. It lists existing ProDoc clients and all cases for the clients. You can also use it to see and modify related client/case data and create new clients and cases.

You can select a case to use by either of the methods listed below:

- Double-click a displayed case.
- Click a displayed case, then press the Enter key or click the Select Case button.

To find a case that's not displayed:

- Type the first letter(s) of a client's name to jump to that client's entry on the tree. To do this more than once, use the backspace key to clear your previous letter entries.
- Use the scroll bar on the right of the form to quickly scroll through the list. You can also click on any entry on the left and scroll with keyboard page up, page down, and up/down arrow keys.
- Use the Now Showing: drop down arrow to choose the types of contacts or clients to display. Cases are grouped under clients, who are grouped in alphabetical order. Categories will be displayed with type icons of different colors on the window. The default is Active Clients. Other choices are All Contacts, Closed Contacts, Private Clients and Non-Clients.
- Use the Hide/Show Cases toggle button to display or hide cases. Likewise, you can click the + or - symbols in the client tree to reveal or hide cases.

For Florida and Texas PowerPack Users Only

Some PowerPack programs may be used without selecting a case. When you run these programs, the Select a Case window will display a Do not use case check box just above the New Client button. If you check this box, the Select Case button title changes to OK. Click OK to open the program with no case selected.
Select a Case Window With a Do Not Use Case Option

If you check the **Do not use case** box, no client information will be saved, and the following popup message appears:

**No Case Selected Notice**

Select **Yes** to select a case for the client, or lose your information by selecting **No**.
Child Support Calculator

Overview

The Child Support Calculator program is designed to be a very simple tool for quickly calculating child support obligations and delinquent balances. These calculations are made according to the guidelines in the Texas Family Code.

The Child Support Calculator consists of four applications: the Child Support Calculator, Delinquent Support Calculator, Payment Splitter (Semi-monthly, Bi-weekly, Weekly) and the Obligation Amortizer.

Descriptions of each Child Support Calculator application follow:

- The Child Support Calculator calculates how much monthly, semi-monthly, weekly or bi-weekly support a person should pay based on his/her monthly income, number of children, etc. This function is handy when you are completing an original divorce decree or a modification order in which the obligor is ordered to pay child support.

- The Delinquent Support Calculator calculates the remaining balance of unpaid delinquent obligations and interest when an obligor has failed to make timely child support payments. This function is handy when you are filing an action to collect delinquent child support.

- The Payment Splitter (Semi-monthly, Bi-weekly, Weekly) calculates the amount of each child support payment to be paid when the total monthly child support is known. This function is useful when the monthly child support ordered varies from the amount calculated with the Child Support Calculator.

- The Obligation Amortizer calculates when child support arrears will be paid off. This calculation is based on how much is to be paid each month. This function is helpful when determining how long the obligor will have to make payments towards arrears.

Getting Help

- Click the Help buttons on each window (or press the F1 key).
- View Computer Based Training (CBT) Modules at the ProDoc Website.
- Periodic ProDoc user seminars; schedule these at the ProDoc Website.
- Call our Technical Support specialists at 1-800-759-5418.
- Send email to tech@prodoc.com.

Helpful Hints

- You can select a tab or button by pressing the underscored letter and the ALT key at the same time.
- When you enter a date, you do not need to enter the slashes ("/"). For example, if you enter "020195" and then press the Tab key, the date will be automatically formatted to "02/01/95".
- When you enter a dollar amount, you do not need to enter the ending ".00". For example, if you enter "250" and press the Tab key, the amount is automatically reformatted to "250.00".
- In case a judge asks you, the Child Support Calculator applies payments in the order specified in Sec. 157.268 of the Texas Family Code. Payments are applied in the following order: current obligations; interest on unconfirmed obligations; principal of unconfirmed obligations; interest on confirmed obligations; principal of confirmed obligations; and then attorney’s fees and costs, including interest.
Child Support Calculator

To open the Child Support Calculator:

2. The Select a Case window appears. To find the client you want to use:
   a. Type the first few letters of the client's last name. As you type, the highlight will move to the next match on the client list. To start over, press the Backspace key on your keyboard.
   b. You can also use the scroll bar at the right side of the window to scroll through the alphabetical list.

3. When the selected client is highlighted, you can double-click the name, press the right arrow key on your keyboard, or click the Show Cases button to view the client's cases.

4. Select a case by double-clicking a case title. You can also click the title once, then press the Enter key or click the Select Case button.

5. The program opens to the General form.

Important things to know about the Child Support Calculator’s applications include:

1. Calculations take into account the current support guidelines in the Family Code and the Texas Attorney General's tax chart. The Code provides for adjustments for health insurance for the children, union dues, children in multiple households, and benefits received by the children due to the obligor's disabilities or old age. Filling in the appropriate blanks on the window makes the adjustments.

2. Under the Adjustments tab of the Child Support Calculator, you may enter an additional amount to be deducted from the obligor's net resources as well as a description of the deduction.

3. The Attorney General issues new tax charts annually. This is one reason that updates are important. Please install your ProDoc updates when you receive them in order to keep all of your information current.

4. The maximum amount of monthly income that can be entered on this screen is the largest monthly income referenced on the Attorney General's tax charts.

5. The amount of the obligation is not calculated until you enter values for the obligor's total children, number of children before the court and average gross monthly income.
Completing the Forms

There are two tabs on this window which help you access the two major forms, General (discussed below) and Adjustments. A toolbar is located at the bottom of both forms.

The fields on the General form are described below:

**Obligor** – Enter the obligor’s name.

**Describe Obligor** – Click the appropriate button to describe the obligor.

**Obligee** – Enter the obligee’s name.

**Obligor’s total children** – Enter the number of children that the obligor has an obligation to support. This includes all children included in the current action as well as children from a prior marriage. The minimum value for this field is 1.

**Number of children before the court** – This is the number of children from the current marriage. If the obligor does not have any children outside of this marriage, then this number will be the same as the entry in **Obligor's total children**. The minimum value for this field is 1.

**Monthly health insurance for children** – Enter the amount the obligor spends monthly, if any, for health insurance for his children. Section 154.062(d)(5) provides that expenses for health insurance for the obligor’s child be deducted in calculating the obligor’s net resources for child support.

**Monthly union dues** – Enter the amount the obligor spends monthly, if any, for union dues. Section 154.062(d)(4) provides that the obligor’s union dues are to be deducted when calculating the obligor’s net resources for child support.
State inc. tax – Enter any amount the obligor is required to pay monthly for state income tax.

Obligor's average (taxable) gross monthly income – Section 154.061 states that whenever feasible, gross income should first be computed on an annual basis and then should be recalculated to determine average monthly gross income. The amount specified here will be applied to the percentages in the Attorney General's Tax Chart to determine the after tax income.

Obligor is self-employed – As required by Section 154.061 of the Family Code, the Texas Attorney General has promulgated tax charts for calculating the obligor's net resources. There are different charts depending on whether or not the obligor is self-employed. If the obligor in this case is self-employed, click on the check box and a check will appear in it.

Additional nontaxable monthly income – In some situations, the obligor may have income that is not taxable (e.g., military allowances) and you may not want to use the tax charts to adjust this income. An example here could be the various military allowances, which are not taxable. Any amount you enter here will be added to the after tax income described above to get the net income for the obligor.

Amount of monthly benefits received by children because of obligor's disability – Section 154.132 states that if the children are receiving benefits due to the obligor's disability, the amount of benefits received by the children is to be deducted from the child support obligation.

Amount of monthly benefits received by children because of obligor's social security old age benefits – Section 154.133 states that if the children are receiving benefits due to the obligor's old age, the amount of benefits received by the children is to be deducted from the child support obligation.

Adjustments Form

A description of the two fields on the Adjustments form follows:

Amount – Enter the amount of the adjustment that you want the court to take into consideration when determining child support obligations. This amount is subject to the judge's scrutiny before it is deducted from the party's net resources.

Description – Provide a description for the amount that you want adjusted.

Using the Toolbar

Toolbar buttons and functions are described below:

Help – Click this button to locate help on using the Child Support Calculator.

Print – Click this button to print the Child Support Obligation report. It provides information such as the obligor's gross income, adjustments to gross income and net resources, number of children and amount of child support obligation. It also contains an information sheet which explains how the child support calculations are made.

Save and Continue – Click this button to save your work and continue using the Child Support Calculator.

Save and Close – Click this button to save and close the Child Support Calculator.

Cancel – Click Cancel to exit the program without saving your work.
Delinquent Support Calculator

To open the Delinquent Support Calculator:

1. On ProDoc's main menu, click **Power Packs → Family Law → Delinquent Support Calculator**.

2. The **Select a Case** window appears. To find the client you want to use:
   a. Type the first few letters of the client's last name. As you type, the highlight will move to the next match on the client list. To start over, press the Backspace key on your keyboard.
   b. You can also use the scroll bar at the right side of the window to scroll through the alphabetical list.

3. When the selected client is highlighted, you can double-click the name, press the right arrow key on your keyboard, or click the Show Cases button to view the client's cases.

4. Select a case by double-clicking a case title. You can also click the title once, then press the Enter key or click the Select Case button.

5. The program opens to the **Names** form.

**Toolbar Buttons**

The toolbar buttons appear at the bottom of each form and are described below:

- **Help** – Displays the help window.

- **Print** – Click to reveal a menu listing the two reports you can print: either a Full Report or a Summary.
  
  - **Full Report** – Sends a complete report to your printer that includes a list of all obligations and payments entered for the case. It also includes a listing showing how each payment was applied to confirmed (reduced to judgment) and unconfirmed obligations as well as interest.
  
  - **Summary** – Sends a basic report to your printer that describes how much is owed for both support obligations and interest.
Clipboard – Clicking the Clipboard button sends a list of all obligations due, payments made and remaining balances to your Windows clipboard. This list can then be pasted into a document (such as a Motion for Enforcement of Child Support Order). After you click on this option, the calculations will be made and a window will pop up telling you how to paste the information into your document.

Save and Continue – Clicking this button saves all names, obligations and payments you have entered or changed on this form and then returns you to the main window.

Save and Close – Clicking this button saves your work and closes the Delinquency Report Calculator.

Cancel – Clicking Cancel aborts any changes or additions you have made and returns you to the main window.

Entering Obligations

An "obligation" in this context means a child support payment that is supposed to be paid. To enter the obligations for a case, click the Obligations tab and then click on the New button or the Add Multiple Obligations button.

The New button takes you to a window where you enter obligations one at a time. The Repeat button lets you repeatedly enter a series of obligations without jumping back and forth between this window and the previous one. When you enter the last obligation, click the OK button to accept the last obligation and return to the previous window. Click Update to update the highlighted obligation that was entered using the New button. Click Delete to remove an obligation that was entered using the New button.

The Add Multiple Obligations button takes you to a window where you can quickly enter a whole series of obligations. For example, you could specify semi-monthly obligations of $250.00, beginning on 01/01/92 and ending on 05/30/95 with payments due on the 1st and 15th day of each month. The Delinquent Support Calculator will automatically post the obligations so you don't have to enter each one individually.

The Change Multiple Obligations button lets you change a range of obligations which were previously entered. The Change a Range of Obligations window which appears lets you select the range you use to change as well as the amount and frequency of obligations.

To close the Obligations window without adding an obligation, click Cancel or press the ESC key.
Entering Payments

To enter the payments made by the obligor in a case, click the Payments tab and then click the New or Add Multiple Payments button.

The New button takes you to a window where you enter payments one at a time. The Repeat button lets you repeatedly enter a series of payments without jumping back and forth between this window and the previous one. When you enter the last payment, click the OK button to accept the last payment and return to the previous window. Click Update to update the highlighted payment that was entered using the New button. Click Delete to remove a payment that was entered using the New button.

The Add Multiple Payments button takes you to a window where you can quickly enter a series of payments. For example, you could specify semi-monthly payments of $250.00, beginning on 01/01/92 and ending on 05/30/95, with payments made on the 1st and 15th day of each month. The Delinquent Support Calculator will automatically post the payments so you don’t have to enter each one individually.

Like the obligations window, the payments window has a Repeat button. This button lets you repeatedly enter a series of payments without jumping back and forth between this window and the previous one. When you enter the last payment, click the OK button to accept the last payment and return to the previous window.
Entering Judgments

The **Judgment** form allows you to account for confirmed arrears, enter the amount of the judgment, the date on which it was entered, and the interest rate. (Do not enter the amount of monthly payment ordered to pay off the arrears in the **Obligations** tab.) You may also enter a previous judgment for attorney’s fees and costs, as well as the interest rate on that judgment.

**Information about Judgments**

In the Texas Family Code, delinquent child support obligations that have been reduced to a judgment are called "confirmed obligations." The Code now provides for simple interest on those judgments at 6% per year. Older judgments, however, might provide for a different type or rate of interest. Recent judgments for attorney’s fees and costs are subject to compound interest based on the Texas Finance Code. On the **Judgment** form, you can enter the amount of the judgment, as well as the interest type and rate to be applied.
Entering Debits

The **Debit** form is used to account for instances when the obligor has received a refund. For example, if the Attorney General's office withheld too much from the obligor's IRS refund and sent the obligor a check, the amount of the check would be entered in this window.

**Printing Delinquent Support Reports**

There are two reports you can print for delinquent child support calculations:

- The **Summary** report prints a single page that shows the total of all obligations and payments, as well as the remaining balance of principal and interest due.
- The **Full** report prints the summary page plus a listing of all payments and obligations entered for a case. It also prepares an audit report that shows how much of each payment was applied to the various obligations and interest due on those obligations.

**Calendar Buttons and Tool**

![Calendar Tool](Image)
The program provides calendar buttons in selected date input fields which make it easier to input dates. To select dates:

1. Click the calendar button 🗓. The calendar appears.
2. Click 📅 to view today's date.
3. ⏳ and ⏳ - Click to move back or forward one year.
4. ⏳ and ⏳ - Click to move back or forward one month.
5. ⏳ and ⏳ - Click to move back or forward one week.
6. Use Up and Down arrow keyboard keys to move back and forward one week.
7. Use Left and Right arrow keyboard keys to move back and forward one day.
8. Once you locate the date you want to enter, press the Enter keyboard key or click the date.
9. The calendar closes and the date you clicked on should appear in the date field you had highlighted or in the next available field if you have not highlighted a date field.
10. Click Close to close the calendar without selecting a date.

**Payment Splitter**

To calculate payments other than monthly when the child support ordered varies from that amount determined by the Child Support Calculator:

2. Enter the amount of the monthly child support obligation and click Calculate.
Obligation Amortizer

You can open the Obligation Amortizer by clicking Power Packs → Family Law → Obligation Amortizer.

This tool is used to calculate how long it will take to pay off an obligation. The default interest rate is 6% simple interest as provided in the Texas Family Code, which you can change if desired. Fill in the blanks and click Calculate. To print the Amortization Schedule, click Print.

The fill-in-the-blank fields are:

- **Calculate interest from (mm/dd/yyyy)** – This is the starting date for which you want to start calculating interest to apply towards the obligation.
- **Total obligation** – Enter the amount of the total obligation due.
- **Amount of each payment** – Enter the payment amount that will be paid by each payment date.
- **Interest rate** – Click on the spin button to choose the interest rate that should be used.
- **Payment options** – Select whether the payments will be made Monthly, Semi-monthly, Weekly or Bi-weekly.
- **Day of month first payment is due** – If payments are due on the first day of each month, then enter 1. If payments are due on the 5th and 20th, then enter 5 here. If you want to have the payments made on the last day of the month, place a check in the box entitled Last day of the month.
- **Day of month second payment is due** – This field is disabled if you did not select Semi-monthly for the payment option. If you want to have the payments made on the last day of the month, place a check in the box entitled Last day of the month.
- **Day of week payments are due** – This field is disabled unless you selected either Weekly or Bi-weekly as the payment option. You can click the down arrow and a list of the days will be displayed; select the day you want to use.

The total number of payments, date of last payment and amount of the last payment all appear on the bottom of the window.
Installing the Child Support Calculator on a Pocket PC

System Requirements
- 32 MB RAM or more
- Microsoft® Windows Mobile® ActiveSync® 3.7 or higher
- Microsoft® Windows Mobile® Edition (any version)
- An active subscription to the Texas Family Law PowerPack

Installation Instructions. Most users should install the Child Support Calculator directly to the main memory of the Pocket PC. However, advanced users may install the Child Support Calculator to a location other than the main memory of the Pocket PC.

To install the Child Support Calculator on your Windows Mobile Pocket PC:

1. Insert the Pocket PC into the cradle. The cradle must already be attached to the computer.
2. Open Windows Explorer and browse to C:\ProDoc (or the path where you installed ProDoc).
   a. In that folder, open the ProCalcPPC folder.
   b. Locate the Install PPC Procalc.exe file and double-click it.
3. The Add/Remove Programs box appears and retrieves application data from your Pocket PC.
4. After the application data has been retrieved, the Installing Applications box appears.
   a. Click Yes if you want to install the Child Support Calculator directly to the main memory of the Pocket PC.
   b. Click No if you want to install the Child Support Calculator to memory other than the main memory of the Pocket PC.
      i. Click the drop-down arrow to the right of the Save in field and select the memory on which you want to install the Child Support Calculator.
      ii. Click OK.
   c. If your Pocket PC already has the Child Support Calculator installed on it, the Applications Already Installed box appears.
      i. Click Yes to proceed with the re-install or upgrade.
      ii. Click No to exit the installation program.
5. The Installing Applications box appears with a progress bar that shows the progress of the installation.
6. After the installation is complete, the Application Downloading Complete box appears.
7. Click OK. The Child Support Calculator is now installed on your Pocket PC and is ready for use.
8. To open the Child Support Calculator on your Pocket PC, click Start → Programs → ProCalc.

Installing the Child Support Calculator on a Palm or Handspring Device

Using a Cradle to Transfer the Child Support Calculator

1. Start the Palm® (or Handspring®) Desktop application on your computer.
2. Insert the PDA into the cradle. The cradle must already be attached to the computer.
3. Click Quick Install from the left side of the PDA's desktop application window.
4. The PDA user's name should appear in the window titled **palmOne Quick Install**.
   a. If the PDA user's name does not appear, choose it from the drop-down list.
   b. If the PDA user's name does not appear on the drop-down list, you may add a new user to the list by following these instructions (based on using Palm® Desktop software).
      i. In the Palm® Desktop software, click **Tools → Users → New**.
      ii. Type in the user's name and click **OK**.

5. Click **Add**.

6. Go to C:\ProDoc (or the path where you installed ProDoc).

7. Select the 2 files in that folder.
   a. **NSBRuntime.prc**
   b. **ProCalc.prc**

8. Click **Open**.

9. If the two files are listed in the box titled **Handheld**, close the **palmOne Quick Install** window.

10. A message will appear stating that the files will be installed to your palm device the next time a HotSync operation is performed. Click **OK**.

11. You may now close the PDA desktop application.

12. Click the HotSync button that is located on the cradle when you are ready to sync your PDA.

13. At this point, you should see the PDA sync with the computer, and messages should appear on the PDA and the computer to let you know the synchronization is taking place.

14. When the synchronization is done, remove the palm device from the cradle.

15. Click the **Home** icon.

16. To start the **Child Support Calculator**, click the **ProCalc** icon that is now on your PDA's main screen.

**Using the Infrared Beam to Transfer the Child Support Calculator**

1. Start your PDA and the PDA from which you will be transferring the **Child Support Calculator**.

2. Line up the infrared ports (located on the top of Palms, and side of Handsprings).

3. Click the upper left portion of your PDA's screen and choose **App**.

4. From the **App Menu**, click **Beam**.

5. From the list of programs, click **ProCalc → Beam** (the PDAs must be close together).

6. Accept **ProCalc** from the sender's device.

7. Repeat steps 3 through 6, but this time choose **NSBRuntime** instead of **ProCalc**.

8. If you are asked whether you want to overwrite **NSBRuntime**, click **Yes**.

9. Click **Done**.

10. Click the **ProCalc** icon that is now on your PDA's main screen to start the **Child Support Calculator**.
Child Possession Calendar

Using the Program

The Child Possession Calendar program allows you to:

- Enter information related to conservators and children;
- Determine custody dates and times for each party;
- Create a calendar that clearly displays the custody dates and times, birthdays of the children involved and holidays; and
- View or print calendars by month.

Starting the Program

2. The Select a Case window appears. To find the client you want to use:
   a. Type the first few letters of the client's last name. As you type, the highlight will move to the next match on the client list. To start over, press the Backspace key on your keyboard.
   b. You can also use the scroll bar at the right side of the window to scroll through the alphabetical list.
3. When the selected client is highlighted, you can double-click the name, press the right arrow key on your keyboard, or click the Show Cases button to view the client's cases.
4. Select a case by double-clicking a case title. You can also click the title once, then press the Enter key or click the Select Case button.
5. The program opens to the Client Information form.

Navigating the Child Possession Calendar Program

There are four tabs across the top of the main program window: Client Information, Dates, Times and Calendar. Each tab represents a different form. To move from one screen to another, position the cursor over the tab you want to use and click it.

You can also use hot keys. Wherever a window, screen or field title shows an underlined character, i.e., "Primary Attorney", you can navigate to that entry by holding the "Alt" key and pressing the underlined keyboard character. In the earlier example, pressing Alt + A on your keyboard puts your cursor in the Primary Attorney field.
Client Information Form

![Client Information Form](image)

Figure 1. Client Information Form

The Client Information form is used to gather information about the parties involved in the matter at hand. You must enter certain information on the Client Information form before you will be allowed to access the Dates, Times or Calendar forms. The Child Possession Calendar and/or particular forms in the Family Law library that are created with ProDoc use the information that you enter on this window.

To fill out the Client Information form:

1. Click the Petitioner or Respondent button in the Client section to enter your client's status in this matter.

2. In the Petitioner section, enter the petitioner's name in the Name field.
   a. Click the appropriate Male or Female button. The Mother or Father button is then selected for you as appropriate.
   b. If the Petitioner is not the Mother or the Father of the children, click the Other button. The Describe Relationship field appears to the right of the petitioner's name.
      i. You may enter the relationship the petitioner has with the children in this field (e.g., uncle, guardian, conservator, etc.).
      ii. The description that you enter in this field will appear on the calendar whenever the petitioner is mentioned.

3. In the Respondent section, enter the respondent's name in the Name field.
   a. Click the appropriate Male or Female button. The Mother or Father button is then selected for you as appropriate.
   b. If the respondent is not the Mother or the Father of the children in this matter, click the Person With Court-Ordered Relationship button.
i. The Describe Relationship field appears to the right of the respondent's name.

ii. You may enter the relationship the respondent has with the children in this field (e.g., uncle, guardian, conservator, etc.).

iii. The description that you enter in this field will appear on the calendar whenever the respondent is mentioned.

4. The Conservatorship section has two choices you must make.

   a. In the Primary/Sole Managing Conservator section, you must choose whether the primary or sole managing conservator is the Petitioner or the Respondent.

   b. In the Type of Conservatorship section, you must choose if the conservatorship is Joint Managing (both parties) or Sole Managing (one party).

5. If one or both of the parties is Jewish and wants to include the Jewish holidays on the calendar, place a check in the Include Jewish Holidays check box. Two areas of the Include Jewish Holidays section become active.

   a. In the Primary/Sole Managing Conservator section, click the Reform Jew, Orthodox/Conservative Jew or Not Jewish button to establish whether this party is Jewish and wants the Jewish holidays to appear on the Child Possession Calendar.

   b. In the Secondary/Possessory Managing Conservator section, click the Reform Jew, Orthodox/Conservative Jew or Not Jewish button to establish whether this party is Jewish and wants the Jewish holidays to appear on the Child Possession Calendar.

6. In the Children section, enter the names and the birthdays of the children that are the subject of this matter.

7. In the Secondary/Possessory Conservator Has custody of Sibling(s) on child's birthday? section, click the appropriate Yes or No button.

**Child Possession Calendar Toolbar**

![Figure 2, Toolbar](image)

The Child Possession Calendar toolbar consists of the Help, Remove Changes/Restore Changes, Print, Save and Continue, Save and Close and Cancel buttons. The buttons and their actions are discussed below.

**Help:** Click this button to call up the help window for the form you are viewing.

**Remove Changes/Restore Changes:** This button is only active on the Calendar form. It will be titled Remove Changes if you make changes to the displayed calendar. Click this button to remove any changes that you made directly on the calendar. The button title will change to Restore Changes. Click it to restore the changes to the calendar. Changes that you make on the Client Information, Dates and Times forms are not affected.

**Print:** Click this button to print all of the monthly calendars in this file. To print an individual month, click Yes when the Do you wish to Preview this Report box appears and select an individual page from the calendar set.

**Save and Continue:** Click this button to save your work and continue using the Child Possession Calendar.

**Save and Close:** Click this button to save your work and exit the Child Possession Calendar.

**Cancel:** Click this button to exit the Child Possession Calendar without saving the information you
entered during the current session.

**Dates Form**

![Child Possession Calendar - Adams, John M. - Case: Custody and visits](image)

Figure 3, Dates Form

The **Dates** form is used to gather information pertaining to dates and distance. The **Child Possession Calendar** and particular forms in the **Family Law** volume use the information entered here.

To complete the **Dates** form:

1. In the **Select Year and Month for the Calendar** section, click the arrows in the **Year** field to choose the year for the start of the calendar and click the drop-down arrow in **Month** field to select the first month of the calendar.

2. In the **Weekend Possession** section, place a check in the **Parties currently reside within 100 miles of each other** checkbox if this is true.

3. The **When Parties Reside More Than 100 Miles Apart** section becomes active if **Parties currently reside within 100 miles of each other** is not checked. Click the appropriate button for **1st, 3rd & 5th Weekends** or **One Weekend per Month w/ 14 Days Notice** for calculating the secondary conservator's possession schedule.

4. If certain specific criteria exist, a section will appear labeled **Which Party Will Have Possession On (Start Date)**. In these situations, the secondary conservator is selected by default. To change this selection, click the button for either **Petitioner** or **Respondent** as appropriate.

5. The **Date Begins and Ends** section is used to provide or estimate the days for key holidays and summer possession. To add dates, click the calendar icons to open a calendar tool you can use to select the desired dates. You can also add dates by using the arrow buttons in the fields.

a. The holidays are **Spring Break, Summer Vacation, Thanksgiving** and **Christmas**. Set the beginning date in the first field and the ending date in the second field for each holiday. Beginning dates must fall into the calendar year used. The beginning date is assumed to be the
day school lets out for the holiday.

b. Two periods are provided for you to set for the Secondary/Possessory Conservator's Summer Possession fields. If the secondary or possessory conservator is going to have extended possession in the summer, you may schedule up to two periods of time that the children will be with the secondary possessory conservator. To set the summer possession periods:

i. Set the beginning date in the First period field and the ending date in the to field for the first summer period.

ii. Set the beginning date in the Second period field and the ending date in the to field for the second summer period.

c. Check the Estimate box to the right of a vacation period if you are not certain of the exact dates of a holiday vacation schedule. This action will place a footnote on the calendar which advises that the date(s) may need to be adjusted when the school schedule is known.

**Times Form**

![Figure 4, Times Form](image)

The Times form is used to gather information pertaining to time. The Child Possession Calendar and particular forms in the Family Law volume use the information entered here.

To complete the Times form:

1. In the Mid Week section, you will select the appropriate day and begin and end times for Mid Week possession. End Time section days will be adjusted automatically depending upon your choice. If you are not sure which day to choose, review the Standard Possession Order and the Texas Family Code to determine whether Wednesday or Thursday applies to the case at hand.

   a. In the Day section, choose the appropriate day by clicking the button next to either Wednesday or Thursday.
b. In the **Begin Time** section, click the appropriate button to choose to begin possession at 6:00 p.m., **when school is dismissed** or a **time between school dismissal and 6:00 p.m.** If you select the last option, an entry field appears. Enter the appropriate time in the field.

c. In the **End Time** section, click the appropriate button to choose to end possession at **8:00 p.m.** on (selected day), **when school resumes on (appropriate day)** or **other time on (selected day).** If you select the last option, an entry field appears. Enter the appropriate time in the field.

2. In the **Weekends During the Regular School Term and Holidays** section, you will select the **Begin Time** and **End Time** for weekend and holiday possession.

   a. In the **End Time** section, click the appropriate button to choose to end possession at **6:00 p.m. on the last day**, **when school resumes** or **other time on the last day.** In the **Begin Time** section, click the appropriate button to choose to begin possession at **6:00 p.m., when school is dismissed** or a **time between school dismissal and 6:00 p.m.** If you select the latter, an entry field appears. Enter the desired time in the field.

   b. In the **End Time** section, click the appropriate button to choose to end possession at **6:00 p.m. on the last day**, **when school resumes** or **other time on the last day.**

   c. If you choose **6:00 p.m. on the last day** or **when school resumes**, all other entry fields are disabled in this section.

   d. If you choose **other time on the last day**, the five entry fields for weekend, extended holiday, Spring break, Thanksgiving and Christmas are activated. Enter the desired times in the adjacent fields.

3. In the **Weekends Outside Regular School Term** section, you will select the **Begin Time** and **End Time** for weekend possession outside the regular school term.

   a. In the **Begin Time** section, click the appropriate button to select either **6:00 p.m.** or a **time other than 6:00 p.m.** If you select the latter, an entry field appears. Enter the desired time in the field.

   b. In the **End Time** section, click the appropriate button to select either **6:00 p.m. on last day** or a **time other than 6:00 p.m. on last day.** If you select the latter, an entry field appears. Enter the desired time in the field.
Calendar Form

The Calendar form displays a monthly calendar that shows who the conservator with custody is, pick-up and drop-off times, birthdays of the children and holidays. The information displayed is derived from the entries made on the Client Information, Dates and Times forms.

To change information on the calendar:

1. Double-click the date that you want to change.
2. The Change Calendar Information on [date] window appears.
3. Make the desired changes to the Message or Detail field.
4. Click OK.

Note: Information that is changed directly on the calendar will not appear in any documents assembled in ProDoc. You must make changes on the Client Information, Dates and Times forms if you want the changes to appear in documents assembled with ProDoc.

Navigating through Calendar Months. Use the buttons described below to navigate through different months on the Calendar form.

First: Click this button to move to the First month chosen for child possession.

Prior: Click this button to move to the month Prior to the month you are currently viewing.

Next: Click this button to move to the Next month from the month you are currently viewing.

Last: Click this button to move to the Last month that is included in the calendar for child possession.
Divorce Inventory

Getting Started

The Divorce Inventory program allows you to:

- Enter information related to the parties and their marital estate,
- Create scenarios to display and save different divisions of the marital property,
- List and assign marital property,
- Determine after tax property values,
- View pre-tax and after tax statistics for the assets and net estate amounts.

Starting the Program

1. On ProDoc's main menu, click **PowerPacks → Family Law → Divorce Inventory**.

2. The **Select a Case** window appears. To find the client you want to use:
   a. Type the first few letters of the client's last name. As you type, the highlight will move to the next match on the client list. To start over, press the **Backspace** key on your keyboard.
   b. You can also use the scroll bar at the right side of the window to scroll through the alphabetical list.

3. When the selected client is highlighted, you can double-click the name, press the right arrow key on your keyboard, or click the **Show Cases** button to view the client's cases.

4. Select a case by double-clicking a case title. You can also click the title once, then press the **Enter** key or click the **Select Case** button.

5. The program opens to the **General** form.

Navigating the Divorce Inventory Program

There are five tabs across the top of the main program window: **General**, **Property**, **After Tax Values**, **Pre-Tax Statistics** and **After Tax Statistics**. Each tab represents a different form. To move from one screen to another, position the cursor over the tab you want to use and click it.

You can also use hot keys. Wherever a window, screen or field title shows an underlined character, i.e., "Primary Attorney", you can navigate to that entry by holding the "Alt" key and pressing the underlined keyboard character. In the earlier example, pressing Alt + A on your keyboard puts your cursor in the Primary Attorney field.

Toolbar

![Divorce Inventory Toolbar](image)

The toolbar along the bottom of the Divorce Inventory consists of the Help, Import Data, Export Data, Assemble, Save and Continue, Save and Close and Cancel buttons. The buttons and their actions are discussed below.

**Help** – Click this button to call up the help form for the topic you are viewing.

**Import Data** – Click this button to import Divorce Inventory data from a backup file into the Divorce Inventory.
Export Data – Click this button to export data from the Divorce Inventory to a diskette or other preferred form of media.

Assemble – Click this button to save your data and start a document assembly session with the forms that work with the Divorce Inventory.

Save and Continue – Click this button to save the data that has been entered into the Divorce Inventory and continue working with the program.

Save and Close – Click this button to save the data that has been entered into the Divorce Inventory and exit the program.

Cancel – Click this button to exit the Divorce Inventory without saving the information that you entered during the current session.

General Form

On the General form, enter the spouses’ names, which spouse is the petitioner, whether the client is the petitioner or respondent, and the requested court information. You can also load, save, create and delete scenarios on this form.

Note: The Divorce Inventory and/or particular forms in the Family Law library that are created with ProDoc use the information that you enter on this form.

To complete the fields on the General form:

1. Make sure that the proper client and case appear beside Client Name and Case at the top of the form.
2. If the wrong client and/or case appear, click the Select new case button.
a. The **Save Changes?** window appears.
   i. Click **Yes** if you want to save any changes to the current scenario before selecting a new client and case.
   ii. Click **No** if you do not want to save changes to the current scenario before selecting a new client and case.
   iii. Click **Cancel** if you want to return to the scenario that is currently loaded in the Divorce Inventory.

b. If you chose **Yes** or **No**, the **Select a Case** window opens.

c. Highlight a client and case.

d. Click **Select**.

3. Enter the name of the **Husband** and **Wife** in the fields provided.

4. In the **Who is the petitioner** section, click the **Husband** or **Wife** button to show which spouse is the petitioner.

5. In the **What is the Client** section, click the **Petitioner** or **Respondent** button depending on your client’s status.

6. Provide the requested information in the **Court information** section.
   a. Enter the **Cause number**.
   b. Enter the **County**.
   c. Click the drop-down arrow to the right of the **Court type**, and choose the court in which this matter is being heard. The available choices are **District Court**, **County Court** and **County Court at Law**.
   d. Enter the **Court number**.

**Scenarios**

![Scenarios For Current Case](image)

**Figure 3, Scenario Section of General Form**

The **Divorce Inventory** allows you to create **Scenarios**. Scenarios contain a list of the parties’ property and how the property is to be divided. You can divide the property as you want and save each division as a scenario. In fact, creating multiple scenarios for your divorce cases can be a useful negotiating tool. Scenarios can help you compare what the parties want and what the judge is likely to order. Scenarios help you get a better look at the big picture.

When creating multiple scenarios it is important to remember that the scenario on which you are working in the **Divorce Inventory** is not necessarily the scenario that will be selected for assembling documents in ProDoc. This is because out of all of the scenarios you create to determine the best division of property, only one scenario is actually used to assemble documents for your client’s case. There are fields on this form that allow you to see which scenario is being used by the **Divorce Inventory** and which scenario will be used to assemble in ProDoc. Before assembling documents in ProDoc that use information from the **Divorce Inventory**, you should make sure that the correct scenario is displayed in the **Scenario Used in**
You may load, copy, create and delete scenarios using the buttons to the right of the Scenarios for Current Case section. Previously created and saved scenarios are listed in the Scenarios for Current Case window shown below. If there is an icon to the left of a scenario's name, it means that it is currently loaded for use in the Divorce Inventory.

To load a scenario for use in the Divorce Inventory:

1. Highlight the scenario you want to use from the list of scenarios in the Scenarios for Current Case section.
2. Click the Load Selected Scenario into this Inventory Program button.
3. The Confirm window appears and asks if you want to save the currently loaded scenario before loading the scenario you chose in Step 1.
   a. Click Yes if you want to save any changes you made to the currently loaded scenario.
   b. Click No if you do not want to save any changes you made to the currently loaded scenario.
4. The name of the scenario you have just loaded now appears in the Current Scenario Used In This Inventory Program field. At this point your scenario is loaded in the inventory program and is ready to be updated.

To save changes made to a scenario as a new scenario:

1. Click the Copy Current Scenario as New Scenario button.
2. The Confirm window appears.
   a. Click Yes to save the changes that have been made to the current scenario.
   b. Click No to close the current scenario and copy the current scenario and the changes that have been made to a new scenario.
   c. Click Cancel to return to the Divorce Inventory without copying the current scenario.
3. The Create New Scenario window appears.
   a. Enter a name for the scenario in the Scenario Name field.
   b. Enter a description of the scenario in the Scenario Description field.
4. Click OK.

To create a new blank scenario:

1. Click the Create a New Blank Scenario button.
2. The Confirm window appears and asks if you want to save the scenario that is currently loaded in the Divorce Inventory.
   a. Click Yes to save any changes you made to the currently loaded scenario.
      i. The Create New Scenario window appears.
      ii. Enter a scenario name and description.
      iii. Click OK.
      iv. You may now enter information for the scenario.
   b. Click No to discard changes you made to the currently loaded scenario.
      i. The Create New Scenario window appears.
      ii. Enter a scenario name and description.
iii. Click OK.
iv. You may now enter information for the scenario.
c. Click Cancel to return to the Divorce Inventory without creating a new scenario.

To delete a scenario:

1. Select a scenario from the list.
2. Click the Delete Selected Scenario button.
3. The Confirm window appears and asks if you want to delete the selected scenario.
4. Click Yes to delete the scenario.

**Note:** If the scenario you are deleting is the current scenario that is loaded in ProDoc, the Select a ProDoc Scenario window appears. Click the drop down arrow, select another scenario to load in ProDoc and click OK.

If the scenario you are deleting is the only scenario for the selected client and case, the Confirm window appears. Click Yes to delete all of the inventory answers except for the general information which includes, the names of the husband and wife, court information and which party is the petitioner and client.

To change a scenario’s name or description:

1. Select a scenario from the list.
2. Click the Change button.
3. The Change Scenario Description window appears.
4. Enter a new name and/or description for the scenario and click OK.

**Note:** You may also change a scenario’s name or description by clicking on the current name or description in the Scenarios for Current Case section and making the change directly in the field.

The information that you enter for a scenario may be used for document assembly in ProDoc, but the scenario must be loaded in ProDoc before it may be used. The three fields along the bottom of the General form show which scenarios are loaded in the Divorce Inventory and ProDoc, and allow you to load a scenario for document assembly in ProDoc.

![Figure 4, Scenarios Used Fields](image)

The scenarios in the Current Scenario Used In This Inventory Program and the Scenario Used In ProDoc’s Forms fields may be different because the scenario on which you are working in the Divorce Inventory is not necessarily the scenario that you will use when creating documents in ProDoc.

The scenario that is shown in the Current Scenario Used In This Inventory Program field is the scenario that is currently loaded in the Divorce Inventory. This is the scenario to which you can make changes in the Divorce Inventory. You may change this scenario by highlighting a scenario in the Scenarios for Current Case list and clicking the Load Selected Scenario into This Inventory
Program button.

The scenario that is shown in the Scenario Used In ProDoc's Forms field is the scenario that ProDoc will use to create documents. This scenario is used for the actual document assembly in ProDoc. You may change this scenario by clicking the drop-down arrow to the right of the Replace Scenario To Be Used In ProDoc's Forms field and choosing the scenario that you want to use to assemble documents in ProDoc. If you change the scenario, you must click the Save and Continue button before the new scenario is activated in ProDoc.

The forms that can be assembled using information from the Divorce Inventory are:

- 7-1 Inventory & Appraisement of (Name of Party)
- 16-6 Suggested Division of Community Property
- 17-1 Final Decree of Divorce
- 17-6 Agreement Incident to Divorce
- 138-2 Proposed Property Division (NOT SBOT)

Property Form

The Property form allows you to enter details regarding marital and nonmarital property, the value of the property, and the spouse(s) to whom the property is allocated.

To enter property on this form:

1. Highlight an asset or liability description.
2. Click New.
3. The (Item) Will Be Added window appears.
4. Complete the fields for the asset or liability you are recording.
5. Click OK.

Note: You may change an entry by highlighting it and clicking Update. To delete and entry, highlight it and click Delete.

You may locate asset or liability descriptions by entering a search word or phrase in the blank field above the Asset/Liability Description window and clicking Find. The first description that meets your search criteria will be highlighted. If the asset or liability description is not the one for which you are searching, click Find until the description for which you are searching is located. When the search comes to the last item that it found, it will stay on that item when you click Find.

Note: Searches start from the point at which the cursor is positioned. If you want to search from the beginning, you should place the cursor at the top of the Asset/Liability Description list.

There are two views on the Property form from which you may choose; value and checkmark. The view that you choose determines how allocations appear on the Property form and the different reports that you may print.

You may view the dollar amounts of the property that is allocated to each spouse, by selecting Value in the Show Allocation As section.
If you select **Checkmark**, the **Property** form displays checkmarks that designate whether an asset or liability has been allocated to a spouse, or divided between the spouses.

To view all asset and liability descriptions in the **Asset/Liability Description** window, click the **Expand** button. To view only the main titles of the category groups within the **Asset/Liability Description** window, click the **Contract** button.
The **Total community estate** and **Net community estate allocation** amounts appear in red beneath the list of assets and liabilities. When viewing the allocations as checkmarks, the husband’s and wife’s percentage amounts of the net community estate do not display in this section.

**Property Form Toolbar**

The **Property** form has a toolbar that appears only on that form. The toolbar consists of buttons that allow you to perform tasks needed to complete the inventory. These buttons are described below.

**New** – Add description and value of an asset or liability to the inventory.

**Update** – Modify a highlighted asset or liability.

**Delete** – Remove a highlighted asset or liability.

**Print** – View or print the **Divorce Inventory Summary Sheet**.

**Send to Excel** – Send data from the Property tab to an Excel spreadsheet.

**Un-assign** – Remove an allocation to the husband and/or wife for the highlighted asset or liability.

**Split** – Divide the highlighted asset or liability between the spouses.

**Husband** – Allots the highlighted asset or liability entirely to the husband.

**Wife** – Allots the highlighted asset or liability entirely to the wife.
After Tax Values Form

The **After Tax Values** form allows users to enter amounts for the **Cost or Basis**, **Cost of Sale** and **Tax Rate**, calculates tax amounts and displays net values after taxes. Amounts on this form are categorized as **Cost or Basis**, **Current Value**, **Cost of Sale**, **Tax Rate (%)**, **Tax**, **Net to Husb.** and **Net to Wife**.

You may locate asset or liability descriptions by entering a search word or phrase in the blank field above the **Asset/Liability Description** window and clicking **Find**. The first description that meets your search criteria will be highlighted. If the asset or liability description is not the one for which you are searching, click **Find** until the description for which you are searching is located. When the search comes to the last item that it found, it will stay on that item when you click **Find**.

**Note:** Searches start from the point at which the cursor is positioned. If you want to search from the beginning, you should place the cursor at the top of the **Asset/Liability Description** list.

Click the **Expand** button to view all of the asset and liability descriptions in the **Asset/Liability Description** window. Click the **Contract** button to view only the **COMMUNITY ESTATE** title. From the contracted view, you may click on the plus signs that appear to the left of the categories to locate the asset or liability description that you want to complete or update.

The **Net community estate** and **Percentage of amount** are displayed in red along the bottom of the form.

There is a small toolbar on this form. The buttons are **Update**, **Print** and **Send to Excel**.

**Update** – Modify a highlighted asset or liability.

**Print** – View or print the **Divorce Inventory Community Net Value Summary Sheet**.

**Send to Excel** – Send data from the **After Tax Values** tab to an Excel spreadsheet.
To enter the **Cost or Basis**, **Cost of Sale** and **Tax Rate** of an asset:

1. Highlight an asset and click the **Update** button.
2. The **Change the Cost and Tax Rate** window appears.
3. Enter the **Cost or Basis**, **Cost of Sale** and **Tax Rate (%)** amounts.
   a. For your principal residence, you will need to enter the **Principal Residence Exclusion**.
   b. After you enter the principal residence exclusion, click on the **Depreciation** button and enter the depreciation recapture amount (if any).
4. Click **OK**.

**Note:** You also may enter amounts directly on the form, by clicking on an asset’s **Cost or Basis**, **Cost of Sale** or **Tax Rate (%)** column and entering the amount.

To print a **Divorce Inventory Community Net Value Summary Sheet** that lists the community assets and liabilities that are being claimed:

1. Click **Print** (button with picture of printer on it).
2. The **Preview** window appears and asks if you want to review the report.
   a. Click **Yes** if you want to review the summary sheet before printing it.
   b. Click **No** if you want to print the summary sheet without reviewing it.
   c. Click **Cancel** if you do not want to view or print the summary sheet.

**Pre-tax Statistics Form**

The **Pre-tax Statistics** form displays community and separate assets and liabilities, and net estate amounts before taxes have been deducted. The form is divided into **Pre-tax Community Assets and Net Estate**, **Pre-tax Separate Assets and Net Estate**, and **Pre-tax Community and Separate Assets and Net Estate**.
Pre-tax Separate Assets and Net Estate and Pre-tax Community and Separate Assets and Net Estate sections. These sections display pre-tax amounts for the total community assets and liabilities, and the net community estate. The totals are further broken down to show the amounts allocated to the husband and wife, and the amounts that have not been allocated. The amounts that have been allocated to the husband and wife are also shown as percentages in the Pre-tax Community Assets and Net Estate and Pre-tax Community and Separate Assets and Net Estate sections.

To print statistics sheets:

1. Click the Print Statistics Sheet button.
2. A list appears with the selections Print this sheet, Print after tax sheet or Print both pre-tax and after tax sheets.
3. Select the statistics sheet(s) you want to print from the list.
4. The Preview window appears and asks if you want to review the report.
   a. Click Yes if you want to review the statistics sheet before printing it.
   b. Click No if you want to print the statistics sheet without reviewing it.
   c. Click Cancel if you do not want to view or print the statistics sheet.

After Tax Statistics Form

The After Tax Statistics form displays community and separate assets and liabilities, and net estate amounts after taxes have been deducted. The form is divided into After Tax Community Assets and Net Estate and After Tax Community and Separate Assets and Net Estate sections. The difference between the two sections is that the After Tax Community and Separate Assets and Net Estate section includes separate assets and liabilities along with the community assets and liabilities. These totals are further broken down to show the amounts allocated to the husband and wife, and the amounts that have not been allocated. The amounts that have been allocated to the husband and wife are also shown as percentages.

Figure 10, After Tax Statistics Form
To print statistics sheets:

1. Click the **Print Statistics Sheet** button.
2. A list appears with the selections **Print this sheet, Print after tax sheet** or **Print both pre-tax and after tax sheets**.
3. Select the statistics sheet(s) you want to print from the list.
4. The **Preview** window appears and asks if you want to review the report.
   a. Click **Yes** if you want to review the statistics sheet before printing it.
   b. Click **No** if you want to print the statistics sheet without reviewing it.
   c. Click **Cancel** if you do not want to view or print the statistics sheet.

**Economic Contribution Claims by the Community Estate**

**Debt of husband (before):** If the community estate has a claim against husband's estate for economic contribution due to reduction by the community estate of the principal amount of a debt secured by a lien on property owned before marriage by husband, to the extent the debt existed at the time of marriage, insert the claim under the category "Debt of husband (before)".

**Debt of wife (before):** If the community estate has a claim against wife's estate for economic contribution due to reduction by the community estate of the principal amount of a debt secured by a lien on property owned before marriage by wife, to the extent the debt existed at the time of marriage, insert the claim under the category "Debt of wife (before)".

**Gift to husband (during):** If the community estate has a claim against husband's estate for economic contribution due to reduction by the community estate of the principal amount of a debt secured by a lien on property received by husband by gift, devise, or descent during the marriage, to the extent the debt existed at the time the property was received, insert the claim under the category "Gift to husband (during)".

**Gift to wife (during):** If the community estate has a claim against wife's estate for economic contribution due to reduction by the community estate of the principal amount of a debt secured by a lien on property received by wife by gift, devise, or descent during the marriage, to the extent the debt existed at the time the property was received, insert the claim under the category "Gift to wife (during)".

**Capital improvement of husband (during):** If the community estate has a claim against husband's estate for economic contribution due to reduction by the community estate of the principal amount of that part of a debt (including a home equity loan) incurred during the marriage, secured by a lien on property, and incurred for capital improvements to property belonging to husband's separate estate, insert the claim under the category "Capital improvement of husband (during)".

**Capital improvement of wife (during):** If the community estate has a claim against wife's estate for economic contribution due to reduction by the community estate of the principal amount of that part of a debt (including a home equity loan) incurred during the marriage, secured by a lien on property, and incurred for capital improvements to property belonging to wife's separate estate, insert the claim under the category "Capital improvement of wife (during)".

**Separate repayment agreement of husband:** If the community estate has a claim against husband's estate for economic contribution due to reduction by the community estate of the principal amount of that part of a debt incurred during the marriage, secured by a lien on property owned by husband for which the creditor agreed to look for repayment solely to the separate marital estate of husband, and incurred for the acquisition of, or for capital improvements to, the property, insert the claim under the category "Separate repayment agreement of husband".
Separate repayment agreement of wife: If the community estate has a claim against wife's estate for economic contribution due to reduction by the community estate of the principal amount of that part of a debt incurred during the marriage, secured by a lien on property owned by wife for which the creditor agreed to look for repayment solely to the separate marital estate of wife, and incurred for the acquisition of, or for capital improvements to, the property, insert the claim under the category "Separate repayment agreement of wife".

Refinancing of debt – husband: If the community estate has a claim against husband's estate for economic contribution due to refinancing of the principal amount of any debt above, to the extent the refinancing reduced the principal amount in a manner described in the appropriate section, insert the claim under the category "Refinancing of debt – husband".

Refinancing of debt – wife: If the community estate has a claim against wife's estate for economic contribution due to refinancing of the principal amount of any debt above, to the extent the refinancing reduced the principal amount in a manner described in the appropriate section, insert the claim under the category "Refinancing of debt – wife".

Expenditures, other than debt, for husband: If the community estate has a claim against husband's estate for economic contribution due to expenditures for capital improvements to property belonging to husband's separate estate other than by incurring debt, insert the claim under the category "Expenditures, other than debt, for husband".

Expenditures, other than debt, for wife: If the community estate has a claim against wife's estate for economic contribution due to expenditures for capital improvements to property belonging to wife's separate estate other than by incurring debt, insert the claim under the category "Expenditures, other than debt, for wife".

Economic Contribution Claims Against the Community Estate

Reduction of debt by husband: If husband's estate has a claim against the community estate for economic contribution due to reduction by husband's separate estate of the principal amount of that part of a debt (including a home equity loan) incurred during the marriage, secured by a lien on property, and incurred for the acquisition of, or capital improvements to, property belonging to the community estate, insert the claim under the category "Reduction of debt by husband".

Reduction of debt by wife: If wife's estate has a claim against the community estate for economic contribution due to reduction by wife's separate estate of the principal amount of that part of a debt (including a home equity loan) incurred during the marriage, secured by a lien on property, and incurred for the acquisition of, or capital improvements to, property belonging to the community estate, insert the claim under the category "Reduction of debt by wife".

Refinancing of debt by husband: If husband's estate has a claim against the community estate for economic contribution due to refinancing of the principal amount of any debt above, to the extent the refinancing reduced the principal amount in a manner described in the section, insert the claim under the category "Refinancing of debt by husband".

Refinancing of debt by wife: If wife's estate has a claim against the community estate for economic contribution due to refinancing of the principal amount of any debt above, to the extent the refinancing reduced the principal amount in a manner described in the section, insert the claim under the category "Refinancing of debt by wife".

Expenditures, other than debt, by husband: If husband's estate has a claim against the community estate for economic contribution by husband's separate estate due to expenditures for capital improvements to
property belonging to the community estate other than by incurring debt, insert the claim under the category "Expenditures, other than debt, by husband".

**Expenditures, other than debt, by wife:** If wife's estate has a claim against the community estate for economic contribution by wife's separate estate due to expenditures for capital improvements to property belonging to the community estate other than by incurring debt, insert the claim under the category "Expenditures, other than debt, by wife".
UCCJEA Affidavit Program

Program Overview

The UCCJEA (Uniform Child Custody Jurisdiction and Enforcement Act) Affidavit program is designed to assist you with entering the current address or whereabouts of each child, as well as the five year residential history of each child. As a part of the affidavit, you can enter additional information regarding ancillary matters which affect the children. Finally, you can also list all third-parties claiming visitation and/or custody rights to the children.

This feature allows you to:

- Enter information about the parties and the children that are affected by the proceeding.
- Enter the current address or whereabouts of each child, as well as the five year residential history of each child.
- Enter the names and addresses of nonparties who may have actual physical custody of the child(ren), or are claiming visitation or custody rights of the child(ren) subject to the action.
- Enter other proceedings which concerned the child(ren) affected by this suit in which the affiant participated or had knowledge.
- Assemble the UCCJEA Affidavit.

Getting Started

Starting the Program

2. The Select a Case window appears. To find the client you want to use:
   a. Type the first few letters of the client's last name. As you type, the highlight will move to the next match on the client list. To start over, press the Backspace key on your keyboard.
   b. You can also use the scroll bar at the right side of the window to scroll through the alphabetical list.
3. When the selected client is highlighted, you can double-click the name, press the right arrow key on your keyboard, or click the Show Cases button to view the client's cases.
4. Select a case by double-clicking a case title. You can also click the title once, then press the Enter key or click the Select Case button.
5. The program opens to the General form.

Navigating the UCCJEA Affidavit Program

There are four tabs across the top of the main program window: General, Children, Nonparty, and Other Proceedings. Each tab represents a different form. To move from one form to another, position the cursor over the tab you want to use and click on it.

You can also use hot keys. Wherever a window, screen or field title shows an underlined character, i.e., "Respondent", you can navigate to that entry by holding the "Alt" key and pressing the underlined keyboard character. In the earlier example, pressing Alt + R on your keyboard puts your cursor in the Respondent field.
## Toolbar

![Toolbar Image](image)

Figure 1, Toolbar

The toolbar along the bottom of the **UCCJEA Affidavit** program consists of the **Help**, **Assemble**, **Save and continue**, **Save and close** and **Cancel** buttons. The buttons and their actions are discussed below.

**Help** – Click this button to call up instructions for the window you are viewing.

**Assemble** – Click this button to assemble the UCCJEA Affidavit in ProDoc.

**Save and continue** – Click this button to save your work and continue working in the program.

**Save and close** – Click this button to save your work and close the UCCJEA Affidavit program.

**Cancel** – Click this button to exit the program and not save any work that you have done since the last save. A message box will appear and tell you that canceling will cause you to lose all information you entered since the last save, and will ask you if you want to continue. To return to the program to save your work, click **No**. If you do not want to save your work, click **Yes**.

## General Form

On the **General** form, select whether the affiant is the petitioner, respondent or some other party (e.g., intervenor). The client’s name will appear in the corresponding field. Enter the opposing party’s name in the **Petitioner** or **Respondent** field. If the affiant is not the petitioner or respondent and you have checked the **Other** radio button, the affiant’s name will appear in the **Other** field. Select whether to include a request for nondisclosure in the **Include request for nondisclosure** section. In the **Court Information** section enter the county, type of court, and the court and cause numbers.

![General Form Image](image)

Figure 2, General Form
Children Form

The **Children** form lists the children that are affected by the proceeding. From this form you can enter the current address or whereabouts of each child, as well as the five year residential history of each child.

![Children Form](image)

**Figure 3, Children Form**

To add a child to the list of children affected by the proceeding:

1. Click on the **Check here if all children have lived at the same address(es) for the previous five years** checkbox if the children have lived at the same address(es) for the last five years.
   a. By checking this checkbox, any child entered after the initial child will automatically list the same addresses as the initial child.
   b. If you uncheck the **Check here if all children have lived at the same address(es) for the previous five years** checkbox, you will have to enter the addresses for all of the children separately.

2. Click **New**.

3. The **Adding Child Information** window appears.
a. Enter a child’s name.
b. Click once anywhere inside the Addresses section box.
c. Click New to add the current address of the child.
d. The Adding Child’s Current Address window appears.

i. If you do not know the child’s current address, place a check in the Check if child’s current address is not known checkbox. A field appears and asks you to enter what you know about the child’s current whereabouts and asks you to complete the sentence “The child’s present whereabouts are...”.

ii. If you know the child’s current address, complete the Street, City, State and Zip fields and click OK. You can also click the button next to the Street field to select any address already entered in the program.

e. To enter additional addresses, click New.
f. The Adding Child Address Information window appears.

i. Enter the Begin Date and End Date in the corresponding fields.

ii. Enter the child’s address in the Street, City, State and Zip fields.

g. Click New to add the current addresses of each person the child lived with during the time span. After completing the window, click OK.

h. If you want to add more addresses for the child, click the Add Another button.

i. When you finish entering the addresses, click OK.
4. Click **OK**.

To update a child on the list of children affected by the proceeding:

1. Highlight the child’s name on the list of children that appear on the **Children** form.
2. Click **Update**.
3. The **Changing Child Information** window appears.
   a. If you need to change the child’s name, do so and click **OK**.
   b. If you need to change beginning date, ending date, child’s address, person lived with or person’s address, highlight the record you need to change and click **Update**.
      i. The **Changing Child Address Information** window appears.
      ii. Make the necessary changes.
      iii. Click **OK**.

### Nonparty Form

The **Nonparty** form allows users to enter the name and addresses of nonparties who may have actual physical custody of the child(ren), or are claiming visitation or custody rights of the child(ren) subject to the action.

![Image of Nonparty Form]

Figure 6, Nonparty Form

To enter the nonparty claiming actual physical custody, visitation or custody rights of the child(ren) subject to the action:

1. Click **New**.
2. The **Adding Nonparty Information** window appears.
a. Enter or select the nonparty’s name.

b. In the Claim type section select whether the nonparty is claiming Physical Custody, Legal Custody and/or Visitation.

c. If the nonparty has actual physical custody of the child(ren), select This person has actual physical custody.

d. Enter the nonparty’s address in the Address section.

e. Click OK.

**Other Proceedings Form**

The Other Proceedings form lists other relevant proceedings concerning the child(ren) affected by this suit in which the affiant was involved.

To enter other proceedings in which the affiant participated and which concerns a child subject to the instant proceeding:
1. Click New.

2. The Adding Other Proceedings Participated In Information window appears.
   a. Complete the Capacity of Affiant, State, Court and Cause no. fields.
   b. If a judgment or order was issued, click the Check here if a determination was made on this proceeding checkbox.
   c. If a child custody determination has been made, enter or select the date of the order or judgment in the Date of Order/Judgment field.
   d. Click OK.

For other proceedings concerning the child(ren) in which the affiant has knowledge, enter the proceedings directly in the Describe the other proceeding, including the court, cause number, and nature of the case, that might affect this matter section.

To enter the requested information:

1. Click in the field and type in your answer directly.

2. In the affidavit, the information that you enter will appear in the context "The following proceeding could affect the current proceeding...," and you are expected to finish the sentence (e.g., suit for the termination of the parental rights of the presumed father, Cause No. 04-CI-347724, in the 37th Judicial Court).
Glossary

Browse for Folder

This window appears when you click the **Browse** button next to a directory dialog box. You use this window to search through folders to choose where you wish to save files.

You can navigate through the folders by using both the vertical and horizontal scroll bars on the window. You can also use keyboard navigation keys (arrow, Page Up/Down, Home, etc.) to move to different folders.

Available file system folders and drives are shown in a tree structure similar to the one used by Windows Explorer. You can click ☐️ to expand the tree for the folder/drive, or click ☑️ to contract the tree.

Double-click a folder to select it, or highlight the desired folder and click the **OK** button. Click the **Cancel** button to exit the window without choosing a folder.

Clipboard

The Clipboard is a temporary Windows storage area for objects like text blocks. You insert text to the clipboard with the cut or copy commands. Text in the clipboard can be pasted into the document at the current location.

Common Controls on Browse Windows

The following fields, buttons, keys, and menu items are commonly found on browse windows in ProDoc.

**Fields and Buttons**

- **Add** or **New** - Opens dialog window to add a new record to the database.
- **Change** or **Update** - Opens dialog window to change the details of the record which is highlighted at the time the button is selected.
- **Delete** - Deletes the record which is highlighted at the time the button is selected.
- **Select** - Selects the record which is highlighted at the time the button is selected.

**Keys**

- **Insert** - Opens dialog window to add a new record to the database.
- **Delete** - Deletes the record which is highlighted at the time the delete key is pressed.

**Menu Options**

- **Close** - Closes the window and returns you to the previous window.
- **Edit or Change** - Opens a drop-down menu containing options for adding, changing and deleting records.
- **Help** - Calls up the standard Windows help system.

On some browse screens, you can right click on a record listing to display a floating drop-down menu with the new, update, and delete options.
**Configuration File**

Configuration files let you customize your documents in ways not possible through the Formatting Options windows. Configuration files can contain headers, footers, page numbers, fonts, or any other feature you would normally put at the beginning of a document. Refer to your particular word processor's documentation to determine how to create a file containing headers, footers, etc.

When a document is assembled, ProDoc checks for a configuration file. If one or more configuration files that apply to the document exist, ProDoc inserts the highest priority configuration file into the document. If the configuration file sets the value of one of the Formatting Options items, e.g. left margin, that value will override any value set in the Formatting Options window.

There are three types of configuration files:

- The **global configuration file** applies to all documents and has the highest priority. It is stored as GLOBAL.CIF in the ProDoc home directory.
- A **volume configuration file** applies to all documents in one volume. Each file is stored as VOLUME.CIF in the subdirectory of the volume to which applies.
- A **specific document configuration file** applies to a single document. Each is stored as DOCNAME.CIF, where “DOCNAME” is the filename of the form from which the document is generated, in the subdirectory of the volume containing the form.

**Copy**

Copying text is a common word processing procedure. The text is duplicated to the clipboard. From the clipboard, you can paste the text to another section of the document.

**Cut**

Cutting text is a common word processing procedure. The text is removed (cut) from the document and stored in the clipboard. From the clipboard, you can paste the text to another section of the document.

**Default Answers**

Default answers are automatically displayed as a proposed answer when a question is asked by ProDoc. This feature saves a tremendous amount of time for answers which are the same over and over again. One example of a default answer is the address block for a law office.

When a default answer is displayed during document assembly, you can accept it and keep going or simply type over it if the answer you want is different than the default. You can set your own default answers. ProDoc will use its logic capabilities to create default answers.

**Directory**

The location where you want to save completed documents. This must include a valid drive (floppy drive or hard drive) and the subdirectories if applicable. For example, since ProDoc is normally located in the PRODOC subdirectory on your hard drive (C drive), the directory would be C:\PRODOC.

**Filename**

A filename is the name of the file under which you want to save completed documents. Filenames can be as descriptive as the full name of the form, e.g. Final Divorce Decree. They can also include conventional word processor file extensions such as .doc or .wpd.
Form Sets

Form sets are groups of related forms which are often assembled at the same time. You can define these sets of forms so that during a document assembly session, you can select a number of forms by choosing the name of the set.

Global

Global refers to items that apply across all ProDoc volumes.

Global Questions

Global questions are questions which apply across all ProDoc volumes.

Highlight

Highlight means to set focus to an item that you want acted upon. On a list in a browse screen, an item is highlighted when it is in reverse color. Buttons and other items on a screen are highlighted when they are in reverse color or when a faint dotted outline appears on them. Use the up and down cursor keys to highlight an item in a browse list and use TAB and SHIFT+TAB to highlight other items on a window.

License

License is authorization to use software on a properly registered computer under the terms of a legal agreement. Your use of ProDoc is governed by a License Agreement which spells out how the program can be used. The software can only be used by an authorized licensee under the specific limitations set forth by the License Agreement.

Master Forms

Master forms are the text files ProDoc uses to assemble your documents. They contain paragraphs of legal text and tokens to indicate the questions you must answer. These documents are stored as word processing files and can be modified for your specific practice.

Paste

Pasting text is a common word processing procedure. The text must be cut or copied to the clipboard. From the clipboard, the text is inserted into the document at the current cursor location.

QuickText

QuickText allows you to store custom blocks of text to paste into answers. You use QuickText for items like an attorney's signature block where it would not be appropriate to have a default answer (as for a firm with several attorneys), but you do not want to type the information every time. Store each entry as a QuickText item and paste the data as an answer where it is required.

Registration

Registration is usually completed when you first install and run ProDoc. Your registration will remain current as long as you use the WebUpdate feature to install periodic updates or load the updates from CD if you don't have an Internet connection. If you need to register ProDoc again, you can click the following link to view the registration processes.

Select

You may select an item by:

1. Clicking on an item with the left button of your mouse.
2. Highlighting an item and then pressing ENTER.
3. If an item has a hot key, holding the ALT key while pressing the hot key.

**Supplemental Forms**

Supplemental forms are forms which you add to a volume to extend the power of ProDoc. These forms are not included in the volume(s) provided with the program, but are created by the user for a specific purpose.

**Token**

Tokens are the six character codes used to identify a question or other object in ProDoc. When ProDoc finds a token in a master form, that token tells it what question to ask, how much room to provide for the answer, etc. As an example, a token could appear in master forms as ~P1234S.

**ToolTips**

ToolTips are small help balloons that appear when the cursor is placed over a control (menu, field, or button). These tips show the purpose of the control and what it will do.

**Volume**

Volumes are collections of master forms and data files which are used by ProDoc. Each volume usually deals with a single area of law, such as Real Estate, Family Law, Litigation, etc. Volumes must be installed before they can be used by ProDoc.

**Volume Questions**

Volume questions are questions supplied with a particular volume, such as Business Organizations or Family Law. These questions are used to assemble a document for your specific legal matter and insert the appropriate information for your client and case.
Appendices

Appendix A - Networking ProDoc

Benefits

Networking with ProDoc can provide your law office with many benefits, including:

**Software Sharing** - Networking allows you to install ProDoc to a central location on your network server or host computer which permits all other computer work stations to have concurrent access to the program. By networking your computers, master forms libraries (templates), client and case data and completed documents can then be shared by all users.

**Increased Office Productivity** – With ProDoc networked, you can share client and case information by storing client data and completed documents in a central location, providing easy access for everyone networked. A central location also streamlines your backup procedure.

**Decreased Equipment Cost** – With a network, everyone in your office can share printers, fax machines, modems and CD-ROM drives. For example, if your firm has two attorneys, two secretaries, and an office manager, you might need three printers, one for each attorney / secretary and one for the office manager. A network also allows you to extend the useful lives of older PCs by providing access to newer PCs and their associated peripherals.

Drawbacks

Networking does have some drawbacks. Two of the more obvious ones are:

**Cost** – Expenses to network a law office can be higher than usual depending on how sophisticated a network you want to create.

**Knowledge** – Networks require greater expertise to set up and maintain than stand alone personal computers. Is there someone on your staff with networking skills or who is willing to learn? If not, can you afford to hire someone with networking knowledge?

Types of Networks

There are two fundamental types of networks, peer-to-peer and client-server. Each type has its own capabilities and limitations. Which type of network you elect to use depends primarily on your firm’s size, requirements and budget. ProDoc is compatible with both peer-to-peer and client-server networks as discussed on the next page.

**Peer-To-Peer Networks** - In a peer-to-peer network set up, one computer will serve as a “Host” computer on which ProDoc is preferably installed. A peer-to-peer network is a good choice when you have only a few computers, you do not expect your network to expand in the near future, your budget is restricted, and security is not an issue. Each user does the day-to-day administration at their computer. There is no central administration to maintain and a relatively low level of security. The cost of setting up a peer-to-peer network is also minimal. You need not purchase a dedicated network operating system, a server. All that’s needed is a network interface card for each computer, a network hub and sufficient network cable to physically link all computers together. Peer-to-peer networks normally require less administration. The only drawback is an increased potential for slower data exchange rate between the workstation and the host computer. Your local computer technician can probably assist you in setting up this type of network.

**Client-Server Networks** - This is the more sophisticated type of networking environment. A sole
A dedicated computer acts as the “network server”. The computers networked to it act as “clients”. ProDoc is preferably installed only on the server. A common misconception is that you must purchase a large powerful computer marketed as a server. While that is sometimes true, small networks may only require a reasonably capable PC running a server version of a networking operating system such as Windows Server. It is the job of the dedicated network server (sometimes called a “file-server” or “Application-Server”) to keep track of all users and validate their log on requests. The server stores most, if not all, applications and data files, provides centralized administration for the network, and a higher level of security for your programs and files. In a client-server network, all users must initially log on to gain access to the server. A network administrator can assign permissions to users so that they only gain access to the resources they need. This protects your information from unauthorized access. Otherwise, people might attempt to gain access to confidential files on your computer via the network. This type of a network is usually more expensive to install. In addition to network cards, a network hub and cables, you will need to purchase a network operating system such as Windows Server. It is highly recommended that you consult a network specialist for assistance for this type of network.

**Preferred Network Installation Configuration**

If your office computers are networked, we recommend you install ProDoc on your network server or "Host" computer.

For a client-server network, ProDoc should normally be installed only on the dedicated network server. For a peer-to-peer network, ProDoc should be similarly installed only on the computer you have designated as the Host computer.

Each Windows client workstation or peer computer should have a shortcut icon on its Windows desktop to start ProDoc. Refer to “Setting Up User Workstations”, discussed later in this appendix, for assistance with creating shortcuts and icons.

This installation method creates a centralized database for storage of client and case information and data files. It also permits all network users to access Client/Case information entries made by other networked users. This eliminates duplication of data on individual workstations and ensures all documents are centrally located and contain consistent information for each client and case. A ProDoc network installation is also the simplest to keep current, since periodic ProDoc update releases only need to be installed once to the server or host computer.

**NOTES:**

- ProDoc is normally installed to a mapped shared network drive location such as F:\ProDoc. Optionally, you can install ProDoc under a Universal Naming Convention (UNC) scheme where computer names are substituted for a drive letter, for example \GEORGE\PRODOC. Contact your network technician if you are uncertain about how your network is configured.

**Installing and Configuring ProDoc on a Network**

**Step 1 - Install the program.** Begin by installing ProDoc on the network server or host computer. Insert the CD and follow the prompts. If needed, consult the procedures in Chapter 1 of this manual.

**NOTES:**

- These procedures apply to new customers and to those customers migrating from stand-alone to a network installation. Previous users who have saved ProDoc data should follow these procedures, then consolidate data as explained later in this appendix.
- Normally, you should only install ProDoc to a single location on the server or host computer. There is no need to separately install ProDoc on any of the other client or peer workstations. However, you may want to separately install it to a laptop or other non-networked computer.
Step 2 - Establish user access. Before ProDoc can be used, it must be “shared” with the other computers on the network. All users must have full access and permissions (read and write) to the computer/directory in which ProDoc is installed. Likewise, if completed documents are to be saved to a central directory on a network drive (preferred), all users must also have full access to that directory. Contact your local network professional for assistance.

Step 3 - Create workstation shortcuts. To enable networked users to run ProDoc from their workstations, you must create a shortcut on each workstation.

1. Right click anywhere in the middle of the workstation desktop.
2. From the menu, click New and then click Shortcut.
3. In the Create Shortcut dialog box, enter the Command line where ProDoc is installed. For example: X:\PRODOC\PROWIN.EXE (where X is the network drive letter where the program directory and files are located). Alternatively, you may click the Browse... button to browse to the correct location. Then, click Next.
4. In the dialog window, enter “ProDoc” as the name for the shortcut and click Finish.
5. To start ProDoc, simply double click this shortcut.

Step 3 - Run ProDoc for the first time. When starting ProDoc, you will be asked to enter your initials or login name. This is necessary in order to establish new operating parameters or access existing parameters for each network user. The first user who runs ProDoc is automatically assigned as a Supervisor. See the Manage User Login section which explains this menu item. Supervisors can designate others as Supervisors or Users and manage various user settings.

Follow the prompts on succeeding windows to complete other setup options (described in Chapter 1).

If you are a new user with no ProDoc data or other installations, you are finished.

Migrating from Stand-alone Installations to a Network Installation

If you have established a network in your office but are still using one or more stand-alone installations, simply install ProDoc on your server or host computer. If you do not yet have a network but are planning to establish one, you will first need to decide on certain hardware and software alternatives. We recommend that you seek assistance from a computer technician in your area with networking experience.

Once you install ProDoc on your server or host computer, you will need to transfer your client/case files (if any exist) to the ProDoc directory on the server, uninstall all previous installations and create desktop shortcuts on each of the workstations as follows:

1. Follow the steps above to install ProDoc to the network server or host computer and configure workstations.
2. Double click the ProDoc shortcut icon. You will most likely receive a message indicating that ProDoc’s location may have changed and asking if you want to use the old or new location. Click OK to open ProDoc from its new location.
3. In order to continue to use previously created client/case information, that data must be consolidated into the server's ProDoc directory. You do this by using ProDoc's Database Transfer, discussed in Chapter 3, as follows:
   - Have your network administrator map each applicable workstation with a unique drive letter.
   - Log on to ProDoc on the server from one of the workstations.
   - Click Tools from the main screen menu, then Database Transfer and select Transfer Client
**Data In.**

- Browse to the correct previously mapped workstation drive and double click the ProDoc directory where you will be transferring data from and click **OK**.
- The **Select Clients** window will appear listing all of the clients stored in that workstation's ProDoc directory. Normally you will click the **Select All** button and click **OK**. This will transfer all client and case information to the server's ProDoc directory. However, if you would like to selectively transfer clients, simply select the clients you want to transfer and then click **OK**.
- The client information will start transferring to the server. Please be patient as this procedure can take considerable time, depending on the size of your client list.
- You will receive a screen message when the transfer is complete. Click **OK** to return to the ProDoc main window. Repeat these steps as necessary for other applicable workstations.

**NOTE:** The client/case transfer process can become complex when attempting to consolidate data for clients that exist on two or more computers. ProDoc may ask you whether two clients or two cases are really the same client and case. Carefully read the information in the question window before answering.

- Start ProDoc on the server, click **Clients & Cases** and then **Client/Case Manager** to inspect your client and case data base to make sure it is intact and includes all of the client/case data from your other installations. After verifying the data, assemble a simple document with client and case information to make sure the program is fully operational and that completed documents are saved to the desired location, preferably to a central location on the server.
- When you are confident of your new network installation, it should be safe to delete ProDoc from each workstation where it had been previously run. We recommend that you manually delete the entire ProDoc directory from the workstation's local drive by highlighting it in Windows Explorer and pressing the **Delete** key. You should also delete the ProDoc group from the C:\Windows \Start menu\Programs directory, since you will be starting ProDoc from the windows desktop shortcut.

**Appendix B - How ProDoc Works**

**THE ASSEMBLY PROCESS**

ProDoc assembles documents in a two-phase process. During the first phase, called the assembly phase, ProDoc asks questions and then uses the answers to "cut and paste" the appropriate clauses, paragraphs and words together to create the basic document. In the second phase, ProDoc asks fill-in-the-blank questions then inserts the answers into the assembled document. This is a general description, but there are exceptions to this scheme.

**MASTER FORMS**

The basic forms that ProDoc uses during the assembly process are called master forms (templates). This is a standard word processing document, which contains special codes called tokens in places where questions are to be asked or text is to be inserted, or at the beginning or end of blocks of text.

**SUPPLEMENTAL FORMS**

When you subscribe to a ProDoc volume, it contains master forms (templates). You may also add your own forms to ProDoc as supplemental forms. The process of creating your own supplemental forms is discussed in **Appendix D** of this manual.

**OBJECTS**
An object is a set of instructions which tells ProDoc to ask a question, insert text, perform a calculation, etc. Most of these objects are stored in database files. There are five basic types of objects used in ProDoc:

**Questions** - Question objects tell ProDoc to ask a question. There are two categories of questions - assembly questions and merge questions. Assembly questions are processed during the assembly phase and the answers are used to determine what clauses, paragraphs and words to insert into and delete from the document. Merge questions are normally processed during the second (merge) phase. Their answers are usually merged into the document. On occasion, a merge question may be asked early in the assembly phase when the information is needed earlier for some special purpose.

**Processors** - Processor objects tell ProDoc to calculate a value, manipulate pieces of text to create something different or to import a text file into the current document. There are assembly phase processors and merge phase processors.

**Delete** - Delete objects tell ProDoc to delete blocks of text if a particular condition exists. For example, if the user answers a question indicating they do not want a particular provision in the document, the delete object will omit the corresponding clause from the document. Delete objects are processed during the assembly phase.

**Loop** - Loop objects tell ProDoc to repeat sections of the master form if a particular condition exists. For example, a loop object may check to see how many sellers there are on a deed and then loop that many times creating one signature line for each seller.

**Special** - There are two objects, which do not contain instructions in a database. They are processed internally by ProDoc to perform a specific task. These objects are formatting objects and numbering objects. Formatting objects are used to tell ProDoc to use certain formatting characteristics such as line spacing and margin settings. Numbering objects are used for automatically numbering paragraphs in a finished document.

Most objects include logical instructions which ProDoc processes in order to determine what to do. For example, question objects often include logic, which determines whether to show a default answer and delete objects always include logical instructions, which determine whether or not to delete text.

**TOKENS**

When ProDoc is processing a master form, it is looking for tokens. You can think of tokens in the same manner as you think of simple merge codes you would use in WordPerfect or Word, except that they are much more flexible and powerful. When ProDoc finds a token, it looks for a matching object in the database file and then performs the instructions stored in that object. As mentioned above, the objects tell ProDoc when to ask a question, perform a calculation, delete or insert text or run a script. There are no special keys or techniques required to create a token. A token is simply a six-character word with a tilde (~) in front of it that you type into the form. A typical token would look like ~P1000V.

The first character in a token tells ProDoc what kind of object it represents. The most common types of tokens are:

- **A** - assembly questions (for example ~A1000V)
- **P** - merge questions (for example ~P1000V)
- **I** - assembly insert (for example ~I1000V)
- **M** - merge insert (for example ~M1000V)
- **C** - calculator assembly (for example ~C1000V)
- **D** - delete (for example ~D1000V)
- **E** - end delete (tells ProDoc where to stop deleting (for example ~E1000V)
- **L** - repeat a section of the master form (for example ~L1200V)
- **ELOOP** - end of the master form section to be repeated (~ELOOPV)
F - format instruction (for example ~FLNSPV is a line spacing instruction)
N - auto numbering instruction (for example ~NR001V)

To summarize, a token is simply a name that ProDoc uses to locate the corresponding object (instructions) in its database. The first character in the token tells ProDoc what kind of object it represents.

VOLUMES

ProDoc provides a simple method for organizing your master forms into a useful forms library. Forms are grouped together in sets called volumes. A volume normally contains forms for a specific area of law or subject, such as real estate, family law, corporations, etc. This method of grouping forms together by subject makes it much easier to find and maintain those forms. A ProDoc system can contain an unlimited number of volumes.

SCOPE

A large ProDoc system may contain many volumes and many thousands of objects. If all objects for all volumes were stored in a single database, it would become an extremely large database and it would be very difficult to manage. When the volume is installed, all of the forms as well as the object database files are copied into a separate directory just for that volume. An example of an object that applies only to a particular volume would be the name of the seller in a real estate transaction. This information is only relevant to the real estate volume - it would not be useful in an adoptions volume. Therefore, that object is stored in the real estate volume’s directory so that when ProDoc is assembling a deed it looks in the real estate directory for the database which contains the instructions. This type of object is said to have a volume scope.

Sometimes, however, there are certain questions or instructions, which will always be the same, no matter which volume you are assembling. An example of this would be a law firm’s name. It doesn’t matter whether you are preparing a will or a deed, the law firm’s name will be the same in each of those two volumes. This type of object is said to have a global scope. When ProDoc processes a global object, it looks in the main ProDoc directory for the database which contains the appropriate instructions. The benefit of this mechanism is that, when you are producing forms from more than one volume in a single case, you will only have to enter the law firm’s name one time instead of once for each volume you are using.

In addition to volume and global objects, you can also have supplemental objects. A supplemental object is volume specific but it is an object created by you. Your objects (questions) are stored in separate databases so that you do not have to worry about interfering with objects, which were shipped to you as part of a volume.

When ProDoc finds a token in a document, it looks at the last (sixth) character to determine what scope the object is and therefore which database to search for instructions. The three possibilities are V for volume objects, G for global objects and S for supplemental objects.

THE ASSEMBLY PHASE

The assembly phase is the initial processing stage where ProDoc processes some initial questions and then cuts and pastes text in the master form in order to create an interim form which contains all of the necessary text and clauses needed for the final document. The questions to be asked and other objects to be processed during this phase are contained in a database list, which is created for each master form. After this list of objects has been processed, ProDoc begins scanning the master form for additional objects to process.

Delete objects: When ProDoc finds a delete object, it checks to see how a question was answered or whether some other condition exists and it determines whether to begin deleting text from the form. If text is to be deleted, ProDoc begins cutting text out of the master form one character at a time. ProDoc does not stop deleting text until it finds the appropriate end delete token which stops the deletion process.

Processor objects: When ProDoc finds a processor object, it checks to see how a question was answered or whether some other condition exists and it determines whether to insert text into the form. For example, it
may check to see whether the Plaintiff is male or female and then insert the proper object (him or her) into the document.

Most questions asked in the assembly phase are assembly questions (~A), which are used to determine what clauses, paragraphs, nouns, etc. are to be inserted into or cut out of a document. An example of this would be a question asking the user to select any special provisions he wants in the document or asking what is the gender of the plaintiff. Occasionally, however, the author of a volume may include merge questions (~F) in the assembly phase question list. The most common reason for doing this is to get an answer that will be used in the text of a subsequent question. For example, What is the name of the Petitioner? ANSWER: Jane Doe, and then How many children does Jane Doe have?. It is sometimes helpful to include the person's name in the text of a question and the only way to have that name available is to ask for it with a preceding question.

In volumes, which are subscription items, assembly questions are always contained in a separate database list. Assembly question tokens (~Axxxx) however, can be contained at the very top of a master form. If ProDoc finds an assembly question token at the beginning of a master form, it will ask that question during the assembly phase. This feature allows you, the user, to use our assembly questions in your own forms even though you do not have access to the assembly phase question list.

Here's how this feature can be very useful. Suppose you are creating a supplemental form in which you would like to use one of our volume codes (say ~I0001V) which inserts either him or her in the document. You can use this code and, if you have already produced a regular document which processes an assembly question asking if the plaintiff is male or female (say ~A1000V), then the insert code will work just fine.

On the other hand, if you have not previously created a document, which asked this question, then your supplemental form won't be able to determine which pronoun to insert. To solve this problem, you can insert the assembly question token at the very beginning of your supplemental form. When ProDoc processes the form, it will check to see whether the question has already been answered and, if not, it will ask the question.

THE MERGE PHASE

When ProDoc reaches the merge phase, it has created an intermediate form which is the same as the final assembled document except that it lacks fill in the blank information. ProDoc then asks the fill-in-the-blank questions to get the missing information.

You can select whether you want to see the intermediate form during the merge phase. Normally, users elect to have the intermediate form displayed as ProDoc jumps to each merge question and stops for the user to fill in the blanks. Some users, however, prefer to have ProDoc not show the form and instead simply pop up the questions as the tokens are found.

After all of the blanks are filled in, the document is completed and ProDoc stores it on disk in the directory selected by you.

MISCELLANEOUS CONSIDERATIONS

For technical reasons, ProDoc has been designed to process ASCII, WordPerfect® 5.x or WordPerfect 6.x text files only. That means that if you edit a master form or create a supplemental form and save as a Microsoft Word file, ProDoc will have to convert it to a WordPerfect file before processing. ProDoc performs this conversion automatically without the user even knowing it has happened. This process works very reliably but it does take a few seconds each time the conversion is performed. Therefore, if speed is important to you, you would do better to save the master form or supplemental form as a WordPerfect 5.x or 6.x type file.

Formatting master forms (templates) - (~F tokens)

Formatting a master form to work consistently can be problematic. Consider a situation where you normally use 1" margins with line spacing of 1.5. In one form, you need to indent a section to 2" margins with line spacing set to 1. At the end of that indented section, you reset margins to 1" and
line spacing to 1.5.

When ProDoc begins processing a master form, it memorizes the formatting settings that are in effect at the beginning of the form. Whenever ProDoc encounters a formatting token, it inserts the original setting into the document at that location. Just think of this as a way to restore the original formatting settings, whatever they are. In the example above, instead of putting the 1" margin and 1.5 line spacing settings in the master form, type in ~FLNSPV~FLMARV~FRMARV to reset line spacing and margins to the original setting.

ProDoc’s formatting tokens are:

- FLNSPV - line spacing
- FLMARV - left margin
- FRMARV - right margin
- FTMARV - top margin
- FBMARV - bottom margin
- FFONT - font
- FJUST - justification

**Paragraph Numbering**

Volumes purchased from Thomson Reuters do not use WordPerfect’s or Microsoft Word’s auto numbering capabilities. This is because our forms are used with a wide variety of word processors and auto-numbering codes simply don’t convert between the different formats very reliably. Instead, ProDoc uses its own auto numbering mechanism. Our auto numbering tokens begin with ~N as follows:

- ~NRxxx - number with roman numerals (I, II, III, etc)
- ~NAxxx - number with arabic numbers (1, 2, 3 etc.)
- ~NCxxx - use capital letters (A, B, C, etc.)
- ~NLxxx - use lower case letters (a, b, c)

**Dimensioned Questions**

In early versions of ProDoc, we couldn’t simply ask, “How many children are there?” and then loop through and ask for the names for however many children were indicated. Instead, what we had to do is give the user a choice between a limited range such as 0, 1, 2, 3 or 4 children. We would then create separate objects for child 1, child 2, child 3 and child 4. Beginning with version 2.0, however, we now have what are called dimensioned objects, which can hold multiple answers. (For you programmers, these are arrays.) In the above example, we could use a single dimensioned object to hold the names of all the children. The benefit to this method is that we no longer have to limit the number of children to a preset maximum such as 4.

To use a dimensioned object, it must be placed in a loop structure. Loop structures begin with an L token, end with an ELOOP token, and may contain text and tokens in between. The L token is tied to an assembly phase token that indicates how many times the loop should repeat. For example, if the user says there are 5 children, then the loop would repeat five times, asking for the names of the first child, second child, third child, fourth child and fifth child.

A loop structure like the one below could be used to list the names and birth dates of several children in a document. In this example P1508V and P1514V are dimensioned objects that ask for and store the names and birth dates, respectively, of multiple children. L1500V is tied to an assembly phase token that asks how many children there are. Generally the assembly phase token is a token with the same number as the L token. In this case that would be A1500V.
The questions asked in this example would be as follows. First would be the A1500V question, which might be "Number of children affected by the suit." Assume the user answers "2." Next would be "Name of the 1st child:" (assume the answer is "Ann"), then "Birth date of Ann:" (assume the answer is "January 1, 1991"), then "Name of 2nd child:" (assume the answer is "Bob"), then "Birth date of Bob:" (assume the answer is "February 2, 1992"). The text appearing in the assembled form for the loop structure for these answers would be as follows.

Name of child: Ann
Date of Birth: January 1, 1991
Name of the child: Bob
Date of Birth: February 2, 1992

In the bulk of the Family Law forms, only one petitioner is possible, but a dimensioned object, P1208G, is used to hold the name of the petitioner. If ~P1208G appears in a form, it must be in a loop structure even though there will be only one petitioner. There are no exceptions to the rule that a token in a form for a dimensioned object must be in a loop structure. The L token for the number of petitioners is L1200G. So, to insert the petitioner's name in a form using P1208G, use the loop structure ~L1200G~P1208G~EL00PG rather than ~P1208G.

SAMPLE ASSEMBLY SESSION

Assembly Questions

The first step in an assembly session is to ask a series of questions and perform calculations necessary to do the initial cutting and pasting which creates the form. The tokens for these questions and calculations are contained in a list, which is stored in a database file. A sample list is reproduced below:

C0001G  - calculator that transfers client’s name from Client/Case Manager
P9005G  - Question: County where the action is pending. (Some counties have local requirements)
A0100V  - Question: Describe your client:
A1200G  - Question: How many petitioners are there:
L1200G  - loop once for each petitioner
CPETIV  - calculator that transfers client data from Client/Case Manager
P1208G  - Question: Petitioner's full name:
P1240G  - Question: Petitioner's birth date:
A8605V  - Question: Describe the Petitioner:
ELOOPG  - end of loop
A1300G  - Question: How many respondents are there:
L1300G  - loop once for each respondent
CRESPV  - calculator which transfers client data from the contact manager
P1308G  - Question: Respondent’s full name:
P1340G  - Question: Respondent’s date of birth:
A8610V  - Question: Describe the respondent:
ELOOPG  - end of loop
Appendices 140

A1500V - Question: Number of children affected by this suit:
L1500V - loop once for each child
P1508V - Question: Name of the [1st, 2nd, 3rd...] child:
P1514V - Question: Birth date of the child:
ELOOPV - end of loop
A2000V - Question: Select a domicile provision:
A2005V - Question: Select type of Service for Original Petition:

This is only a partial reproduction of the assembly question list for the Original Petition for Divorce. There are many more items in the complete list.

ProDoc works through this list and processes the tokens just as if they were found in the master form. Notice question A1200G, which asks how many petitioners there are. This question has logic attached to which automatically assigns "1" as the answer when you are creating divorce documents because there can only be one petitioner in a divorce. The question must be in the list, however, because the answer to this question determines how many times to process the following loop.

Assembling the Form

After the assembly phase question list has been processed, ProDoc begins processing the master form. This task involves scanning the form looking for assembly phase tokens. As each token is found, it is processed, which causes ProDoc to cut or paste text into the form. When this cutting and pasting is completed, ProDoc has created the form which contains all of the pronouns, paragraph numbers, clauses, paragraphs and provisions which are needed for the completed document. This intermediate form still contains fill-in-the-blank tokens, which will be processed, in order to fill in the blanks during the following merge phase. A sample page from a master form before the assembly phase and one from the form after the assembly phase is reproduced on the next pages:

This master form is filled with assembly and merge phase tokens:

Original Petition for Divorce

1. Parties

This suit is brought by JOHN DOE, Petitioner, who is ~P1241G years of age and resides at ~P1215G, ~P1218G, ~P1222G. JANE DOE, Respondent, is ~P1341G years of age and resides at ~P1315G, ~P1318G, ~P1322G.

2. Domicile

Petitioner has been a domiciliary of Texas for the preceding six-month period and a resident of this county for the preceding ninety-day period.

3. Service

Process should be served on Respondent at ~P1315G, ~P1318G, ~P1322G.

4. Protective Order Statement

No protective order under chapter 71 or section 3.581 of the Texas Family Code is in effect, and no application for a protective order is pending with regard to the parties to this suit.

5. Dates of Marriage and Separation

The parties were married on or about ~P2038V and ceased to live together as husband and wife on or about ~P2040V.

6. Grounds for Divorce

The marriage has become insupportable because of discord or conflict of personalities between Petitioner and Respondent that destroys the legitimate ends of the marriage relationship and prevents any reasonable expectation of reconciliation.

7. Children of the Marriage

There is no child born or adopted of this marriage, and none is expected.

8. Division of Community Property

Petitioner believes Petitioner and Respondent will enter into an agreement for the division of their estate. If such an agreement is made, Petitioner requests the Court to approve the agreement and divide their estate in a manner consistent with the agreement. If such an agreement is not made, Petitioner requests the Court to divide their estate in a manner that the Court deems just and right, as provided by law.
9. Statement on Alternative Dispute Resolution
Petitioner has signed a statement on alternative dispute resolution, which is attached as Exhibit ~P2072V.

10. Prayer
Petitioner prays that citation and notice issue as required by law and that the Court grant a divorce and all other relief requested in this petition.

An example follows of how this interim form appears during the merge phase:

ANALYSIS OF A MASTER FORM
The following is a reprint of the first page of a master form for a Notice of Hearing For Temporary Orders.

~I0001V

Notice of Hearing for Temporary Orders ~FFONTV

~FLNSPV ~L1300GNotice is given to Respondent, ~P1308G~ELOOPG, and Respondent is ORDERED to appear in person before this Court in the courthouse at ~P2450V, Texas, on at
The child is the subject of this suit.

One of the purposes of the hearing is to determine whether the temporary injunction prayed for should be granted to enjoin Respondent from the following:

- Communicating with Petitioner in person, by telephone, or in writing in vulgar, profane, obscene, or indecent language or in a coarse or offensive manner.
- Threatening Petitioner in person, by telephone, or in writing to take unlawful action against any person.
- Placing one or more telephone calls, anonymously, at any unreasonable hour, in an offensive and repetitious manner, or without a legitimate purpose of communication.
- Causing bodily injury to Petitioner or to a child of either party.
- Threatening Petitioner or a child of either party with imminent bodily injury.
- Destroying, removing, concealing, encumbering, transferring, or otherwise harming or reducing the...

Here's what the highlighted objects mean:

~I0001V - this is an assembly insert code which inserts the appropriate caption, depending on how many children are in the case (~A1500V);

~FLNSPV - the caption is single-spaced and then the form resets line spacing to “2”. If the user set line spacing to something different in the format option in ProDoc, then this code will override the double spacing with whatever the user set;

~L1300G - this global loop loops one time for each Respondent. It has logic which presets the count to “1” when the user is preparing Family Law documents;

~P1308G - this global merge question asks for the name of each Respondent. Since the loop it is in (L1300G) is preset to “1” for family law, the user will only be asked for the name of one Respondent;

~ELOOPG - this end loop token signifies the end of the loop for the respondent’s name;

~D1500V - this delete object deletes the following paragraph if there are no children in the case. (~A1500V);

~I2004V - this assembly insert code inserts “ren” if there are more than one child in the case;

~I2003V - this assembly insert code inserts “are” or “is”, depending on how many children are in the case;

~M1504V - this merge insert object inserts the name(s) of the child(ren) into the document in a formatted list. A formatted list means, if there are more than one child, there is a comma between each name and an “and” before the last name;

~E1500V - this end delete token marks the point to quit deleting if there are no children;
Appendix C - Timeslips Extension

Overview

The Timeslips extension gives you the ability to bill your clients by generating “slips” for each document created in ProDoc. Generating a slip takes place after document assembly in ProDoc and before the document is opened in the word processor.

You must install Timeslips version 9.1 (or newer) in order to implement this extension.

ProDoc’s database files must first be synchronized with Timeslips’ database files. Synchronization ensures that changes made in one program’s database are replicated in the other program’s database. There are many ways in which the synchronizer can be used:

- If you are a new Timeslips user and a current ProDoc user with Client and Case information, the Synchronizer will automatically export all the records into Timeslips. Conversely, if you are a new ProDoc user and a current Timeslips user, the Synchronizer will export all clients and projects into ProDoc.
- You can set the Timeslips extension to keep both databases synchronized automatically or manually.
- You can individually select, in either Timeslips or ProDoc, which records to synchronize.
- After the first step is completed, you can set the Synchronizer to display only new records which have not been previously synchronized. This gives you the opportunity to decide later whether or not you want to synchronize the records.

It is important that you read this appendix thoroughly before proceeding to integrate ProDoc and Timeslips.

Step 1: Setting up ProDoc before synchronization

There are some specific requirements in the synchronization with Timeslips, which you will need to satisfy before synchronizing.

1. From the Main Menu, click Customize > Options, then click the Timeslips link on the left side of the options and settings window. See the Timeslips Settings section of this manual for a view of the screen.
   a. Select the box labeled Enable the Timeslips Connection.
   b. If desired, click the On radio button to have the synchronizer start each time you run ProDoc. If you do this, ProDoc will attempt to connect with Timeslips in subsequent program starts. If you select Off, you will need to use the Tools menu to manually start the synchronization process.
   c. You will now have a new menu option under the Tools menu, titled Timeslips, which branches to Timeslips setup, Timeslips synchronizer, and Timeslips task manager. You will use these menu items while managing ProDoc and Timeslips interactions.
2. We recommend that you assign Client IDs and Case IDs in order to simplify the synchronization.
   a. First, set up ProDoc to use unique Client and Case IDs. From the Main Menu, click Customize > Options, then click the Clients & Cases link at the left of the window. Ensure both boxes on
this window are selected. See the Client & Case Settings section of this manual for help with this process. Each client record and project record in Timeslips contains a field called Nickname1. These fields are required and must contain a unique value. The ProDoc “Client ID” field and “Case ID” fields are the fields which must match the “NickName1” fields in Timeslips.

b. Next, if you haven’t already assigned IDs to your cases and clients, use the Client & Case Manager to enter Client IDs and Case IDs for each client and case in your database.

c. Exit ProDoc and proceed to Step 2.

Why use Client and Case IDs? If you are using Client IDs and Case IDs in ProDoc, then the synchronizer will use those fields to fill in the Timeslips NickName1. If these fields are vacant in ProDoc, the synchronizer will attempt to “intelligently” fill in those fields in BOTH programs using your client's initials.

You should not rely too much on this convention, as Timeslips does not allow for duplicated NickName1 and you may very well have another client with identical initials. For this reason, if you are not using Client IDs and/or Case IDs in ProDoc, you should be sure to set up auto formatting for Nickname1 in Timeslips and that scheme will then be used when you synchronize clients. Better yet, take the time to go into the Client & Case Manager and assign client and case IDs to everyone. Timeslips limits its Nickname1 field to 30 characters or less. When setting up Client IDs and Case IDs in ProDoc, make sure to keep them under 30 characters long when combined.

If, after synchronization, you find ProDoc records marked as not synchronized, chances are there is another record already in Timeslips with the same Nickname1.

NOTE: If you have the same case code for two different clients, it will work with Timeslips provided the client nickname is different. For example, if you use 1999/3/16-Divorce to refer to Smith’s divorce and 1999/3/16-Divorce to refer to John’s divorce, it will be inserted in Timeslips as Smith!1999/3/16 and John!1999/3/16.

Once synchronization is completed, updating names, addresses and related information in one program will update the same information in other programs’ data files. Initially, these options are set to automatically synchronize.

Step 2: Setting up Timeslips before synchronization

To work properly with ProDoc, some methods that are allowed in Timeslips should be avoided to keep the two databases as compatible as possible. This appendix details those specific points that you should check. If you are an existing Timeslips user, you may need to make some changes in your database to avoid more work once both products are synchronized.

Timeslips offers three billing system possibilities: per Client, per User, and per Task. ProDoc works only with the “per Task” billing system on a flat rate. If you have currently defined a billing rate for your Clients and Timekeepers, you can still use these for all jobs not related to ProDoc. However, in order to bill from ProDoc, you will need to define tasks that will be used by ProDoc to generate slips.

New Timeslips user

If you have been using ProDoc and recently installed Timeslips, carefully read your Timeslips software manual before attempting to initiate the synchronization process. In particular it is important that you understand the concept of “Templates” and “New Name” defaults as defined in the Timeslips Version 9.1 or later manual. These allow you to define options for billing your clients and other important settings.

When ProDoc exports clients into Timeslips, it uses the appropriate template if one exists. If there is no template, then the imported client will reflect the default settings in Timeslips. Clearly it would be better to have new Timeslips clients set up the way you want them rather than relying on the Timeslips default
settings. Likewise, if your firm uses a specific coding scheme for client id’s, you will want to set this up in Timeslips before you import clients from ProDoc.

**NOTE:** See Nickname Formatting in your Timeslips software manual for more information.

You should familiarize yourself with Timeslips and then define how you want to bill your clients. To save time, use Timeslips templates whenever possible. **You must perform the following two steps before using Timeslips and ProDoc together:**

1. **Define a “project” separator.** “Project” is the Timeslips term that ProDoc will refer to as “Cases”. Access this option from the Timeslips Setup menu. Click the **General** item and then click on the **Nicknames** tab. A window similar to Figure C-1 appears.

2. **Define a “Default” Task** to be used by ProDoc when no Task has been assigned to a form. You may want to define more tasks, but the “Default” is needed to begin generating slips from ProDoc. You define tasks by going to Timeslips Navigator, clicking **Tasks** and then selecting **New Task**.

During initial synchronization, you will select the default task that you've set up in Timeslips and enter a default charge for the task. This is needed in the beginning, and it can be changed while generating slips.

**Existing Timeslips Users**

If you have been using Timeslips and recently installed ProDoc, there are a few items that you need to consider in Timeslips. In particular:

- Timeslips allows you to combine both client and project information into a single master record (i.e., Jones/Divorce),
- Or, you can have one master record (i.e., Jones), which stores client information, and separate records for each project (i.e., Divorce or Bankruptcy, etc.)

ProDoc can only synchronize records when there is a separate master record for each client with separate records for each project (Option B).

Therefore, if you have combined client and project information into a single master record, you will have to modify your database before attempting to synchronize the databases. To modify your database, you must add a record to store the client alone, check the master checkbox for this record and then uncheck the master mark for the client/project record. This is the only way to ensure that your Timeslips records will be properly synchronized with ProDoc.

ProDoc assumes that the “master” record stores only the client information and has no project separator character in the NickName1 field. The “child” records (cases) are the only ones to have this character. Double check your database to ensure that is correct if you want to have a smooth synchronization process.

You will also want to check that EVERY “client/case” record has a full name in your database before exporting your records to ProDoc and synchronizing. If this field is blank, the record will NOT be imported in ProDoc. If necessary, you can correct this later, although these Timeslips records will be marked as not synchronized.
Step 3: Start ProDoc and run the Timeslips Synchronizer Settings Wizard

Setup options for synchronizing the databases are primarily established from within ProDoc. These options include either automatic or manual processing of data, frequency, and timing. You can run the synchronizer settings wizard from the Main Menu by clicking **Tools > Timeslips > Timeslips setup**. This action will initiate five wizard settings windows similar to Figures C-2 through C-6.

**Important Note: If this is the first time you are running the Synchronization Wizard, the default settings should normally be used.**

The first settings window informs you that several questions need to be asked about how you want ProDoc and Timeslips to work together.

This window sets the stage for the four remaining settings windows.

Click **Next**.

The first option here applies only to those who already have databases in both ProDoc and Timeslips. It lets you check the status of a record before it is synchronized.

The second option is to add records in ProDoc. Be aware that if you answer **No** to both questions, and press the **Begin** button on the synchronizer window, you will have to synchronize all your records by dragging and dropping each of them. For now, if you are synchronizing for the first time, accept the default settings and click **Next** to continue.

For the first choice, if you are importing from ProDoc to Timeslips and answer **No** here, nothing will happen when you press the **Begin** button. You will have to drag and drop each record.

The two other choices affect daily usage after initial synchronization. Answering **No** here will disable the automatic processing, and you will need to use the synchronizer. Again, when initially synchronizing, accept the default selections and click **Next**.
This window will modify how ProDoc handles changes that are made in Timeslips. A computer running ProDoc can be set to automatically check for changes made in Timeslips every few minutes or once each time you start ProDoc.

In a networked environment, it would be most efficient to have only one workstation checking for changes in the Timeslips database. Since these settings are per workstation, we recommend that this checkbox only be set “ON” at one workstation on the network. The workstation which checks for changes should be one which is used every day. If you uncheck this box, choices for the timer settings will disappear.

If you uncheck Timer ON?, changes made to your Client/Cases database in Timeslips would only be checked when you start ProDoc. This choice would be very logical if you are on a stand-alone computer and you are the one making the changes.

If the timer is on, you can set the frequency that checks are to be made. By default, it is 1 minute, but you may prefer to have ProDoc checking for changes in Timeslips less frequently. To increase the time between checks, just increase the value in the timer delay field.

Moreover, if the timer is set to ON and you have other applications open such as your word processor, every time the check is made screen focus will unexpectedly return to ProDoc. If this proves bothersome for you, you may want to not check it ON.

In Timeslips, you can have multiple databases. Most law offices will probably not use this feature and therefore do not want to specify which Timeslips database to use every time they start ProDoc. If you check the box labeled Dialog to select Timeslips database ON?, you will be presented with a window each time you start ProDoc which will ask which Timeslips database you want to use. The default is unchecked. You should leave it unchecked if you only have one database set up in Timeslips. It is logical to assume that you want to use the same database as you used the previous time.

The last choice concerns slips generation after you generate documents for a case. By default, it is set to always generate a slip. You can change the default setting to be asked each time or you can set it to never generate a slip. Keep in mind that even if you set this to always generate a slip, you will still always be able to cancel or edit the slip before ProDoc sends it to Timeslips. Again, accept the default settings and click Next if you are synchronizing for the first time.
The last settings window allows you to select which Timeslips task will be your “default” task. All documents generated from ProDoc without an “assigned” task will generate a Slip using this default task. In order to select a default task here, your Timeslips installation must have the task set up and active.

ProDoc will use the value you specify here instead of any rate you place on the default task when setting it up in Timeslips.

Regardless of any default values you enter here, you will be able to cancel or edit any slip before ProDoc sends it to Timeslips. If you are synchronizing for the first time, accept the default settings and click Finish.

**Step 4: Start the Synchronization process**

Depending on your particular circumstances, one of the following scenarios probably applies to you:

- If you are already a Timeslips user and just acquired ProDoc to assemble your legal documents, read the section below called "From Timeslips to ProDoc".
- If you are a ProDoc user and just installed Timeslips, you will want to read about "From ProDoc to Timeslips".
- If you were already using both products, but with a previous version where the synchronization between the two was not available, read about "Both Together".

**NOTE:** This distinction is valid only for your first use. Once both databases are synchronized, the process will be the same, whatever "history" you have.

After you have complied with the prerequisites discussed above, ProDoc and Timeslips will be properly configured. You can now begin the synchronization process. To start the synchronization process, open ProDoc and click **Tools > Timeslips >Timeslips synchronizer**. A window similar to Figure C-7 will appear.

**NOTE:** If you don’t see this option in your Tools menu, there is a problem with your Timeslips installation, and ProDoc cannot find it.
The Synchronizer window will be different depending on which application is the new one for you.

**NOTE:** Before the synchronization, when you run ProDoc, you may see an error message stating “There are no records to Process”. This is because each time you run ProDoc, it will build a table with matching records in ProDoc and Timeslips.

**From ProDoc to Timeslips**

As a new Timeslips user running the synchronizer for the first time, you should see something like the window shown in Figure C-7.

The list on the left side is your ProDoc contact file, and linked to each client are the case(s) for that client. This type of display is called a tree. To see the cases for each client, just click the + sign to expand that branch of the tree.

The blue cross icon means that this record is not yet synchronized.

The buttons in the center of the window are usually not used in initial synchronization. These are used in later sessions. Click on the Help icon in the lower left portion of the window to see full details on these buttons.

To launch the export/synchronization process itself, click the **Begin** button in the lower right hand corner of the window. While the synchronization is in process, the name of your client/case being synchronized is displayed on the bottom of the screen. Be patient as this process could be quite lengthy depending on your computer’s performance and how many clients/cases you have in the database.

After synchronization is completed and both databases are fully synchronized, all records should now have a green checkmark icon meaning that the record is synchronized.
To check the current state of synchronization, open Timeslips and click **File > Connected Databases**. select the menu item Special from the main screen. Then, click on Connected Databases from the drop down window as shown in Figure C-8.

**NOTE:** You will notice that ProDoc has been added as the last item on this menu, which allows you to run ProDoc from Timeslips.

![Figure C-8, Selecting Timeslips Connected Databases](image)

You should then see something like the window in Figure C-9, which confirms that both applications are properly linked together.

You can click on the **View Records** button to see a list of all your Timeslips clients/cases records, with a **Yes** displayed in the Connected column. If you are not sure about synchronization for one particular record, this is the place to look.

![Figure C-9, Connected Databases Window](image)

### From Timeslips to ProDoc

If you are a new ProDoc user, the only real difference is that the empty list will be on the left side in Figure C-7 with your Clients/Cases relation tree on the right side. Click on the “begin” button, and watch your records being converted/synchronized into ProDoc.

### Both together

If you were using both applications before the synchronization was available, you should refer to BOTH “existing” Timeslips user above, and “existing” ProDoc user above, as the synchronization process will attempt to match records from ProDoc client IDs and case IDs with Timeslips NickName1. If those fields for clients and cases are different in each program, the process may create two entries in each program for each client and each case.

**Note:** ProDoc exports phone numbers to Timeslips using a predefined scheme. On the other hand, if a phone number change is detected in Timeslips, there is no reliable way to determine which phone number changed or if a new number was added. The synchronizer process will systematically add the numbers for the contact into ProDoc using the order they are stored in Timeslips. So, if you wind up with several “home” numbers in ProDoc, it may be because you changed a phone number in Timeslips and the number was then incorrectly added to ProDoc during synchronization. In short, once the two databases are synchronized, it is more efficient to add clients and cases or make changes in ProDoc rather than in Timeslips.

### Daily ProDoc use with synchronization
Each time you run ProDoc, you will briefly see a small information window telling you that ProDoc is connecting to Timeslips. ProDoc is reading the synchronization tables to store them in memory so that changes made in one or the other database can be replicated in the matching record.

Should you want to change the default settings used in the initial synchronization, you can do so by selecting Tools > Timeslips > Timeslips setup from the ProDoc menu. This will bring up the same series of five windows previously described. Use this procedure to customize the way subsequent synchronizations will work. You should become familiar with the options described for each of the five windows before beginning to work with both applications linked together.

**Add or make changes to clients and cases in ProDoc**

Now that the synchronization is operational and the settings are acceptable, you will want to know what happens if you change, add or delete a client and/or a case in ProDoc.

If you have not changed the settings, the routine synchronization with Timeslips will be completely transparent. Therefore, when you select a client in ProDoc and change the name, address, or even the Client-ID and click OK, you will find these changes reflected to the same client in Timeslips. You can do the same for a case, or add a new case.

If you have changed your settings so that the synchronization is not automatic, you will not see the changes in Timeslips immediately. In this case, you will need to run the Synchronizer and use it to synchronize any changed records by using the buttons in the center of the window or with drag and drop. **Important note:** If you delete a client and/or a case in ProDoc, these will NOT be deleted in Timeslips.

**Add or make changes to clients and cases in Timeslips**

When you add or change a Client and/or a case in Timeslips, that change will be reflected differently in ProDoc depending on your settings. If Check Changes ON is not checked, you have disabled ProDoc's mechanism for automatically detecting changes made in Timeslips.

If you have disabled automatic checking, the only way to see if changes have been made and to import them is to run the Synchronizer from ProDoc's Tools menu. Figure C-10 shows some Timeslips records listed in red color that were added to Timeslips and have not yet been synchronized.

If you left your settings to have the synchronizer operate automatically, you will see a window like Figure C-11 each time you run ProDoc. If you elected in setup to check every few minutes, you will see it every time an automatic check finds records which need to be synchronized.
When the synchronizer adds or changes a client in ProDoc, a window like the one in Figure C-11 will pop up to let you know about the change so that you are not surprised to discover new names in your client list.

Just click the Close button. The process is the same for adding new clients or changing existing client information.

Figure C-11, Records Changed in Timeslips

Defining tasks and assigning fees to tasks

The Task Manager lets you assign a pre-existing Timeslips task to either an individual ProDoc master form or to a form set. You cannot create Timeslips tasks in ProDoc. You can only assign them from within ProDoc. If you do not assign a task, ProDoc will use the pre-defined “Default” task. Assigning fees to a predefined task is done only in Timeslips. Modifying fees for a completed document can be done in ProDoc when you are generating the time slip. The tasks themselves are created in Timeslips. If you want to use a task for generating slips in ProDoc, you will need to “assign” the task to forms or form sets in ProDoc. You decide which rules to follow when you bill your clients for the work done in ProDoc.

You should initially create a task in Timeslips intended to be your “default” task. That means that anytime you generate a document in ProDoc for a case and you have not assigned a specific task for that form or form set, ProDoc will use information from the default task. You can always change or cancel this Slip before it is sent to Timeslips. Creating this default task is the best way to get accustomed to this feature. In due time, you will develop your own guidelines for which forms or form sets you want to create individual tasks for. When you define a task in Timeslips, it should be set as billable and the rate type should be Flat rather than hourly.

Figure C-12 shows the Task Manager, which is used to assign Timeslips tasks to specific forms or form sets. You access the Task Manager Wizard by clicking Tools > Timeslips > Timeslips task manager from the ProDoc menu.

Figure C-12, Task Manager Window

When you generate a form set which is covered by a Timeslips task, ProDoc will generate only one slip for
that task instead of one slip for each document. It is a very simple operation to assign a form or form set to a task. First, select the desired task in the upper left list box. Then select the form on the right (after selecting the volume you want), and “drag” it (by holding your left mouse button down while you move the mouse cursor) to the list of assigned forms on the lower left side. Then drop it there, by releasing your mouse button. When you see the mouse cursor changing to a down arrow, it means that your “drop” will be valid.

The first task shown above has no form assigned to it since it is the task which will always be used by default. If you don’t assign forms to tasks here, you can still assign them on the fly after you generate the documents in ProDoc. After you find yourself assigning the same task and form over and over again as you generate slips in ProDoc, you will eventually see that it would be more efficient to come to this Task Manager and assign the task permanently.

Conversely, you might also want to create a series of tasks in Timeslips that are keyed to a dollar value such as "created a $25 ProDoc document". You would also have tasks for documents valued at $50, $75, etc. Then, you can assign them to each applicable form by dragging and dropping the form from the right hand pane to the bottom left pane in the task manager.

Generating Slips

Finally, you are ready to generate slips in ProDoc as you assemble documents for a case.

Generating slips is a seamless process in ProDoc. If you select a client and case at the beginning of the assembly session and that case is properly synchronized, ProDoc will generate a slip. When the slip is presented at the end of an assembly session, you can edit any significant information, like the “timekeeper”, the dollar value, etc., before “sending” the slip to Timeslips.

You will still be able to edit the slip before billing the client in Timeslips.

Your settings on Window 4 of the setup wizard will affect how slips are generated. You may select to NOT generate slips, which could be useful if you are still making tests and you do not want your actual database to be affected by these tests. You can also select NOT if you have Timeslips but you don’t yet want to use it from within ProDoc.

In any other case, you should see a window like the one in Figure C-13 when ProDoc is preparing to generate slips.

In this example, a document has just been generated for which no specific task has been assigned. As a result, the standard default task is used. You see in the upper left list box the slips to be generated, with the name of the task used, as well as the default value, and billing status.

Figure C-13, Prepare Slips to be Generated Window

In the lower left list box you see the title and filename of the document included in the slip, which is highlighted. Multiple documents would be listed if the slip were for a form set. In the text box on the lower right you will see the Slip description. By default, ProDoc will use a list of the documents generated as the description of the task.

If you click on the Edit button, you will see a window like the one shown in Figure C-14.
Figure C-14 illustrates what you see when you are in edit mode for the highlighted slip. The two list boxes on the left are disabled (grayed out), but you can edit all the fields on the right side. In this example, we have changed the value for this slip from $50.00 to $55.25.

Clicking on the OK button will save your changes.

You may see a Consolidate All button. This command allows you to create a single slip from all listed slips so that you will have only one slip for all of the generated documents. All of the listed tasks will be consolidated into the task, which is highlighted when you click the Consolidate All button.

If you have many different documents and different kind of tasks, you may wish to consolidate your slips, but not all together. To achieve this, simply drag the desired task and drop it on the “target” task. Doing that allows you to individually consolidate your slips rather than consolidating all of them. In the example on the previous page, either method would yield the same result.

Figure C-15 shows what you get after saving your changes.

Now, clicking the Generate button will close the window and send the data to Timeslips.

NOTE: You may want to initially utilize the foregoing procedure to simply edit the dollar value of the default task for each document you generate.

Appendix D - Creating Supplemental Forms

Purpose

ProDoc contains a considerable number of volumes with thousands of professionally developed master forms. However, you may wish to add your own forms to ProDoc’s volumes. Using ProDoc’s supplemental forms feature, you can create documents to assemble in ProDoc from documents you are using in your practice. This section describes the process of creating supplemental forms.

NOTE: Appendix B of this manual contains useful technical information regarding the process ProDoc uses to assemble documents. Also, feel free to call 800-759-5418 for assistance. Just ask to speak with a representative from our Technical Support department.

Process
Follow these steps when creating supplemental forms. First, create or open a document in your word processor. Next, print the document and highlight those items that represent variable information. In ProDoc, create tokens to represent the variable information needed in your document. Return to your word processor and insert the tokens into your document. Save the document to the correct ProDoc volume. Associate the document to the ProDoc database and test the form by assembling the document.

**NOTE:** The steps in creating supplemental forms do not have to be performed in the order below.

**Step 1 - Create or open the Supplemental form (template) in your word processor**

The first step in creating your own supplemental forms is to draft or open a form in your word processor. You can draft your form entirely from scratch; base it on a previously prepared document; or use an assembled ProDoc document.

**Step 2 - Identify Items Of Variable Information**

Print a copy of the form to determine the variable information on the form. Highlight or draw a line through each item of information that could be considered variable. Variable information is information such as dates, names, addresses, etc. asked for in the same manner each time a document is assembled (e.g. What is today's date?, What is the client’s name?, etc.), but answered differently for each client and case (e.g. June 13, 2000, or John Doe).

For example, let's look at a sample letter to a client confirming his appointment. See Figure 1. The variable information needed appears in bold UPPER-CASE letters at the locations in the letter where each answer should be inserted.

**Figure 1 - Sample Letter**

<table>
<thead>
<tr>
<th>DATE</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLIENT’S NAME INSIDE</td>
</tr>
<tr>
<td>CLIENT’S STREET ADDRESS</td>
</tr>
<tr>
<td>CLIENT’S CITY, STATE ZIP CODE</td>
</tr>
</tbody>
</table>

Re: TYPE OF CASE

Dear SALUTATION FOR CLIENT:
Thank you for contacting our office and giving us the opportunity to review your TYPE OF CASE claim.
This letter shall serve to confirm your appointment with attorney NAME OF ATTORNEY, on DATE OF APPOINTMENT at TIME OF APPOINTMENT. If unable to attend this appointment, please contact me immediately at the below listed telephone number.
In order for me to review your claim thoroughly, please bring the following information, if available, with you to your appointment:

**INFORMATION TO BRING TO THE APPOINTMENT**
If you have any questions regarding this matter, please do not hesitate to contact our office. Your cooperation in this matter is appreciated.

Sincerely,

NAME OF PERSON SIGNING LETTER
Step 3 - Assign tokens to items of variable information

You must assign a token and an appropriate question to each item of variable information in your supplemental form. Usually you will have to create your own tokens ("supplemental tokens"). For some items of variable information in your supplemental form, there might be a Global or Volume token in the database. If so, you may use the Global or Volume token instead of creating a supplemental token.

Supplemental Tokens

For the sample letter above, supplemental tokens and questions might be assigned as follows:

<table>
<thead>
<tr>
<th>ITEM</th>
<th>TOKEN #</th>
<th>QUESTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>DATE</td>
<td>~P0001S</td>
<td>Date Letter is being written?</td>
</tr>
<tr>
<td>CLIENT'S NAME INSIDE</td>
<td>~P0002S</td>
<td>Client’s Name for inside address?</td>
</tr>
<tr>
<td>CLIENT'S STREET ADDRESS</td>
<td>~P0003S</td>
<td>Client's Street Address?</td>
</tr>
<tr>
<td>CLIENT'S CITY</td>
<td>~P0004S</td>
<td>Client's City of Residence?</td>
</tr>
<tr>
<td>CLIENT'S STATE</td>
<td>~P0005S</td>
<td>Client’s State of Residence?</td>
</tr>
<tr>
<td>CLIENT'S ZIP CODE</td>
<td>~P0006S</td>
<td>Client’s Zip Code?</td>
</tr>
<tr>
<td>TYPE OF CASE</td>
<td>~P0007S</td>
<td>Type of Case?</td>
</tr>
<tr>
<td>SALUTATION FOR CLIENT</td>
<td>~P0008S</td>
<td>Salutation for Client?</td>
</tr>
<tr>
<td>NAME OF ATTORNEY</td>
<td>~P0009S</td>
<td>Name of Attorney meeting with Client?</td>
</tr>
<tr>
<td>DATE OF APPOINTMENT</td>
<td>~P0010S</td>
<td>Date of Client's Appointment?</td>
</tr>
<tr>
<td>TIME OF APPOINTMENT</td>
<td>~P0011S</td>

</tr>
</tbody>
</table>

**NOTE:** If you have created other supplemental forms for the volume and an item of variable information appears in both the current form and one of the previous forms, you may assign the same supplemental token to the item in the current form as you assigned to it in the previous form. To see a list of all existing supplemental tokens for a specific volume, click **Print > Question Lists > Supplemental Questions**, choose the desired volume and print the report.

Global and Volume Tokens

If a Global or Volume token exists for an item of variable information in your supplemental form then in most cases you can use the Global or Volume token in your supplemental form. Doing so saves you from having to create a supplemental token for the item of variable information. Also, when you assemble documents from both your supplemental form and another form that contains the Global or Volume token in the same assembly session, only the question for the Global or Volume token will be asked. If you used a supplemental token then the questions for both tokens, which would be essentially the same question, would both be asked.

To print or view a list of Global or Volume tokens, select **Print > Question Lists > Global Questions** or **Print > Question Lists > Volume Questions**. For volume tokens you must then select the volume to which you are adding the supplemental form. Volume tokens can be used only for supplemental forms saved in that volume as discussed in Method 1 below. Global tokens can be used in forms in all volumes, including a volume you create as discussed in Method 2 below. You are more likely to use Global tokens, which correspond to frequently used items such as Name of your Law Firm, Law Firm Address and Name of Primary Attorney. In our example we could assign the Global token ~P0190G ("Name of client's primary attorney;") to the NAME OF ATTORNEY item instead of ~P0009S.
Exercise caution when inserting Global and Volume tokens in supplemental forms as some can yield unexpected results. Call Technical Support for assistance if necessary.

Some of the more commonly used Global tokens include:

<table>
<thead>
<tr>
<th>TOKEN</th>
<th>QUESTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>~P0001G</td>
<td>What is the name of your law firm?</td>
</tr>
<tr>
<td>~P0002G</td>
<td>What is the law firm’s address (block style)?</td>
</tr>
<tr>
<td>~P0003G</td>
<td>What is the law firm’s address (line style)?</td>
</tr>
<tr>
<td>~P0007G</td>
<td>What is the law firm’s phone number?</td>
</tr>
<tr>
<td>~P0020G</td>
<td>What is the law firm’s county?</td>
</tr>
<tr>
<td>~P0108G</td>
<td>What is your first client’s full name?</td>
</tr>
<tr>
<td>~P0127G</td>
<td>First Client’s name and mailing address?</td>
</tr>
<tr>
<td>~P0190G</td>
<td>Who is the client’s primary attorney?</td>
</tr>
</tbody>
</table>

**Step 4 – Create Supplemental Tokens in ProDoc**

If you are not using all global or volume tokens in your document, you must create supplemental tokens with corresponding questions. After creating the supplemental questions, enter them in the ProDoc database for use in your supplemental forms. From the toolbar in ProDoc, select Customize > Supplemental Forms and Questions > Supplemental Questions.

The Supplemental Questions browse window appears. This is where you add, change or delete supplemental tokens and questions. For our example, select New to create a new token and question. Next, select the volume and the Supplemental Questions dialog box appears.

There are several fields in the Supplemental Questions dialog box:

- **Token** - Enter the token for the question, omitting its leading tilde (~) and trailing "S". The token must start with a P. For the first token in our example, we would enter P0001 in the Token field, instead of ~P0001S. Note: you must use capital letters.
- **Question** - Enter the text of the question you want displayed to the user.
- **Size / Rows** - Enter the number of rows (lines) you want to allow for the answer to the question.
- **Columns** - Enter the number of columns you want in each row. The maximum number of columns allowed is 65 columns, which is the width of a normal page.

**Step 5 - Insert Tokens into your Supplemental Form**

Now, return to the open form in your word processor and replace each item of variable information with the applicable token you created or found for it. After doing so, the sample letter above would look something like the sample supplemental form shown in Figure 2.

**Figure 2 - Sample Supplemental Form**

```
~P0001S
~P0002S
~P0003S
~P0004S, ~P0005S ~P0006S
RE: ~P0007S
```
Dear ~P0008S:

Thank you for contacting our office and giving us the opportunity to review your ~P0007S claim.
This letter shall serve to confirm your appointment with attorney ~P0009S, on ~P0010S, at ~P0011S. If unable to attend this appointment, please contact me immediately at the below listed telephone number.
In order to review your claim thoroughly, please bring the following information, if available, with you to your appointment:
~P0012S
If you have any questions regarding this matter, please do not hesitate to contact our office. Your cooperation in this matter is appreciated.

Sincerely,

~P0013S

NOTE: If we chose to use the Global token ~P0190G rather than ~P0009S for the NAME OF ATTORNEY item, then we would replace the item in the form with ~P0190G rather than ~P0009S.

Step 6 – Save the Supplemental Form

Method 1 - Saving to an existing volume

Save your form in the subdirectory of the existing ProDoc volume to which you want to add the supplemental form. For example, a Microsoft Word user creating a letter to confirm a client’s appointment to be used in the Texas Litigation volume would save the form letter as C:\prodoc\txlit\ltr1.rtf.

NOTES:
1) You can find the subdirectory for any volume by selecting either "Edit volume list" or "Show installed volumes" from the Tools menu and the Registration submenu. "Edit volume list" also shows the complete pathname of the subdirectory if you highlight the volume and click Change.
2) Supplemental form filenames should be no more than eight characters long.
3) The filename you assign must either have no extension or an .rtf extension.
4) Save the supplemental form as file type Rich Text Format.

Method 2 – Saving to a newly created volume

Another way of saving supplemental forms is to create a volume with a name of your own choosing. In order to create the new volume, open ProDoc and click Tools > Registration > Edit Volumes List > New. In the title box type the desired title (e.g. Supplemental Forms). In the Subdirectory box type the name of your new volume (e.g. supforms). You will be asked if you want to create a folder with that name. Click Yes. You now have a supplemental forms volume to store your supplemental forms into. Note: Creating a central volume for your supplemental forms enables you to maintain one comprehensive set of supplemental questions instead of smaller repetitive sets of supplemental questions for each volume.

Step 7 - Adding your form in ProDoc’s database
Now that your newly created supplemental form has been saved in a volume's subdirectory or a newly created volume, you must add the form to the list of supplemental forms for that volume. Select Customize > Supplemental Forms & Questions > Supplemental Forms. This brings up the Volume Selection window. Select the correct volume in which to add the supplemental form. Once you have made your volume selection, the Supplemental Forms window will appear.

**Supplemental Forms Window**

The Supplemental Forms window contains a list of the supplemental forms currently in a volume. It contains New, Update and Delete buttons which let you add a supplemental form to the volume, change the filename and title of the highlighted form, and remove the highlighted form from the volume. You can also change the volume shown in this window with the Change Volume button. Select New to bring up the Supplemental Form dialog box.

**Supplemental Form Dialog Box**

This box contains two fields to fill in.

- **Filename** - Enter the filename for the form. This is the filename component under which you saved the supplemental form when you were in your word processor. For example, if you saved the form as C:\prodoc\txlit\ltr1.rtf, then the filename you would enter here would be ltr1.rtf.

- **Title** - Enter the title of the form (e.g. confirmation letter) exactly as you want it to appear in the Select Forms window and other windows. It should be descriptive to make it easy to find the desired form in a list.

**Step 8 - Test the Form**

After creating the form and adding the form and any new supplemental tokens to the database, you should generate a document to test the supplemental form. Start a document assembly session. When you arrive at the Select Forms window, select the volume for which you created the supplemental form, then select the Supplemental tab. This will display a list of all the supplemental forms in the volume. Select the form that you just created from that list in the same way as you select forms from the main forms list. After assembling a document from your newly created supplemental form, examine it to insure that the answers to the questions appear as expected.

**Appendix E - Backup and Restore**

**BACKING UP FILES**

Most people inadvertently delete files at one time or another. Hard disk drives can fail after extended use. To protect against such loss of data, you should make regularly scheduled backup copies of important data files to one of these forms of backup destinations:

- Removable media (diskette, writable CD, ZIP disk, data tapes, or a flash drive/thumb drive)
- Network drive on your office network (preferably to a server using a RAID disk storage subsystem)
- Off site data storage facility/data center

The ProDoc backup utility, at Customize → Options → Backup automatically creates a backup of all of your client data and case data, including case answers and links to existing documents.

If you run the SOS program and do your systematic backups from that program, all SOS billing and case management data is backed up, as well as the ProDoc program data listed above.

Due to the flexibility built into ProDoc, many other files containing modifications you may have made to your
ProDoc data files may exist. These modifications include document formatting changes; modified master forms; and supplemental volumes, forms, and questions.

The automatic back up features in the ProDoc and SOS programs do not back up these additional personalized files or your completed documents. For this reason, we strongly encourage you to perform additional systematic backups of your completed documents and any other modified or customized forms and documents you have created, in addition to using the automatic backup utility.

File Structure Planning

If you save the backup files in the same file structure used by ProDoc, it's much easier to restore correctly.

Perform these steps to set up the file structure on your backup drive:

1. Create a folder on your backup drive and name it ProDoc Backup Utility Files (For example: Z:\ProDoc Backup Utility Files\ProDoc, where Z represents the backup drive letter).
   a. Locate and copy the entire ProDoc installation folder (by default, c:\ProDoc) to this folder. This will work well as long as you have enough available space on your backup drive.
   b. Locate and copy the clients folder (by default, c:\Clients) to this ProDoc Backup Utility Files folder.

2. If you want to reduce the amount of drive space used on the backup drive, and make the restore process quicker, you can remove certain files from the folders you copied to ProDoc Backup Utility Files folder:
   a. In the copied backup folders named ProDoc and Clients, highlight and delete all individual files in the folders.
   b. Open each individual subfolder, and delete all individual files in each one. Don’t delete the folders themselves.
   c. You should only have empty file folders when you are finished. This file structure will help save drive space and make the restore process quicker.

Backup Procedure

If you set up a file structure as described above, the steps in this section will help you ensure that any new ProDoc installation will operate in the same manner as your old installation. Note: SOS users should set up backups through SOS instead of ProDoc to preserve billing and case management data along with client/case data.

Perform these steps to back up your ProDoc data files:

1. Click Customize \ Options \ Backup to configure the needed settings.
   a. Check the Auto Backup at exit box and set the Days between backups number (we recommend using 0 to always backup when you exit ProDoc).
   b. Click the Station triggering automatic backups field and select the login name or initials of a user who uses ProDoc on a daily basis.
   c. In the Backup folder field, enter the drive letter and folder names you used in step 1 under File Structure Planning, (For example: Z:\ProDoc Backup Utility Files\ProDoc, where Z represents the backup drive letter). Click OK to save your changes.

2. Back up your completed document folders to your backup drive every day, or any time you create/update documents. If you use the default document locations, copy the c:\Clients folder to your backup drive. If you save documents elsewhere, back up the appropriate folders, preferably to the same location or folder on the drive relative to your ProDoc installation folder.

If you are sure you haven’t modified ProDoc, you can stop here. If you have modified document formatting or forms; or created supplemental forms, questions, or forms sets; continue to Step 3. You
need to back up these files.

3. Perform the following steps once, then do them again any time a user changes formatting, modifies a form, updates supplemental forms/questions or creates/modifies a form set.

a. In the installation directory (by default, \ProDoc), copy any files named xxxgcfg.ini (xxx represents user login name or initials) to Z:\ProDoc Backup Utility Files\ProDoc where Z represents the backup drive letter. Do the same with the global.cif file if it exists.

b. In each subfolder of the installation directory, locate the following files and copy them to the same folder name on your backup drive:
   1. Any files with the extensions .doc, .wpd, .wp, .cif, or .ini.

To make the ProDoc installation work correctly, these files must all be copied to the same folder location on the backup drive relative to their folder location in their original drive.

Follow the steps in the following section, Restoring from a Backup whenever it becomes necessary to restore files from the backup you have made.

RESTORING FROM A BACKUP

Like backing up files, restoring is a matter of specifying what, when, where, and how. You probably chose to restore data files because your hard disk was replaced or reformatted, or perhaps you have reinstalled the ProDoc document assembly program (and perhaps the SOS program as well). Here is what you can expect out of your new installation depending on what was previously backed up, from the least effective to the most effective backup routines:

1. If you have only used the backup utility from ProDoc or SOS, your client, case and document listing will be restored and your case answers will also be restored. You will need to reassemble your documents, and any modifications or additions to forms will not be made to the documents unless you re-enter the modifications before reassembling. Any changes to documents made through your word processor and saved will not be included.

2. If you also backed up your completed documents, these will be available as before.

3. If you used the backup utility from ProDoc or SOS, and also backed up your completed documents and any modified files, your new installation will basically operate exactly as it did before.

If you used a commercial backup program to do your backups, you should follow the program's instructions as well as those below. The steps in the following procedure assume you use the Windows Explorer program to locate and copy the backed up files.

Restoring Backed up Data Files.

This procedure assumes that the ProDoc program (and the SOS program, if subscribed to) was successfully installed from a CD. If you encountered problems during this installation process, call Customer Support at 1-800-759-5418 for help.

Perform the following steps to restore your backed up data files.

1. Restore files backed up with the ProDoc or SOS backup utility.

   a. If you don't use SOS: In ProDoc, Click Tools → Backup Data Files → Restore.
      i. If you are using a network installation, ensure no other users are logged in and click Yes on the warning window. If ProDoc is not networked, click Yes on the warning window.
      ii. Click Restore on the next warning window.
      iii. Enter the location of the backup files in the Files to Restore Location window. Click OK.
Your client, case and document list will be restored.

b. ProDoc and SOS users: Perform these steps in SOS if you performed backups through SOS:
   i. Click **Utilities → Back up data files → Restore data files.**
      ii. Enter the backup file location on the **Files to restore location** window. Click OK. Your data files will be restored for both ProDoc and SOS.

2. If you backed up your **completed documents**, locate the backup folder location.
   a. Users who used default document locations can then copy either the C:\Clients folder to the ProDoc installation directory, C:\ProDoc if installed to the default location on a stand-alone computer, or copy all backup folders named after clients to the Clients folder in the ProDoc installation folder. If you see a warning about overwriting existing files, confirm that these should be overwritten. Your backed up documents will then be restored.
   b. Users who did not use default document locations should copy the backup document folder(s) to the same location on the drive in which these were placed before. Your backed up documents will then be restored and can be accessed through the **Clients & Cases Document Manager** if they are restored to the same location.

3. Users who modified document formatting or master forms, or created supplemental forms and questions should locate and restore these files. If nothing was changed or not backed up, you can skip this step.
   a. If you used the steps under **Backup Procedure** in the **Backing Up Files** section, you backed up the following files:
      i. In the ProDoc installation directory (by default, C:\ProDoc): Any existing xxxgefg.ini files (xxx is each user’s login initials/name) and Global.cif.
      ii. In each volume folder: Any files with the extensions .doc, .wpd, .wp, .cif or .ini and any files named Docgrps.tps, grpitems.tps, Sdocs.tps, SLogic.tps and SAuto.tps.
   b. Copy these files and all volume folders to the ProDoc installation directory and overwrite existing files.
   c. If you have created and backed up any supplemental volumes, you must place these back on the volume listing. Click **Tools → Registration → Edit Volume List** and add the information required for the supplemental volume(s).

4. If you didn’t do so before, set up a backup routine as described in the topic **Backing Up Files**

Your latest ProDoc installation should now run as it did before. If you encounter problems during this process, call Customer Support at 800 759-5418 for help.
